REI PROJECT #9640A

1.0 EXECUTIVE SUMMARY

The subject property is currently developed with one (1) single store slab on-grade commercial structure, constructed in 1992, utilized for office space. Historically, the eastern portion of the property along Grand Avenue contained multiple small, conjoined structures utilized for a variety of residential and small commercial uses. Fill materials appear to have used to raise the grade of the central and western portion of the subject property and properties to the north and south between approximately 1950 and 1980. Fill materials placed along the Grave Avenue corridor to the north of south of this property around the same period are assumed to be from the same source.

The release was identified during the completion of a limited Phase II Environmental Site Assessment (ESA), completed in conjunction with Geotechnical Exploration conducted at the property. Geotech borings were advanced at the subject property on March 23rd and April 2nd, 2021. Subsequently, the Wisconsin Department of Natural Resources (WDNR) sent a Responsible Party (RP) letter, dated April 23, 2021, which required that a site investigation be conducted for the subject property.

The site investigation consisted of twelve (12) hydraulic push soil borings in addition to the four (4) soil borings conducted as part of the Geotechnical Exploration. Forty (40) unsaturated soil samples and seven (7) groundwater samples were submitted to a state certified laboratory for analysis. Results of the investigation are as follows:

The soils encountered in the soil borings generally consisted of fill materials from ground surface to depths ranging from eight (8) to seventeen (17) feet below land

surface (bls) on the eastern portion of the property and extending up to forty-eight (48) feet bls on the central and western portions of the property. Encountered fill materials generally consisted of a grey fine to medium grained silty sand. However, depending on soil boring location and depth fill materials ranged from reddish brown to brown to tan to light tan to white fine to coarse grained silty sand or sand with varying among of gravel. Glass, brick, and concrete fragments were also encountered in some soil boring locations.

Native unconsolidated materials in the eastern portion of the subject property were encountered at depth ranging from eight (8) to seventeen (17) feet bls and generally consisted of a dark brown to brown to tan fine to coarse grained sand. This material extended to the end of the soil borings, sixteen (16) to twenty (20) feet bls, except in the area of G8, where a tan fine to coarse grained silty sand was encountered from the base of the fill, eleven (11) feet bls to the end of the soil boring sixteen (16) feet bls. In the central of western portions of the subject property, native unconsolidated materials consisted of interbedded dark brown to brown to tan fine to very coarse sand with varying amounts of gravel, fine to coarse grained silty sand, and sandy silt. Native materials were encountered at depths ranging from thirty-eight (38) to forty-eight (48) feet bls and extended to the end of the soil borings, fifty (50) feet bls.

Unsaturated soil contamination, within identified fill materials, exceeding the Wisconsin Administrative Code (WAC) Chapter NR720 Groundwater Pathway Protection RCLs was identified as follows:

- Tetrachloroethene (PCE) in five (5) of the completed soil borings.
- Polycyclic Aromatic Hydrocarbons (PAH) compounds in six (6) of the completed soil borings.
- Lead in six (6) of the completed soil borings.
- Arsenic in all fourteen (14) of the completed soil borings.

Unsaturated soil contamination, within identified fill materials, exceeding the WAC Chapter NR720 Non-Industrial Direct Contact RCLs was identified with the top four (4) feet of the soil column in thirteen (13) of the completed soil borings due to concentrations of Arsenic identified. Arsenic concentrations in eleven (11) of the soil borings also exceeded the WAC Chapter NR720 Industrial Direct Contact RCLs.

However, only one (1) soil boing identified a concentration of Arsenic within the top four (4) feet of the soil column that also exceeded the Wisconsin Background Threshold Value of eight (8) mg/kg.

Unsaturated soil contamination, within underlying native materials, exceeding the WAC Chapter NR720 Groundwater Pathway Protection RCLs was identified as follows:

- PCE in one (1) of the completed soil borings.
- Ethylbenzene, Naphthalene, Trimethylbenzenes, and Xylenes in one (1) of the completed soil borings.
- PAH compounds in three (3) of the completed soil borings.
- Lead in one (1) of the completed soil borings.
- Arsenic in all eleven (11) of the completed soil borings advanced into the underlying native materials. Please note, Arsenic concentrations in zero (0) of the eleven soil borings exceeded the Wisconsin Background Threshold Value.

Dissolved phase groundwater contamination, exceeding the WAC Chapter NR140 Preventive Action Limit (PAL) was identified as follows:

- PCE in six (6) of the collected groundwater samples.
- Benzene in one (1) of the collected groundwater samples.
- Arsenic in one (1) of the collected groundwater samples.
- PAH compounds in three (3) of the collected groundwater samples.

Dissolved phase groundwater contamination, exceeding the WAC Chapter NR140 Enforcement Standard (ES) was not identified during the completion of the site investigation. Free product has not been observed at the site.

Based on the soil and groundwater laboratory analytical results along with site conditions, an evaluation of established WDNR criteria determined vapor intrusion does not appear to be a major concern at this site. PCE impacted soil was identified within one hundred (100) feet of the building's foundation. However, the identified PCE contamination in unsaturated soil appear to be sporadically located and the highest concentration of PCE detected was 0.0903 mg/kg [B-3 (7-9 feet bls)].

Based on these results, REI recommends no additional investigative at this time and the site be reviewed for the possibility of case closure with a cap maintenance plan to manage the identified WAC Chapter NR720 Direct Contact RCL exceedances for Arsenic.

2.0 INTRODUCTION

2.1 Purpose of Report

The purpose of the investigation was to determine the degree and extent of contamination in soil and groundwater. The investigation was prompted after contaminated unsaturated fill materials were discovered during completion of a limited Phase II ESA in April 2021. Subsequently, the WDNR sent a RP letter, dated April 23, 2021, which required that a site investigation be conducted for the subject property.

Williams Addition in the City of Wausau, and part of Government Lot One (1) and part of Government Lot Tow (2), all in Section Thirty-six (36), Township Twenty-nine (29) North, Range Seven (7) East, in the City of Wausau, Marathon County, Wisconsin, together with the Southerly one-half of that part of the vacated alley lying Northerly of and contiguous to said lot in B. Williams Addition.

The site location is depicted in Figure 1. Copies of the current deed and certified survey map are presented in Appendix A.

