5. Additional Information. (Space will expand to fit your text.)					
The Landowner was stacking manure next to a pond/lake. rather than installing a stakcing pad the landowner chose to move his stacking pad to a location that was shelter using existing infrastructure >1000 feet from surface water.					
6. Summary of Project Challenges. (Space will expand to fit yo	ur text.)				
This site was challenging due to the location of the lot to the pond. the site and lot must also be used as wagon loading staging area in the fall because the landowner provides wagon rides, pumkin patch, corn maze activities in the fall. The combination of these two issues limited the types of functional BMP wich could be installed. Landowner chose to go route of making some management changes and dealing with clean water diversion work, to reduce the P/loading at a lower cost.
