Subject: RE: Southern Riverfront Cap Sample Summary

Hi Evan,

DNR has reviewed the cap sampling results submitted on March 25, 2022, and concurs that the cap placed on the site is protective. Detections of PAHs above the non-industrial direct contact RCLs at HA-8 and HA-12 are not a concern because they do not exceed cPAH direct contact hazard risk. Detections of PAHs at HA-10 (0-1.5' bgs) above the industrial direct contact were not confirmed in sample HA-13 (0-1' bgs). DNR concurs that HA-10 is likely within an area that the cap is less than 18" deep and the sample from 0-1.5' contained underlying contaminated soil. No additional sampling of the cap is required.

Thank you,
Josie

Subject: Southern Riverfront Cap Sample Summary

CAUTION: This email originated from outside the organization.
Do not click links or open attachments unless you recognize the sender and know the content is safe.

Good morning Josie,

Attached please find the summary of the cap sampling that was completed at the Southern Riverfront Redevelopment site (BRRTS: 02-05-520114; VPLE: 06-05-280631) in the Village of Ashwaubenon. Based on the results of the sampling event, we are seeking concurrence that the capping materials onsite are satisfactory per the VPLE requirements.

Please let us know whether you would prefer us submit this via the portal or if this email will suffice.

Of course also please let us know if you have any questions.

Have a nice weekend!