2.3 Site Background

2.3.1 Current & Historic Land Use

Based on historic Sanborn Fire Insurance Maps and aerial photographs the subject property appears to have been developed prior to 1891. Between 1891 and 1974 the eastern portion of the property along Grand Avenue contained multiple small, conjoined structures which varied in use from private residences, stores, and grocery stores. The structure located in the southeast corner of the property was associated with a larger facility to the south that was used as a brewing company, rubber products manufacturer, and electrical repair. Fill appears to have been placed on the property by 1950. Between 1951 and 1974, aerial photographs show additional fill being placed on the subject property and properties to the north and south. The 1980 aerial photograph appears to depict current site elevations present.

The current site structure was constructed in 1992 and the current property owner purchased the property in 2008. The site structure was utilized as office space.

Sanborn Fire Insurance Maps

1884 – No coverage by Sanborn Fire Insurance Maps

1891 – Approximately western half of the property utilized a lumber yard for Alexander Stewart Lumber Company Southeast yard. Small residence and store located along Grand Avenue on east end of property. Based on the Sanborn Map, an incline is noted on the eastern quarter of the property.

1898 – Western portion of the property noted as lumber yard for Alexander Stewart Lumber Company Southeast. Multiple attached structures including residence, grocery store, and vacant buildings noted adjacent to Grand Avenue. Map indicated an approximately forty (40)

foot decrease in ground surface elevations directly behind the eastern structures.

1904 – No significant changes from 1898. Additional structure associated with Mathie Brewing Company located along Grand Avenue on eastern side of subject property.

1912 – Lumberyard no longer identified on western portion of the property. Adjacent properties to the west appear to have been converted to private residential lots.

1923 – No significant changes to identified bank from 1912. Structure located in southeast corner of the property previously associated with Mathie Brewing Company identified as part of larger Marathon Rubber Products Co.

1950 – Appears some filling occurred on subject property based on mapped bank edge and addition of a free-standing garage behind structures located along Grand Avenue. Structure located in southeast corner of the property previously associated with Marathon Rubber Products Co. identified as electrical repair business.

1954 – No significant changes to subject property from 1950. Based on previous Sanborn maps, areas north of the subject property appear to have fill material placed based construction of building along Grand Avenue in areas of historically steep banks.

1961 – No significant changes to identified bank from 1954. Adjacent property to the north identified as Used Auto Sales.

1963 – No significant changes from 1961.

1967 – No significant changes from 1963.

Aerial Photographs

1938 – Structures present along east side of property adjacent to Grand Avenue. Appears to be a tree covered slop along west side of structures with western portion of the subject property part of a larger lumber yard.

1951 – Low resolution image, unable to identify individual structures or accurately identify change in elevation across subject property.

1962 – Compared to Sanborn Fire Insurance Maps, additional fill material appears present to the west of the site structures.

1964 – Additional filling appears to be occurring on subject property and properties to the north and south.

1974 – Additional filling appears to be occurring on subject property and properties to the north and south. Numerous small piles present on western portion of the property.

1980 – Ground surface elevations appear similar to current elevations. Structure located on adjacent property to the south is present, located on west side of property.

1998 – Current site structure present and ground surface covers appear to match current conditions.

2.3.2 Zoning

Based on the City of Wausau GIS the subject property and the adjacent properties to the north and south are zoned UMU – Urban Mixed Use. The adjacent properties to the west are zoned LI – Light Industrial and the adjacent property across Grand Avenue is zoned I – Institutional. A zoning map from the City of Wausau GIS and select portions of the City of Wausau Title 23: Zoning Ordinance is included in Appendix B.

2.3.3 Previous Releases/Investigations

No other Bureau for Remediation and Redevelopment Tracking System (BRRTS) activities are listed for the subject property and no other releases are known to have occurred on the property.

2.3.4 Current Investigation

American Engineering Testing, Inc. (AET) conducted Geotechnical soil borings on the subject property on March 23rd and April 2nd, 2021. Four (4) soil borings were completed. During the completion of the soil borings, REI personnel collected soil samples from two (2) of the completed soil borings, as part of a limited Phase II Environmental Site Assessment (ESA). Based on findings in the Geotech Report prepared by AET (dated April 7, 2021), fill material was encountered in all four (4) borings advanced at the property ranging from 12 to 48 feet bls. Fill thickness appears to increase across the property from east to west. The source of the fill material is unknown. Laboratory analytical results identified contamination within the unsaturated soils exceeding the WAC Chapter NR720 state soil standards.

The WDNR was notified of the identified contamination on April 6, 2021. On April 26, 2021, the WDNR sent a RP letter identifying the property owners' responsibilities in relation to the identified contamination. An Environmental Repair Program (ERP) site listing was opened for the property on the WDNR's BRRTS database. On May 5, 2021, REI submitted a Site Investigation Workplan on behalf of the responsible party.

2.3.5 Regional Geology & Hydrogeology

The site is located in the northcentral portion of the Central Wisconsin River Basin. Land surface elevation at the site is approximately 1,210 ± 10 feet above MSL according to the U.S.G.S. Wausau East, Wisconsin 7.5-minute quadrangle map. The topography for the region consists of gently rolling till plains slightly modified by stream erosion. The region has many crystalline rock outcroppings that project through the glacial deposits. The nearest surface water is Lake Wausau (WBIC 1437500) located approximately 1,100 feet west of the subject property. Lake Wausau is a drainage lake and impoundment of

the Wisconsin River (WBIC 1179900). Lake Wausau is not listed as an impaired water, but the Wisconsin River is identified as an impaired water due to Mercury and Polychlorinated biphenyls (PCBs).

The geology and water resources of the basin as described by Devaul and Green (1971), indicate that unconsolidated surficial geology generally consists of unpitted outwash consisting of stratified sand and gravel with some clay and silt including alluvium. Major streams generally have branching drainage patterns and there are fewer wetlands or natural lakes compared to outwash deposits to the south and northeast. The bedrock in the area consists of Pre-Cambrian crystalline rock. The depth to bedrock is anticipated to be present at approximately 80 feet bls, based on local Well Construction Reports.

Soil permeabilities for the unpitted outwash material are 2.5 to 5 inches per hour. The average annual precipitation in the area is about 30.9 inches per year. The typical evapotranspiration rate is about 19.7 inches per year. This leaves about 11.2 inches per year for surface runoff and groundwater recharge. Surface water inflow into the basin averages 7.1 inches per year and outflow averages 18 inches per year (Devaul and Green, 1971). Since approximately 1992, the majority of the property has been covered by the site structure and surrounding asphalt and concrete surface covers except for the western most portion of the property which consists of a steep slope with decreasing elevation toward the west which is covered with vegetation. The current site structure, asphalt, and concrete surface covers effectively reduces the site-specific groundwater recharge rate to 2.5 inches per year, or 25 percent of the NR720.09(3) default rate of 10.0 inches per year.

