September 25, 2007

Request for Change Order at the former Rowe Oil Site; Franksville, WI

Description/reason of change: Change order required due to the estimated underground storage tank size and volume of waste contained in each underground storage tank being greater than estimated in RFP.

- **Tank H** (listed in RFP as 10,000 gallon tank and 21 feet in length) Actual size 12,000 gallon tank and 34 feet in length. Contained approximately 1,300 gallons of sludge
- **Tank I (**listed in RFP as 12,000 gallon tank and 21 feet in length) Actual size 12,000 gallons and 34 feet in length. Contained approximately 1,500 gallons of sludge
- **Tank J** (listed in RFP as 8,000 gallon tank and 21 feet in length) Actual size 12,000 gallons and 34 feet in length. Contained approximately 1,300 gallons of sludge.

Due to the increase size of the two of the underground storage tanks (USTs) and the excess volume of solids/sludges contained in all USTs over the estimated amounts in the RFP, additional labor, equipment, and supplies were require to complete the tank cleaning activities.

Total overage: $6,270.00

Menomonee Falls, WI 53051
tel: 262-255-6655 - fax: 262-255-5794
www.VeoliaES.com

Due to the increased size of the excavation after the USTs were removed additional backfill material was required.

Total overage: $825.00

Due to the increased size of two of the tanks (H,J) additional time was required to cut and size the material to be hauled off-site.

Total overage $715.00

TOTAL CHANGE ORDER AMOUNT $7,810.00
