FERC Project No. 1981

Re: FERC Project 1981 Article 404 Water Quality Monitoring Report

Dear Secretary:

As per Article 404 of the Order Issuing New License for the Stiles Hydroelectric Project (FERC Project No. 1981) dated February 26, 2003, Oconto Electric Cooperative (OEC) submitted its Water Quality Monitoring Plan. The Plan was approved by letter from the FERC dated September 11, 2003. One of the requirements of the Plan was that a report be filed every five (5) years with the Wisconsin Department of Natural Resources and the US Fish and Wildlife Service detailing the results of the monitoring.

The next scheduled monitoring period is scheduled for 2021.

If you have questions about this report, please contact me at 1-800-472-8410 extension 1017.

Sincerely,

Kent A. Lyng
Oconto Electric Cooperative

Attention: Mr. Kent A. Lyng
Oconto Electric Cooperative
Post Office Box 168
Oconto Falls, WI 54154

Dear Mr. Lyng,

**Reference: Stiles Hydroelectric Dam, FERC 2016 Water Quality Monitoring
Oconto County, Wisconsin**

Stantec Consulting Services Inc. (Stantec) was contracted by Oconto Electric Cooperative (OEC) to perform water quality monitoring on the Stiles Hydroelectric Dam. The water quality monitoring was conducted to determine if Federal Energy Regulatory Commission (FERC) water quality standard regulations are being achieved in the discharge downstream of the dam. Water temperature, dissolved oxygen (DO) and pH data were collected on an hourly basis (24 measurements per day, per location) from June 1, 2016 through September 8, 2016 using portable, water quality monitoring equipment. The data was collected at two sites along the Oconto River, one located upstream of the Stiles dam and the other located downstream of the dam. The following report details the results of the water quality monitoring.

The Wisconsin Department of Natural Resources (WDNR) has classified the Oconto River immediately downstream of the Stiles Hydroelectric Dam as a warm water sport fish community and therefore must be monitored per FERC guidelines to ensure sustained water quality. FERC regulates that for warm water fish the water temperature must not exceed 89° F, dissolved oxygen (DO) concentration must not be less than 5.0 milligrams per liter (mg/L) and that pH must be within the range of 6.0 to 9.0 with no change greater than 0.5 units outside the estimated natural seasonal maximum and minimum.

METHODS

Oconto Electric requested that Stantec staff utilize the two existing monitoring points to complete the water quality surveying. The point upstream of the dam is located on the southern inflow wall of the hydroelectric dam. The second monitoring well is located on the south bank of the Oconto River approximately 500 feet downstream of the dam. The monitoring points consisted of 4-inch diameter PVC approximately 15 feet in length. A figure showing the locations of the two monitoring stations is included in Attachment A.

The monitoring equipment used for this project was two YSI EXO1 portable Sondes. The Sonde units recorded data electronically on an hourly basis throughout the monitoring period. In compliance with FERC parameters, the monitoring equipment was calibrated for pH and conductivity prior to initial deployment in June 2016. The Sonde units used for this project do not need to be calibrated for DO once the initial calibration is complete.

Reference: Stiles Hydroelectric Dam, FERC 2016 Water Quality Monitoring, Oconto County, WI

The two Sondes were initially calibrated on May 23 and June 6, 2016 before the water quality monitoring began. Each unit was subsequently calibrated on July 7, 2016 and again on August 15, 2016. Calibration worksheets for each unit are included in Attachment B.

Data from each of the two sondes was downloaded every 10-14 days throughout the monitoring period. Upon completion of the monitoring, collected data was processed and analyzed using YSI KOR-EXO software. The final post processed data was summarized in tables and graphs presented in Attachment C.

RESULTS

The recorded temperature upstream of the dam displayed a mean of 74.93°F with a high temperature of 83.57°F and a low temperature of 59.14°F. The median temperature upstream of the dam was 74.83°F and the mode was 74.28°F. The mean temperature recorded downstream of the dam was 73.96°F with a high of 81.23°F and low of 62.11°F. The median temperature downstream of the dam was 73.97°F and the mode was 76.71°F. None of the monitoring results for either upstream or downstream were above the maximum allowed temperature of 89°F.

The mean pH level upstream of the dam was 7.79 with a median pH level of 7.77 and a mode of 7.76. The highest pH level recorded upstream of the dam was 8.30 and the lowest was 7.08. The mean pH level downstream of the dam was 8.07 with the median being 8.07 and the mode 7.98. The highest pH level recorded downstream of the dam was 8.66 and the lowest was 6.02. All the recorded pH levels for upstream of and downstream of the dam fall within the FERC regulation levels of 6.0 to 9.0.