3.0 METHODOLOGIES

Sampling methods and procedures are included in this report as Appendix C. Site photographs are presented in Appendix D. Soil boring logs are provided in Appendix E. Borehole abandonment forms (WDNR Form 3300-005) are provided in Appendix F. The current layout of the property, sample locations are shown on Figures 2.

3.1 Soil

Investigation of the extent of soil contamination was conducted via a truck mounted hydraulic push drill rig. The majority of these borings were advanced around the perimeter of on-site structure and near the property boundaries. The borings were placed to determine the lateral and vertical extents of fill and contamination in the subsurface. The soil borings were advanced to depths ranging from sixteen (16) to fifty (50) feet bls. Soil samples were screened using a Photoionization Ionization Detector (PID) with a 10.6 eV lamp. Methods and procedures for soil sampling are summarized in Appendix C.

A total of four (4) soil samples were collected as part of the limited Phase II ESA and thirty-six (36) soil samples were collected from the completed soil borings. Soil samples collected during the limited Phase II ESA were submitted to a State of Wisconsin Certified Laboratory for analysis of Resource Conservation and Recovery Act (RCRA) Metals and VOCs. Soil samples collected during the site investigation were submitted to a State of Wisconsin Certified Laboratory for analysis of Arsenic, Lead, PAH compounds and VOCs. The soil analytical results are summarized on Tables 1a-c. The complete laboratory soil analytical reports are presented in Appendix G.

3.2 Groundwater

Groundwater samples were collected from the open boreholes of soil borings G1 through G7. Seven (7) groundwater samples were collected from completed soil borings. The samples were placed in laboratory provided containers and submitted to a State Certified Laboratory for analysis of Dissolved Arsenic, Dissolved Lead, PAH compounds and VOCs. Methods and procedures for groundwater sampling are included in Appendix B. Analytical results for the collected groundwater samples are summarized on Tables 2a-b. The complete laboratory groundwater analytical reports are presented in Appendix G. Additional information regarding site specific groundwater characteristics is presented in later sections of this report.

3.3 Investigative Wastes

No investigative waste was generated as part of this site investigation.

3.4 Borehole Abandonment

After completion soil borings conducted as part of the site investigation were property abandoned and impenetrable ground surface covers repaired. Soil boring abandonment forms (WDNR Form 3300-005) are provided in Appendix F.

4.0 SUMMARY OF SITE INVESTIGATION

The following is a summary of events that have taken place at the site as part of the site investigation:

April 6, 2021	REI submitted a Notification for Hazardous Substance Discharge (Form 4400-225) on behalf of the responsible party after unsaturated soil contamination was identified on the subject property.
April 26, 2021	WDNR sent out a RP letter to the property owner.
May 5, 2021	REI submitted Site Investigation Work Plan to the WDNR.
May 10-11, 2021	REI personnel on site to oversee the completion of soil borings G1 through G12.

5.0 RESULTS OF INVESTIGATION

5.1 Site Geology

The soils encountered in the soil borings generally consisted of fill materials from ground surface to depths ranging from eight (8) to seventeen (17) feet bls on the eastern portion of the property and extending up to forty-eight (48) feet bls on the central and western portions of the property. Encountered fill materials generally consisted of a grey fine to medium grained silty sand. However, depending on soil boring location and depth fill materials ranged from reddish brown to brown to tan to light tan to white fine to coarse grained silty sand or sand with varying among of gravel. Glass, brick, and concrete fragments were also encountered in some soil boring locations.

Native unconsolidated materials in the eastern portion of the subject property were encountered at depth ranging from eight (8) to seventeen (17) feet bls and generally consisted of a dark brown to brown to tan fine to coarse grained sand. This material extended to the end of the soil borings, sixteen (16) to twenty (20) feet bls, except in the area of G8, where a tan fine to coarse grained silty sand was encountered from the base of the fill, eleven (11) feet bls to the end of the soil boring sixteen (16) feet bls. In the central of western portions of the subject property, native unconsolidated materials consisted of interbedded dark brown to brown to tan fine to very coarse sand with varying amounts of gravel, fine to coarse grained silty sand, and sandy silt. Native materials were encountered at depths ranging from thirty-eight (38) to forty-eight (48) feet bls and extended to the end of the soil borings, fifty (50) feet bls.

Figure 3 depicts a cross section of the site based on observations from soil borings. Soil boring logs are included in Appendix E. Borehole abandonment forms (WDNR Form 3300-005) are included in Appendix F.

5.2 Site Hydrogeology

The subsurface investigation was conducted via a truck mounted hydraulic push drill rig. Based on the observations made from the soil sampling lines, depth to groundwater appears to exist at depths ranging from forty-four (44) to forty-eight (48) feet bls. Based on the historic ground surface slope and location of nearby waterbodies, Lake Wausau and Wisconsin River, the local groundwater flow direction is assumed to toward the west.

5.3 Soil & Vadose Zone Quality

Surface conditions observed at the boring locations included mostly asphalt surface covers except in the area of soil boring G1 where surface covers consisted of manicured grass. Samples collected and submitted for laboratory analysis during boring installation were collected from above the water table, as observed in the sampler liner. Text within the site investigation report only identifies exceedances of the WAC Chapter NR720 Non-Industrial and Industrial Direct Contact RCLs for soil samples collected within the top four (4) feet of the soil column. Soil analytical results are summarized on Tables 1a-c and identify exceedances of the WAC Chapter NR720 Non-Industrial and Industrial Direct Contact RCLs for soil samples collected at depths

greater than four (4) feet bls. The estimated extent of unsaturated soil contamination is presented on Figures 4-6. The complete laboratory reports are included in Appendix G.

5.3.1 Fill Material

Unsaturated soil contamination identified, within fill materials present at the site, during the limited Phase II ESA and site investigation soil borings included concentrations exceeding the WAC Chapter NR720 state soil standards for the following:

Concentrations of Tetrachloroethene (PCE) exceeding the WAC Chapter NR720 Groundwater Pathway Protections RCL were identified in soil samples B-3 (7-9 feet bls), G6-5 (18-20 feet bls), G8-1 (2-4 feet bls), G8-3 (9-11 feet bls), G10-1 (2-4 feet bls), and G12-4 (14-16 feet bls).

