

Wisconsin Department of Natural Resources SWIMS Project Summary

General Project Information

Project ID: GLRI_00E00489-0

Name: Sheboygan AOC Pathway to Delisting Habitat BUI's - Survey and Assessment

Type: Great Lakes Restoration Initiative

Subtype: Toxics and Areas of Concern

Status: ACTIVE

Start Date: 10/01/2010

End Date: 12/31/2099

Purpose: The lower Sheboygan River and Harbor were designated a Great Lakes Area of Concern (AOC) in 1985 by the International Joint Commission (IJC). This AOC encompasses the lower river downstream from the Sheboygan Falls Dam including the entire harbor and nearshore area of Lake Michigan. In the Sheboygan River, it is suspected that high levels of nutrients, solids, and toxic chemicals along with land use changes have contributed to the degradation of animal and plant populations and the reduction in fish and wildlife habitat and populations. Two of the Nine Beneficial Use Impairments (BUIs) identified for the Sheboygan River and Harbor AOC include:

- degradation of fish and wildlife populations
- loss of fish and wildlife habitat

Objective: This project is intended to support the development of delisting strategies and a fish and wildlife population and habitat restoration plan to address the fish and wildlife population and fish and wildlife habitat beneficial use impairments for the Sheboygan River and Harbor Area of Concern. This project includes a rapid ecological assessment using historical and current data, as well as conducting new field surveys, as needed, to fill data gaps or update data needed for the assessment. This project is part of an overall collaboration with the Sheboygan River Basin Partnership who is also seeking a grant from the Great Lakes Restoration Initiative under the same project name.

Comments: \$202,181

Time Line: Funds are anticipated to be available July 1, 2010. DNR Project is to be completed by July 1, 2012.

July 2010 to April 2011. DNR Review of historical and current data. This will help guide DNR field survey work and contribute to the development of the ecological assessment.

January 2011 to October 2011. DNR Field Surveys - initial findings available by January 1, 2012. Final ecological assessment report will be completed by June 30, 2012.

January 2012 to December 2012. Work with SRBP Fish & Wildlife Technical Advisory Committee to develop fish and wildlife habitat and population BUI delisting strategies and restoration plan. Plan to be finalized by SRBP in December of 2012.--NOTE: THIS PART OF THE PROJECT WAS NOT FUNDED.

Outcome: The end goal is for all of the Great Lakes Areas of Concern to be restored and protected so that they can be delisted, or removed from the list of 43 AOCs within the Great Lakes. This proposal is intended to support a comprehensive restoration planning project with the Sheboygan River Basin Partnership (SRBP). The information supplied and collected by DNR staff will be used to develop a strategy for delisting the fish and wildlife beneficial use impairments (BUIs) in the Sheboygan River and Harbor AOC. The data from the field surveys will be finalized within an ecological assessment report for the Sheboygan AOC. Outputs include field survey data reports and an ecological assessment report for the Area of Concern. This information will be used to further refine specific delisting targets for fish and wildlife habitat and populations along with development of a comprehensive AOC fish and wildlife habitat restoration plan.

Project Statuses

Date	Reported By	Status	Comments
12/21/2010	DONALEA DINSMORE	Active	Interim approval for Wintering Bird Survey field work granted - Donalea Dinsmore
12/31/2010	LAUREL LAST	Progress: 0-25% Cor	Project is underway. Please see project status details.
03/31/2011	LAUREL LAST	Progress: 0-25% Cor	Project is underway. Wintering bird surveys completed. Wadable macroinvertebrate samples collected and at lab for analysis. Northern pike surveys initiated. Contractors hired for herptile and breeding bird surveys. Survey protocols and QAPP almost complete. QAPP requires some minor adjustments. Problems Encountered: EPA's desire for expedited delisting affected the scope and objectives of this project.
06/30/2011	LAUREL LAST	Progress: 25-50% Cor	Project is underway. Wintering bird surveys completed. Wadable macroinvertebrate samples collected and at lab for analysis. Northern pike surveys completed. Fish community, herptile, breeding bird, bat, natural community / rare plant / invasive plant, and kingfisher nest surveys initiated. QAPP almost complete--requires some minor adjustments for approval. Problems Encountered: High Sheboygan River flow made northern pike netting difficult. Shallow depths and rocks in upper portion of AOC made bat survey difficult and dangerous (will not be canoeing that section again).
09/30/2011	LAUREL LAST	Progress: 50-75% Cor	Project is underway. All field work is complete except for mussel surveys and mink trapping efforts by professional mink trapper. Herptile survey final reports complete. All other segments of project require at least some data analysis and interpretation before the information is incorporated into the final project report. QAPP has been submitted to EPA, review comments received, and response submitted to EPA--awaiting final QAPP approval. Problems encountered: Small mammal survey could not trap all the species planned--had to modify sampling design.
12/31/2011	LAUREL LAST	Progress: 50-75% Cor	Project is underway. Mussel surveys and report are complete. About 28 days of mink trapping completed. The only field work remaining is some additional trapping for mink and weasels. No small mammal or mink samples have been sent to the lab for analysis yet. Additional data entry, analysis, and report writing occurred this quarter, but more needs to be done before information is incorporated into the final (Ecological Assessment) report. QAPP has been approved by EPA and distributed. Problems encountered: Mink trapping was made more difficult by

Wisconsin Department of Natural Resources SWIMS Project Summary

Date	Reported By	Status	Comments
			fluctuating water levels and high numbers of raccoons. Also, Rich Staffen will be taking over Christina Isenring's roles in this project, since she has taken another position.

