Additional Comments

June 28, 2007 Wisconsin Department of Natural Resources Hazardous Spills Coordinator Attn: Jason Moeller P.O. Box 10448 Green Bay, WI 54307-0448 Subject: Hazardous Waste Incident 6/20/2007. Dear Mr. Moeller, Please review the summary of the events of the incident indicated at the above date. If you need any additional information please contact me. Thanks. At approximately 2:10 p.m. the plant was notified by the Neenah/Menasha Police Department that the truck hauling our hazardous waste shipment to RINECO (Arkansas) was stopped. According to the report from the driver and police department the following occurred: The truck carrying the hazardous shipment departed at approximately 1:45 p.m. The driver was en route to U.S. 41 south. While in transit, he was flagged down by fellow drivers and by standers that something was happening with the rear of his truck. He pulled over to inspect, and noticed the leak. He turned the truck around and proceeded to attempt to return to the plant. When he reached downtown Neenah, he was pulled to the east side of Commercial street by Neenah police department. Upon inspection, one of the barrels, #144 (Flexo ink); composition of propanol, propyl acetate was leaking from the bottom of the barrel. The police asked that a barrel cap, (outer containment), be applied so that the leaking barrel could be transported. The leak appeared to be coming from the bottom of the barrel. The police supervisor (Dan Schultz) appraised Brian Ziegert (maintenance supervisor) and I of the disposition of the situation stating there would a traffic citation in the $200-300 range for a leaking non secured load. He stated that between 25-30 gallons leaked out of the barrel before it could be controlled. Also, he stated that the DNR office was notified and information they received that given the contents and volume of the leak that there would no on site inspection or testing. The police strongly suggested that once the cap was on the barrel and the oil dry with mixed ink from the curb was placed in the cap that the load is returned to the plant for off load, re-inspection before initiating transport. The load was returned all containers off loaded, re-inspected and the truck departed at approximately 5:45p.m. Sincerely, John Liddicoat EHS Manager Alcan Packaging-Menasha 271 River Street Menasha, WI 54952

Subject: Hazardous Waste Incident 6/20/2007.

Dear Mr. Moeller,

Please review the summary of the events of the incident indicated at the above date. If you need any additional information please contact me. Thanks.

At approximately 2:10 p.m. the plant was notified by the Neenah/Menasha Police Department that the truck hauling our hazardous waste shipment to RINECO (Arkansas) was stopped. According to the report from the driver and police department the following occurred:

The truck carrying the hazardous shipment departed at approximately 1:45 p.m. The driver was en route to U.S. 41 south. While in transit, he was flagged down by fellow drivers and by standers that something was happening with the rear of his truck. He pulled over to inspect, and noticed the leak. He turned the truck around and proceeded to attempt to return to the plant. When he reached downtown Neenah, he was pulled to the east side of Commercial street by Neenah police department.

Upon inspection, one of the barrels, #144 (Flexo ink); composition of propanol, propyl acetate was leaking from the bottom of the barrel. The police asked that a barrel cap, (outer containment), be applied so that the leaking barrel could be transported. The leak appeared to be coming from the bottom of the barrel. The police supervisor (Dan Schultz) appraised Brian Ziegert (maintenance supervisor) and I of the disposition of the situation stating there would a traffic citation in the $200-300 range for a leaking non secured load. He stated that between 25-30 gallons leaked out of the barrel before it could be controlled. Also, he stated that the DNR office was notified and information they received that given the contents and volume of the leak that there would no on site inspection or testing.

The police strongly suggested that once the cap was on the barrel and the oil dry with mixed ink from the curb was placed in the cap that the load is returned to the plant for off load, re-

inspection before initiating transport. The load was returned all containers off loaded, re-inspected and the truck departed at approximately 5:45p.m.