Concentrations of Arsenic exceeding the WAC Chapter NR720 Groundwater Pathway Protection RCL were identified in soil samples B-3 (2.5-4 feet bls), B-3 (7-9 feet bls), B-4 (5-6.5 feet bls), G1-1 (2-4 feet bls), G1-9 (32-36 feet bls), G2-1 (2-4 feet bls), G2-8 (30-32 feet bls), G3-1 (2-4 feet bls), G3-9 (32-36 feet bls), G4-1 (2-4 feet bls), G4-9 (32-36 feet bls), G5-1 (2.5-4 feet bls), G5-9 (32-36 feet bls), G6-1 (2.5-4 feet bls), G6-5 (18-20 feet bls), G7-1 (2-4 feet bls), G7-6 (22-24 feet bls), G8-1 (2-4 feet bls), G8-3 (9-11 feet bls), G9-1 (2-4 feet bls), G9-2 (6-8 feet bls), G10-1 (2-4 feet bls), G10-4 (14-16 feet bls), G11-1 (2-4 feet bls), G11-2 (6-8 feet bls), G12-1 (2-4 feet), G12-3 (8-10 feet bls), and G12-4 (14-16 feet bls). The concentrations identified in soil samples B-3 (2.5-4 feet bls) and G5-1 (2.5-4 feet bls) also exceeded the WAC Chapter NR720 Non-Industrial Direct Contact RCL. The concentrations identified in soil samples G1-1 (2-4 feet bls), G1-9 (32-36 feet bls), G2-1 (2-4 feet bls), G3-1 (2-4 feet bls), G4-1 (2-4 feet bls), G6-1 (2.5-4 feet bls), G7-1 (2-4 feet bls), G8-1 (2-4 feet bls), G9-1 (2-4 feet bls), G10-1 (2-4 feet bls), G11-1 (2-4 feet bls), and G12-1 (2-4 feet) also exceeded the WAC Chapter NR720 Industrial Direct Contact RCL. Please note, all the identified concentrations, except soil samples G2-1 (2-4 feet bls), G8-3 (9-11 feet bls), G12-3 (8-10 feet bls), and G12-4 (14-16 feet bls), were below the Wisconsin BTV of eight (8) mg/kg for Arsenic.

Concentrations of Lead exceeding the WAC Chapter NR720 Groundwater Pathway Protection RCL were identified in soil samples B-3 (2.5-4 feet bls), B-3 (7-9 feet bls), B-4 (5-6.5 feet bls), G5-1 (2.5-4 feet bls), G6-5 (18-20 feet bls), G8-3 (9-11 feet bls), G12-3 (8-10 feet bls) and G12-4 (14-16 feet bls). Please note, the identified concentrations in soil samples G5-1 (5-6.5 feet bls) and G6-5 (18-20 feet bls) were below the Wisconsin BTV of fifty-two (52) mg/kg for Lead. The concentrations identified in soil samples G12-3 (8-10 feet bls) and G12-4 (14-16 feet bls) also exceeded the WAC Chapter NR720 Non-Industrial Direct Contact RCL.

A concentration of Benzo(a)Anthracene exceeding the WAC Chapter NR720 Industrial Direct Contact RCL was identified in soil sample G10-1 (2-4 feet bls).

Concentrations of Benzo(a)Pyrene exceeding the WAC Chapter NR720 Groundwater Pathway Protection RCL were identified in soil samples G8-3 (9-11 feet bls), G9-2 (6-8 feet bls), G10-1 (2-4 feet bls), G11-1 (2-4 feet bls), and G11-2 (6-8 feet bls). The concentration identified in soil sample G10-1 (2-4 feet bls) also exceeded the WAC Chapter NR720 Industrial Direct Contact RCL and the concentration identified in soil sample G11-1 (2-4 feet bls) also exceeded the WAC Chapter NR720 Non-Industrial Direct Contact RCL.

Concentrations of Benzo(b)Fluoranthene exceeding the WAC Chapter NR720 Groundwater Pathway Protection RCL were identified in soil samples G6-5 (18-20 feet bls), G8-3 (9-11 feet bls), G10-1 (2-4 feet bls), G11-1 (2-4 feet bls), and G11-2 (6-8 feet bls). The concentration identified in soil sample G10-1 (2-4 feet bls) also exceeded the WAC Chapter NR720 Industrial Direct Contact RCL.

Concentrations of Benzo(k)Fluoranthene exceeding the WAC Chapter NR720 Non-Industrial Direct Contact RCL was identified in soil samples G6-5 (18-20 feet bls) and G10-1 (2-4 feet bls).

Concentrations of Chrysene exceeding the WAC Chapter NR720 Groundwater Pathway Protection RCL were identified in soil samples G6-5 (18-20 feet bls), G8-3 (9-11 feet bls), G9-2 (6-8 feet bls), G10-1 (2-4 feet bls), G11-1 (2-4 feet bls), G11-2 (6-8 feet bls), and G12-3 (8-10 feet bls).

A concentration of Dibenzo(a,h)Anthracene exceeding the WAC Chapter NR720 Industrial Direct Contact RCL was identified in soil sample G10-1 (2-4 feet bls).

A concentration of Fluoranthene exceeding the WAC Chapter NR720 Groundwater Pathway Protection RCL was identified in soil sample G6-5 (18-20 feet bls).

A concentration of Fluorene exceeding the WAC Chapter NR720 Groundwater Pathway Protection RCL was identified in soil sample G6-5 (18-20 feet bls).

A concentration of Indeno(1,2,3-cd)Pyrene exceeding the WAC Chapter NR720 Non-Industrial Direct Contact RCL was identified in soil sample G10-1 (2-4 feet bls).

Concentrations of Methylene Chloride exceeding the WAC Chapter NR720 Groundwater Pathway Protections RCLs were identified in soil samples G4-1 (2-4 feet bls), G4-9 (32-36 feet bls), G5-1 (2-4 feet bls), and G9-1 (2-4 feet bls). Please note all the above analytical results included a lab qualifier indicating that the provide results was between the Limit of Detection and Limit of Quantification. Additionally, low level concentrations of Methylene Chloride are a common laboratory contaminant associated with analysis of volatile compounds. Due to the low concentrations identified in the four (4) above soil samples it appears likely that the concentrations are not representative of contamination within the subsurface, but rather a contaminant associated with the laboratory analysis.

5.3.2 Native Unconsolidated Materials

A concentration of Ethylbenzene exceeding the WAC Chapter NR720 Groundwater Pathway Protection RCL was identified in soil sample G2-12 (45.5-48 feet bls).

