Subject: Soil Disposal

John,
I am following up on the hydraulic oil spill that was discovered at Louisiana-Pacific's Tomahawk mill on 5/7/15. The hydraulic oil contaminated soil generated as a result of this spill (5028 lbs) was transported to the Lincoln County Landfill's biopile facility earlier this afternoon.

If you have questions or need additional information please contact me. Thank you for your assistance with this project.

Subject: Hydarulic Oil Spill Follow-up
Attachments: Hyd Oil Spill Pics - 050715.xlsx

John,
I am writing this as a follow-up to our previous phone conversation regarding the hydraulic oil spill that occurred at Louisiana-Pacific's Tomahawk facility on 5/7/15.

On 5/7/15 at approximately 2:45 pm, an equipment operator in our log yard discovered a spill of hydraulic oil in Log Yard A that apparently originated from a failed hydraulic line on a log truck. The operator did not witness the spill and the spill had not been previously reported to LP personnel. The log yard operator contacted the shift supervisor and clean-up activities were initiated. We are estimating that 25 gallons of oil was released.

Soil and gravel were excavated until all visual evidence of oil was removed. The excavation extended to an approximate depth of 6 inches. I have attached 2 pictures (taken the day after clean-up activities were completed) which illustrate the area of the spill. Approximately 6000 lbs of soil / gravel were excavated, placed on a concrete surface, and covered. Following receipt of proper approvals, the soil will be transported to the Lincoln County Landfill's biopile facility. I will provide documentation of proper disposal once it has been completed.

Please let me know if have questions or require additional information. Thank you

Brett Beaumier
