Subject: Deep Aquifer Bedrock Well Design and Long-Term Monitoring Update – Quarterly Deep Private Well Update (April-July 2025)
Tyco Fire Technology Center, Marinette, WI
BRRTS# 02-38-580694

Dear Ms. Sellwood,

On behalf of Tyco Fire Products LP (Tyco), Arcadis U.S., Inc. (Arcadis) prepared this Quarterly Deep Private Well Update in response to the Wisconsin Department of Natural Resources (WDNR) letter dated November 17, 2023. The November 2023 WDNR letter commented on the submittal of a quarterly private deep bedrock well update starting in February 2024 and lasting through the final deep well installations.

To fulfill the WDNR request, Arcadis is providing the current private deep bedrock well installation status update regarding the Potable Well Sampling Area (PWSA). This includes the information requested within the November 2023 WDNR letters.

Tyco continues to investigate per- and poly-fluoroalkyl substances (PFAS) potentially related to the Tyco Fire Technology Center located at 2700 Industrial Parkway South in Marinette, Wisconsin (the Site; **Figure 1**).

Continued Efforts For Deep Replacement Potable Wells

Tyco continues to install private deep bedrock wells as a drinking water solution for neighbors that request to participate in the program. As of the end of July 2025, Tyco had successfully completed deep bedrock replacement wells for 125 private wells (**Figure 2)** and has agreements to install 13 additional deep bedrock replacement wells. The sampling status of the new deep replacement potable wells is included in **Table X.4**. Copies of the letter notifications provided to residents with their results are sent separately to the WDNR via email. All data provided to date continue to support deep wells as a permanent drinking water solution for the PWSA.

It is anticipated that Tyco will submit the Final Interim Action Report for these private deep bedrock wells by October 1, 2025, as previously requested by the WDNR in both their letter(s) dated November 17, 2023 and October 24, 2024. If following the submission of said report additional private deep bedrock wells are installed and sampled, an addendum to the Final Interim Action Report will be submitted to the WDNR on a quarterly basis similar to the update provided herein.

Sincerely,
Arcadis U.S., Inc.

Matt Coleman

Notes:

1 = retrofit liner consists of a 4-inch steel liner that has been grouted in place to a depth of approximately 300 feet below ground surface within the existing deep well (Arcadis 2023. Deep Aquifer Bedrock Well Design and Long-Term Monitoring – Interim Response Status Update. August).

2 = Well WS-121A was abandoned and the structure previously serviceed by it was connected to replacement well WS-121BR. WS-121BR supplies 2 separate structures on the property, however both structures have individual treatment systems. WS-121A is tracked as sampling occurs from its treatment system under sample ID 'WS-121BR_RO'.

Orange indicates new data point (well replacement or sample) since the previous quarterly report submittal.

Acronyms and Abbreviations:

-- = not applicable
ft bgs = feet below ground surface
ID = identification
N = no
Y = yes