A concentration of Naphthalene exceeding the WAC Chapter NR720 Groundwater Pathway Protection RCL was identified in soil sample G2-12 (45.5-48 feet bls).

A concentration of Trimethylbenzenes exceeding the WAC Chapter NR720 Groundwater Pathway Protection RCL was identified in soil sample G2-12 (45.5-48 feet bls).

A concentration of Xylenes exceeding the WAC Chapter NR720 Groundwater Pathway Protection RCL was identified in soil sample G2-12 (45.5-48 feet bls).

Concentrations of Arsenic exceeding the WAC Chapter NR720 Groundwater Pathway Protection RCL were identified in soil samples G1-11 (42-44 feet bls), G2-12 (45.5-48 feet bls), G3-11 (43-44 feet bls), G4-12 (45-48 feet bls), G5-11 (42-44 feet bls), G6-12 (45-47 feet bls), G7-10 (28-40 feet bls), G8-4 (12-14 feet bls), G9-3 (8-10 feet bls), G10-5 (17-19 feet bls), and G11-3 (10-12 feet bls). Please note, all the identified concentrations were below the Wisconsin BTV of eight (8) mg/kg for Arsenic.

A concentration of Lead exceeding the WAC Chapter NR720 Groundwater Pathway Protection RCL was identified in soil samples G1-11 (42-44 feet bls). Please note, the identified concentration was below the Wisconsin BTV of fifty-two (52) mg/kg for Lead.

Concentrations of Benzo(a)Pyrene exceeding the WAC Chapter NR720 Groundwater Pathway Protection RCL were identified in soil samples G1-11 (42-44 feet bls), G2-12 (45.5-48 feet bls), and G5-11 (42-44 feet bls).

Concentrations of Benzo(b)Fluoranthene exceeding the WAC Chapter NR720 Groundwater Pathway Protection RCL were identified in soil samples G1-11 (42-44 feet bls) and G5-11 (42-44 feet bls).

Concentrations of Chrysene exceeding the WAC Chapter NR720 Groundwater Pathway Protection RCL were identified in soil samples G1-11 (42-44 feet bls), G2-12 (45.5-48 feet bls), and G5-11 (42-44 feet bls).

Due to limited native soil materials located above the observed water table, soils samples of native materials from soil borings G1, G2, G3, G4, G5, and G6 were collected in close proximity to the interface of fill and native materials.

5.4 Groundwater Quality

Groundwater samples were collected from open boreholes of soil borings G1 through G7.

Concentrations of Tetrachloroethene (PCE) exceeding the WAC Chapter NR140 Preventive Action Limit (PAL) were identified in groundwater samples G1-W, G2-W, G3-W, G4-W, G6-W, and G7-W.

A concentration of Benzene exceeding the WAC Chapter NR140 PAL was identified in groundwater sample G2-W.

A concentration of Arsenic exceeding the WAC Chapter NR140 PAL was identified in groundwater sample G2-W.

A concentration of Benzo(b)Fluoranthene exceeding the WAC Chapter NR140 PAL was identified in groundwater sample G2-W.

Concentrations of Chrysene exceeding the WAC Chapter NR140 Preventive Action Limit (PAL) were identified in groundwater samples G2-W, G3-W, and G7-W.

The laboratory analytical results identified no exceedances of the WAC Chapter NR140 Enforcement Standards for any of the analyzed compounds.

The results of groundwater sampling are summarized on Table 2a-c. The approximate extent of dissolved phase groundwater contamination is depicted in Figure 7. The complete laboratory analytical reports are included in Appendix G.

5.5 Potential/Known Receptors

Based on the laboratory analytical results for soil boring G10, unsaturated soil contamination consisting of Tetrachloroethene exceeding the WAC Chapter NR720 Groundwater Pathway Protection RCLs exists in the area of the potable water and sanitary sewer laterals servicing the site structure. However, contamination was encountered at a depth of two (2) to four (4) feet bls and seventeen (17) to nineteen (19) feet bls, but the concentration of Tetrachloroethene was below the laboratory method limit of detection at a depth of fourteen (14) to sixteen (16) feet bls. The depth and backfill material of the private laterals is not known, but both lines are assumed to

exist at depths greater than four (4) feet bls. Dissolved phase groundwater contamination exceeding the WAC Chapter NR140 ES does not appear to be an issue based on the groundwater analytical results. Free product was not encountered during the completion of the site investigation.

5.5.1 Vapor Intrusion Potential

Based on WDNR Publication RR-800 *Addressing Vapor Intrusion at Remediation and Redevelopment Sites in Wisconsin*, the vapor intrusion pathway can be ruled out if the following criteria do not apply to the site:

Chlorinated Volatile Organic Compounds (CVOC)

- *CVOC contaminated soil are within one hundred (100) feet of the building foundation horizontally or vertically.*
    - This situation does apply. Based on the current analytical results, CVOC contaminated soils appear to exist within one hundred (100) feet of the buildings foundation horizontally and vertically. However, the identified PCE contamination in unsaturated soil appear to be sporadically located and the highest concentration of PCE detected was 0.0903 mg/kg [B-3 (7-9 feet bls)].

- *CVOC concentration in groundwater underlying a building is greater than the WAC Chapter NR140 ES.*
    - This situation does not apply. Based on groundwater samples collected from the open boreholes of soil boring G1 through G7, dissolved phase PCE concentrations do not appear to exceed the WAC Chapter NR140 ES.

- *Groundwater contaminated with CVOC above the NR140 PAL is entering a building or in contact with the building's foundation.*
    - This situation does not apply. The current on-site structure is a slab on-grade building and based on the hydraulic push soil boring advanced to the water table groundwater exists at depths of approximately forty-four (44) to forty-eight (48) feet bls. Dissolved phase CVOC contamination exceeding the WAC

Chapter NR140 PAL is not expected to be in contact with the building's foundation.

- *CVOC vapors are present that may migrate from the source areas and move through preferential pathways into a building.*
    - This situation <u>may</u> apply. Based on the laboratory analytical results for soil boring G10, unsaturated soil contamination consisting of Tetrachloroethene exceeding the WAC Chapter NR720 Groundwater Pathway Protection RCLs exists in the area of the potable water and sanitary sewer laterals servicing the site structure. However, contamination was encountered at a depth of two (2) to four (4) feet bls and seventeen (17) to nineteen (19) feet bls, but the concentration of Tetrachloroethene was below the laboratory method limit of detection at a depth of fourteen (14) to sixteen (16) feet bls. The depth and backfill material of the private laterals is not known, but both lines are assumed to exist at depths greater than four (4) feet bls.