The mean DO concentration upstream of the dam was 5.22 mg/L. The median and mode DO concentrations upstream of the dam were 5.13 mg/L and 4.87 mg/L with a high of 9.77 mg/L and a low of 1.51 mg/L. The mean DO concentration downstream of the dam was 8.02 mg/L with a median and mode of 8.06 mg/L and 8.51 mg/L. The highest DO concentration recorded downstream of the dam was 11.21 mg/L and the lowest was 5.66 mg/L. Deviations in the DO readings are discussed in more detail below. Refer to the data summary and graphs presented in Attachment C for additional information.

The data above is summarized in the following table:

Location	Temperature Mean	High Temperature	Low Temperature	pH Mean	High pH	Low pH	DO Mean	DO High	DO Low
Upstream of the Dam	74.93°F	83.57°F	59.14°F	7.79	8.30	7.08	5.22 mg/L	9.77 mg/L	1.51 mg/L
Downstream of the Dam	73.96°F	81.23°F	62.11°F	8.07	8.66	6.02	8.02 mg/L	11.21 mg/L	5.66 mg/L

Temperate and pH water quality data collected during the monitoring period fell within the FERC water quality license guidelines for the upstream and downstream data points. Dissolved oxygen (DO) concentrations at the monitoring station below the dam also fell within the FERC guideline of 5.0 mg/L for the entire monitoring period. However, DO concentrations at the monitoring location above the dam fell below the specified limit for most of the monitoring period. Low DO levels (i.e. <5 mg/L) were recorded on 76 monitoring days from June 11 through September 8 upstream of the dam. Of these 76 days, only three days were out of compliance for less than 3

Mr. Kent A. Lyng
Page 3 of 4

Reference: Stiles Hydroelectric Dam, FERC 2016 Water Quality Monitoring, Oconto County, WI

hours, which may suggest anomalous readings. The remaining 73 days showed the DO measurements out of compliance for 3 or more hours. These low DO levels in the flowage above the dam can be correlated to an increase in water temperature and an overall low water quality that was recorded by Wisconsin Department of Natural Resources. Likely contributors to the low DO levels above the dam include:

- WDNR documented a large algae bloom in late June and also late August. These blooms likely contributed to the low DO levels.
- The DO data summary shows significant diurnal variations in the DO above the dam. This indicates the presence of algae in the flowage.
- High chlorophyll a measurement (mean of 5.3 mg/L from June 18 through August 21, 2016). These values verify the presence of significant algae within the flowage.
- High phosphorus measurements (mean of 40.0 ug/L from May 22 through August 21, 2016). This is likely the main cause of the high chlorophyll a and algae issues within the flowage.
- A 2016 trophic state index (TI) showing a Eutrophic state within the flowage.
- Above average precipitation during June, July, and August. This above normal precipitation increases the impacts of non-point source inputs from the watershed.
- Industrial discharges from facilities upstream of the flowage. These inputs also contribute to the high nutrient input and subsequent high algae and chlorophyll a values within the flowage.

WDNR data was obtained at:

<https://dnrx.wisconsin.gov/swims/public/reporting.do?type=10&action=post&stationNo=433123&year1=2016&format=html>

This increase in water temperature coupled with high nutrient loading in the flowage would be expected to decrease DO. DO readings in mid-summer may also have been impacted by the location of the monitoring device. The upstream monitoring location is in close proximity to the dam, which draws its discharge water from the surface water of the flowage. Since the probe is located only a few feet below the water surface, stagnated and warm water could collect directly adjacent to the dam in low flow conditions; thereby reducing DO concentrations.

CONCLUSIONS

Temperate and pH water quality data collected during the monitoring period fell within the FERC water quality license guidelines for the upstream and downstream data points. DO concentrations for the monitoring station below the dam also fell within the FERC guidelines. DO concentrations above the dam fell below the FERC guideline for most of the monitoring period. Potential causes of the low DO readings in the flowage include algae blooms, high total phosphorous and chlorophyll a concentrations and discharges from industrial facilities, agricultural run-off and high aquatic plant growth.

Concentrations of DO downstream of the dam were typically linked to the DO concentrations within the flowage, however they were never below the FERC guideline. Overall with the exception of the DO concentrations above the dam, water quality measurements were in compliance with the FERC guidelines for the monitoring period.

We trust this information meets your needs. Thank you for the opportunity to work on this project. If you have any questions, please feel free to contact John Wiater at 920-592-8400 or john.wiater@stantec.com.
