Colin,

We intend on submitting the excavation report by the end of this month. We are also preparing the case closure submittal, but will not submit until you have reviewed the excavation report. Please note that the email for the owner is gaolson@netnet.net. They are no longer using the olsonoil@netnet.net email.

What a glorious weekend it was! Hope yours was enjoyable.

Tim

Good morning Tim and Nick,

I am checking in with you both to get the status of the First St site in Pulaski. Last we spoke I believe your plan was to submit the excavation documentation report and submit for closure. Where are you at with preparing these reports? Please provide me with a timeline for getting the excavation documentation report submitted. We can talk about closure after that documentation report is submitted.

I do have some comments and questions for you to consider when preparing the excavation documentation report and moving forward at this site:

- On the map submitted with your 3/2/2022 submittal, there are soil borings labeled GP-14 and GP-15. TW-5 is also shown at the GP-15 location. Were soil and groundwater samples collected at these borings/temp well?
- Include soil boring logs and well construction logs for borings/wells installed post-excavation in the documentation report.
- Emerging contaminants scoping is still needed for this site.
- Assess if you have a clean upgradient monitoring well.

I hope you have a nice weekend and can enjoy this last hoorah of summer!

Regards,

-Colin