<u>Petroleum Volatile Organic Compounds (PVOC)</u>

- *When petroleum odors are detected in the building*.
    - This situation <u>does not</u> apply. Per the current property owner, petroleum odors have never been reported within the current site structure.

- *Free-phase product that has the potential for off-gassing vapor underlies a building within fifteen (15) feet vertically or is within thirty (30) feet of the building foundation horizontally.*
    - This situation <u>does not</u> apply, free product has not been observed during this investigation.

- *Petroleum contaminated soils with the potential for off-gassing vapors are within five (5) feet or less of a building foundation.*
    - This situation <u>does not</u> apply. Based on the analytical results of soil borings, there appears to be greater than five (5) feet vertically from

the off-site building to unsaturated soil with petroleum contamination.

- *Less than five (5) feet in the horizontal and vertical direction of clean, unsaturated soil with an oxygen content of greater than or equal to 5%.*
    - This situation <u>does not</u> apply. Based on the analytical results of soil borings, there appears to be greater than five (5) feet vertically from the off-site building to unsaturated soil with petroleum contamination.

- *Benzene concentration in groundwater underlying a building is >1,000 ppb and there is less than five (5) feet of unsaturated soil between the groundwater and the building foundation.*
    - This situation <u>does not</u> apply. Based on groundwater analytical results, dissolved phase Benzene concentrations does not appear to exceed the WAC Chapter NR140 ES (5 µg/L).

- *Groundwater contaminated with petroleum product above the NR140 PAL is entering a building or in contact with the building's foundation.*
    - This situation <u>does not</u> apply. The current on-site structure is a slab on-grade building and based on the hydraulic push soil boring advanced to the water table groundwater exists at depths of approximately forty-four (44) to forty-eight (48) feet bls. Dissolved phase petroleum contamination exceeding the WAC Chapter NR140 PAL is not expected to be in contact with the building's foundation.

- *Petroleum vapors are present that may migrate from the petroleum source and move through preferential pathways into a building.*
    - This situation <u>does not</u> apply. Based on the laboratory analytical results, buried utility corridors do not appear to exist with in the estimated extent of petroleum contamination at this site.

Based on the above criteria, the vapor intrusion pathway cannot be ruled out due to the presence of PCE impacted soil within one hundred (100) feet of the building's foundation. However, the identified PCE contamination in

unsaturated soil appear to be sporadically located and the highest concentration of PCE detected was 0.0903 mg/kg [B-3 (7-9 feet bls)].

5.5.2 Private or Municipal Potable Wells

The subject property is served by the City of Wausau municipal water system. The surrounding properties are all served by the City of Wausau municipal water system. According to the City of Wausau Water Works department, no municipal wells exist within 1,200 feet of the subject property. No private potable wells are known to exist within 1,200 feet of the subject property.

5.5.3 Surface Water & Sediments

The nearest surface water is Lake Wausau (WBIC 1437500) located approximately 1,100 feet west of the subject property. Lake Wausau is a drainage lake and impoundment of the Wisconsin River (WBIC 1179900). Lake Wausau is not listed as an impaired water, but the Wisconsin River is identified as an impaired water due to Mercury and PCBs. Based on the laboratory, the extent of residual contamination from this site does not appear to be impacting any surface waters or sediments.

6.0 SITE CHARACTERIZATION

The subject property is currently developed with one (1) single store slab on-grade commercial structure, constructed in 1992, utilized for office space. Ground surface covers on the property generally consist of asphalt and concrete with limited areas of landscaping. A steep downward slope exists on the western portion of the property and is covered with vegetation including trees and brush.

Unsaturated soil contamination exceeding the WAC Chapter NR720 state soil standards and dissolved phase groundwater contamination exceeding the WAC Chapter NR140 PAL at this property appear to be associated with historic fill placed on the property between approximately 1950 and 1980. Fill materials appear to have been placed along the Grave Avenue corridor to the north of south of this property around the same period and were likely from the same source.

As the source of the fill materials historically placed on the subject property and properties to the north and south is not known the potential presence of Perfluoroalky and Polyfluoroalky Substances (PFAS) can not be ruled out. However, the historic and current land use of the subject property did not identify any land uses generally associated with PFAS.

7.0 CONCLUSION & RECOMMENDATIONS

Based on the data collected, soil contamination, exceeding the WAC Chapter NR720 Groundwater Pathway Protection and Direct Contact RCLs exists on the subject property. Please note, the majority of the subject property is currently covered with the site structure or impenetrable ground surface covers. Unsaturated soil contamination, including Perchloroethylene, Arsenic, Lead, PAH compounds, and Petroleum Volatile Organic Compounds appear to be associated with historic fill material placed on the subject property. Fill materials appear to have been placed along the Grave Avenue corridor to the north of south of this property around the same period and were likely from the same source. The extent of unsaturated soil contamination appears to have been adequately defined.

Dissolved phase groundwater contamination, exceeding the WAC Chapter NR140 PAL for Perchloroethylene was identified in six (6) of the seven (7) groundwater samples collected from open soil borings. Three (3) of the collected groundwater samples also identified WAC Chapter NR140 PAL exceedances for Chrysene. The dissolved phase concentration of Benzene, Arsenic, and Benzo(b)Fluoranthene exceeded the WAC Chapter NR140 PAL in groundwater sample G2-W. Free product has not been observed at the site.

Based on these results, REI recommends no additional investigative at this time and the site be reviewed for the possibility of case closure with a cap maintenance plan to manage the identified WAC Chapter NR720 Direct Contact RCL exceedances for Arsenic.

Notes:
NR 720 Standards Obtained From WDNR RR Program's Soil RCL Spreadsheet
This site is assessed as Non-Industrial
RCL = Residual Contaminant Level
DC = Direct Contact
mg/kg = Parts Per Million (ppm)
< = Concentration Below Laboratory Detection Limit
- = Not Sampled/Collected
- - = No Standard/Not Applicable
[J] = Estimated concentration at or above the Limit of Detection (LOD) and below the Limit of Quantitation (LOQ)

Italic	= Exceeds NR720 Groundwater Pathway Protection
Bold	= Exceeds NR720 Non-Industrial Not-To-Exceed DC RCL
Underlined	= Exceeds NR720 Industrial Not-To-Exceed DC RCL

NR 720 Standards Obtained From WDNR RR Program's Soil RCL Spreadsheet
This site is assessed as Non-Industrial
RCL = Residual Contaminant Level
DC = Direct Contact
mg/kg = Parts Per Million (ppm)
< = Concentration Below Laboratory Detection Limit
- = Not Sampled/Collected
- - = No Standard/Not Applicable
[J] = Estimated concentration at or above the Limit of Detection (LOD) and below the Limit of Quantitation (LOQ)
Please note: Exceedances for compounds with background threshold values are only identified as exceeding a RCL after exceeding the background threshold values.