Project Status Detail

Question	Answer
1. Reporting Timeframe (Q1) (Q2) (Q3) (Q4):	Q5
2. Amount expended this reporting period:	<p>Dollars spent:</p> <p>--Fish: \$389.63 (supplies/fringe). --Macroinvertebrates and Fish Habitat: \$15.50 (mileage). --Mussels: \$3,000 for mussel assessment (contract awarded Q4). --Small Mammals and Mink: \$653.33 (mostly vehicle miles w/ some trapping supplies). --All other segments of project: \$0 spent.</p> <p>LTE hours used:</p> <p>--Fish: 24 LTE hours. --Wildlife (mostly Small Mammals and Mink): 88 LTE hours (about \$1,133). --QAPP and Project QA: 11.25 LTE hours. Total hours to date = 378.75 out of 200 hours set aside from Watershed LTE hours. Went over budgeted watershed LTE hours, so used another funding source for remaining project QA work. --All other segments of project: 0 LTE hours used.</p>
3. Subcontracts or subgrants awarded this reporting period:	--All segments of project: 0 subcontracts awarded this quarter. Note that a mink trapper performed work for the Small Mammals and Mink segment of the project for no pay.
4. QAPP (Project Plan) status:	<p>QAPP Status: Received final QAPP approval from EPA and distributed final QAPP. Conducted fourth quarterly project update meeting (combined with Sheboygan AOC TAC meeting). Entered fourth quarterly report into SWIMS database.</p> <p>Still remaining: Complete remaining quarterly meetings and reports and perform QA/QC support and reporting as needed.</p> <p>QA activities:</p> <p>Corrective Actions: Sampling design for Mink survey will be modified somewhat due to field conditions. Mink trapping was made more difficult by fluctuating water levels and high numbers of raccoons, and only 3 mink were captured. LTE time will be put into trapping weasels and possibly additional mink in order to provide more samples for contaminants analysis.</p> <p>All other segments of project: Only routine QA activities (data review and verification). No problems encountered that required corrective actions.</p>
5. Local services and/or products purchased this reporting period:	--Small Mammals and mink: Minimal trapping supplies.
6. Number of jobs created this reporting period:	--All Other Segments: No local services or products purchased. --All Segments: No jobs created.
7. Work accomplished this reporting period:	--Fish: Started fisheries report. --Macroinvertebrates and Fish Habitat: Submitted last macroinvertebrate sample for analysis. Entered all available data into appropriate

Wisconsin Department of Natural Resources SWIMS Project Summary

Question

Answer

databases and started data analyses.
 --Herptiles: None (contract complete.)
 --Breeding Birds: Began analysis of breeding bird survey data (DNR).
 --Mussels: Completed mussel surveys and submitted final report (contractor).
 --Bats: WI Bat Monitoring Program (bat ecologists) reviewed and processed bat data.
 --Natural community / rare plant / invasive plants: Started data analysis for natural community / rare plant / invasive plant surveys.
 --Wintering Birds: No work performed.
 --Kingfisher Nests: Began data analysis and summary of Belted Kingfisher nest monitoring.
 --Small Mammals and Mink: Began mink trapping (26 days of trapping, including 17 days in AOC area and 24 days in control area). Made landowner contacts and secured access for trapping, provided assistance and information to volunteer mink trapper, and coordinated mink carcass collection with mink trapper. Input data from small mammal trapping and began data summaries.
 --Ecological Assessment Report: No work performed.

Problems Encountered:

Mink trapping was made more difficult by fluctuating water levels and high numbers of raccoons, especially in the AOC (Kohler) area. Christina Isenring, the Natural Community / Rare Plant / Invasive Plant Survey Project Leader and Ecological Assessment Team Leader, has taken another position and is no longer involved with this project. Rich Staffen, who was already on the project team, has taken over these roles.

8. Work goals for coming reporting period:

--Fish: Prepare final fisheries report.
 --Macroinvertebrates and Fish Habitat: Receive lab results for final (non-wadeable) macroinvertebrate sample. Prepare final report(s) for macroinvertebrates and fish habitat.
 --Herptiles: None (contract complete).
 --Breeding Birds: Complete analysis of breeding bird survey data (DNR).
 --Mussels: None (contract complete).
 --Bats: WI Bat Monitoring Program (bat ecologists) to interpret bat data for Ecological Assessment report (no separate report).
 --Natural community / rare plant / invasive plants: Complete data analysis for natural community / rare plant / invasive plant surveys (data interpretation in Ecological Assessment report).
 --Wintering Birds: Complete data summary/report for wintering bird surveys.
 --Kingfisher Nests: Complete data analysis and summary of Belted Kingfisher nest monitoring.
 --Small Mammals and Mink: Complete data summary/report for Small Mammal Collection. Complete Mink/Weasel trapping efforts and summarize data. Send all samples to WSLH for contaminants analysis.
 --Ecological Assessment Report: Establish working group (Ecological Assessment Team); gather and review historical data, recent data, and reports from new surveys; write draft report; have working group and Technical Advisory Committee (TAC) review draft report; and then write and submit final report.