Section 23.02.54: (UMU) Urban Mixed-Use Zoning District

(1) Intent. This district is intended to permit areas, generally on established commercial corridors, that are or are planning to become mixed use in character and establish standards that are compatible with the existing mix of land uses and redevelopment objectives. This district is intended to provide for a variety of employment, retail, and community service opportunities, while allowing some residential uses at an approximate density of up to 36 dwelling units per acre. Residential uses should not become the majority ground floor land use in this district. As of the adoption of this code, any existing single-family or two-family use on a parcel zoned Urban Mixed-Use is a legal conforming land use. Uses shall be compatible not only with other uses within the district, but land uses in adjoining zoning districts as well.

(2) Principal Uses Permitted by Right. Refer to Article III for detailed definitions and requirements for each of the following land uses.

(a) Existing Single-Family or Two-Family Land Use (as of the adoption of this code)
(b) Townhouse 2-4 units
(c) Townhouse 5-8 units

Section 23.02.60: (LI) Light Industrial Zoning District

(1) Intent. This district is intended to permit both small- and mid-scale industrial and office development at an intensity which is consistent with economic development objectives and compatible with adjacent residential and commercial development. The primary distinguishing feature of this district is that it is geared toward indoor industrial activities with some loading and unloading exposed which are not typically associated with high levels of noise, soot, odors and other potential nuisances for adjoining properties.

(2) Principal Uses Permitted by Right. Refer to Article III for detailed definitions and requirements for each of the following land uses.

(a) Office
(b) Personal or Professional Service
(c) Outdoor Display
(d) Artisan Production Shop
(e) Commercial Kitchen
(f) Indoor Maintenance Service
(g) Outdoor Open Space Institutional
(h) Passive Outdoor Recreation
(i) Active Outdoor Recreation
(j) Essential Services
(k) Light Industrial
(l) Indoor Storage and Wholesaling

(3) Principal Uses Permitted as Conditional Use. Refer to Article III for detailed definitions and requirements for each of the following land uses.

(a) Vehicle Service and Repair
(b) Large Scale Public Services and Utilities
(c) Production Greenhouse
(d) Indoor Food Production and Processing
(e) Personal Storage Facility
(f) Transit Center
(g) Distribution Center
(h) Off-Site Parking Lot
(i) Off-Site Structured Parking
(j) Communication Tower
(k) Cultivation
(l) Community Garden

(4) Accessory Uses Permitted by Right. Refer to Article III for detailed definitions and requirements for each of the following land uses.

(a) Flag Pole
(b) Shed/Storage Building
(c) Walkways/Steps
(d) Detached Accessory Buildings
(e) Home Occupations
(f) Tourist Rooming Housing (In Single-Family Home)

Section 23.02.50: (I) Institutional Zoning District

(1) Intent. This district is intended to permit both large- and small-scale institutional development including those on single sites within larger areas of both residential and nonresidential zoning districts. Residential uses are intended to occur at an approximate density of 1 dwelling unit per acre or a density similar to the adjacent zoning districts, whichever is less restrictive. This district avoids the creation of commercial spot zone intrusions in primarily residential or industrial areas where spots of commercial zoning may be incompatible.

(2) Principal Uses Permitted by Right. Refer to Article III for detailed definitions and requirements for each of the following land uses.

(a) Office
(b) Personal or Professional Service
(c) Artisan Production Shop
(d) Group Daycare Center
(e) Water-Related Recreation
(f) Indoor Institutional
(g) Outdoor Open Space Institutional
(h) Passive Outdoor Recreation

METHODS AND PROCEDURES

METHODS AND PROCEDURES

FOR

GEOPROBE SOIL SAMPLING

The Geoprobe unit hydraulically advances threaded, two-inch diameter, four-foot long, steel rod sections into the subsurface. A four-foot sampler, consisting of a drive shoe, a steel tube with a clean acetate liner, and a drive-head retractable piston, is attached to the leading Geoprobe rod. The sampler is driven down to the top of the interval to be sampled. The stop-pin is removed to release the drive head piston, which retracts as the sampler is advanced. When the sampler has been advanced four feet, the rods are retracted from the hole and the soil in the acetate liner is recovered. The acetate liner is split open and the soil is visually and manually classified by the field geologist/technician in accordance with **ASTM:D2488-84**. Logs of the borings are filled out indicating the depth and identification of the various strata, water level information, and pertinent information regarding the method of maintaining and advancing the borings.

Immediately after identification, the soil is quickly divided into two portions. One portion is prepared for potential laboratory analysis. The other portion is placed into a clean one-quart Ziploc bag for field screening. See the section "Soil Headspace Analysis" for field screening procedures.

HEADSPACE ANALYSIS

The soils were screened with a Mini-RAE photoionization detector (PID) equipped with an 10.6 eV lamp. The detector was calibrated in instrument units for Total Organic Vapors using an isobutylene standard. The soil sample, sealed in a Ziploc bag, was shaken vigorously to promote volatilization of the contaminant into the headspace of the bag. The sample was allowed to rest for at least ten minutes and then shaken again before screening. When ambient temperatures were below 60 degrees F, soil samples were allowed to warm for a minimum of 10 minutes in a heated environment prior to headspace development. The Ziploc bag was punctured with the PID probe and the resulting meter reading was recorded.

SAMPLING AND CHAIN OF CUSTODY

Soil samples for laboratory analysis were collected into laboratory prepared vials. Each vial was labeled and placed directly into a cooler pending delivery to the laboratory. Latex gloves were worn during all sample collection procedures.

An entry on a Chain of Custody log was completed as each sample was collected. The Chain of Custody included the following information: project name, work order number, shipped by, shipped to, sampling point, location, field ID number, date and time taken, sample type, number of containers, analysis required, sampler (s) signature (s), etc. As few people as possible handled the samples. The Chain of Custody log was sent to the laboratory with each cooler of samples.

DECONTAMINATION

Sampling equipment was decontaminated prior to sampling. Steel rod sections were washed after every sample collected.

METHODS AND PROCEDURES

FOR

GEOPROBE WATER SAMPLING

GROUNDWATER PROFILER (IF SOIL SAMPLES ARE NOT COLLECTED)

The Geoprobe rods are connected to a covered stainless steel, 2-foot screen and driven to the appropriate depth. Internal rods are inserted in the hollow rods, and the cover is unscrewed and released, exposing the screen. Following sample collection, the rods are withdrawn, and the borehole is properly abandoned.

TEMPORARY CASING AND SCREEN INSTALLATION (FOLLOWING SOIL SAMPLING)

One (1) inch PVC casing and screen is placed in the open geoprobe borehole to the appropriate depth. The annular space seal between the screen and the borehole is filled with #30 Red Flint filter pack sand. Following sample collection, the casing and screen is withdrawn, and the borehole is properly abandoned.

PURGING, SAMPLING AND CHAIN OF CUSTODY

Disposable ¼" polyethylene tubing is inserted to the screen and connected to a peristaltic pump. The water is pumped slowly until sediment free. Purge water is containerized for proper disposal. Water samples are collected directly from the tubing. If the well is purged dry, it is allowed to recharge and then sampled. Samples are labeled and placed in a cooler to be preserved at approximately 4 degrees C. Samples are accompanied by Chain of Custody records.

Upon completion of a sample, a chain of custody log is initiated. The chain of custody record includes the following information: project name, work order number, shipped by, shipped to, sampling point, location, field ID number, date and time taken, sample type, number of containers, analysis required, sampler (s) signature (s), etc. As few people as possible handle the samples.

DECONTAMINATION

Sampling equipment is decontaminated prior to sampling. The Geoprobe rods and screen are washed between holes using distilled water and Alconox cleaning detergent. New, disposable

tubing is used at each sample location. Latex gloves are worn during all sample collection procedures and are changed between the collection of each of the water samples from each monitoring well.

RE: Project: 9640A FONG FAMILY, LLC
Pace Project No.: 40226787

Dear Brian Bailey:

Enclosed are the analytical results for sample(s) received by the laboratory on May 12, 2021. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Green Bay

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Brian Basten

QUALIFIERS

Project: 9640A FONG FAMILY, LLC
Pace Project No.: 40226787

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor, percent moisture, initial weight and final volume.

LOQ - Limit of Quantitation adjusted for dilution factor, percent moisture, initial weight and final volume.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

D3	Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.
HS	Results are from sample aliquot taken from VOA vial with headspace (air bubble greater than 6 mm diameter).
L1	Analyte recovery in the laboratory control sample (LCS) was above QC limits. Results may be biased high.
L2	Analyte recovery in the laboratory control sample (LCS) was below QC limits. Results may be biased low.
M0	Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.
M1	Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
R1	RPD value was outside control limits.
S4	Surrogate recovery not evaluated against control limits due to sample dilution.
pH	Post-analysis pH measurement indicates insufficient VOA sample preservation.

Technical Assistance, Environmental Liability Clarification or Post-Closure Modification Request

Notice: Use this form to request **a written response (on agency letterhead)** from the Department of Natural Resources (DNR) regarding technical assistance, a post-closure change to a site, a specialized agreement or liability clarification for Property with known or suspected environmental contamination. A fee will be required as is authorized by s. 292.55, Wis. Stats., and NR 749, Wis. Adm. Code., unless noted in the instructions below. Personal information collected will be used for administrative purposes and may be provided to requesters to the extent required by Wisconsin's Open Records law [ss. 19.31 - 19.39, Wis. Stats.].

Definitions

"Property" refers to the subject Property that is perceived to have been or has been impacted by the discharge of hazardous substances.

"Liability Clarification" refers to a written determination by the Department provided in response to a request made on this form. The response clarifies whether a person is or may become liable for the environmental contamination of a Property, as provided in s. 292.55, Wis. Stats.

"Technical Assistance" refers to the Department's assistance or comments on the planning and implementation of an environmental investigation or environmental cleanup on a Property in response to a request made on this form as provided in s. 292.55, Wis. Stats.

"Post-closure modification" refers to changes to Property boundaries and/or continuing obligations for Properties or sites that received closure letters for which continuing obligations have been applied or where contamination remains. Many, but not all, of these sites are included on the GIS Registry layer of RR Sites Map to provide public notice of residual contamination and continuing obligations.

Select the Correct Form

This from should be used to request the following from the DNR:

- Technical Assistance
- Liability Clarification
- Post-Closure Modifications
- Specialized Agreements (tax cancellation, negotiated agreements, etc.)

Do <u>not</u> use this form if one of the following applies:

- Request for an **off-site liability exemption or clarification** for Property that has been or is perceived to be contaminated by one or more hazardous substances that originated on another Property containing the source of the contamination. Use DNR's Off-Site Liability Exemption and Liability Clarification Application Form 4400-201.
- Submittal of an Environmental Assessment for the **Lender Liability Exemption**, s 292.21, Wis. Stats., **if no response or review by DNR is requested**. Use the Lender Liability Exemption Environmental Assessment Tracking Form 4400-196.
- Request for an **exemption to develop on a historic fill site** or licensed landfill. Use DNR's Form 4400-226 or 4400-226A.
- **Request for closure** for Property where the investigation and cleanup actions are completed. Use DNR's Case Closure - GIS Registry Form 4400-202.

All forms, publications and additional information are available on the internet at: dnr.wi.gov/topic/Brownfields/Pubs.html.

Instructions

1. Complete sections 1, 2, 6 and 7 for all requests. Be sure to provide adequate and complete information.
2. Select the type of assistance requested: Section 3 for technical assistance or post-closure modifications, Section 4 for a written determination or clarification of environmental liabilities; or Section 5 for a specialized agreement.
3. Include the fee payment that is listed in Section 3, 4, or 5, unless you are a "Voluntary Party" enrolled in the Voluntary Party Liability Exemption Program **and** the questions in Section 2 direct otherwise. Information on to whom and where to send the fee is found in Section 8 of this form.
4. Send the completed request, supporting materials and the fee to the appropriate DNR regional office where the Property is located. See the map on the last page of this form. A paper copy of the signed form and all reports and supporting materials shall be sent with an electronic copy of the form and supporting materials on a compact disk. For electronic document submittal requirements see: http://dnr.wi.gov/files/PDF/pubs/rr/RR690.pdf"

The time required for DNR's determination varies depending on the complexity of the site, and the clarity and completeness of the request and supporting documentation.
