REVIEWED

Dear Ms. Sylvester:

On behalf of Gunderson Cleaners, LLC, Terracon Consultants, Inc. (Terracon) has prepared this groundwater data transmittal for the November 19, 2010 and February 22, 2011 groundwater sampling events at the above-referenced site. Please find attached a Site Location Map (Figure 1), Groundwater Contour Maps (Figures 2 and 3), Monitoring Well Hydrographs (Figures 4 and 5), Groundwater Contaminant Trend graphs (Figures 6 through 13), a Groundwater Elevation Summary table (Table 1), a Groundwater Analytical Summary table (Table 2), and a Natural Attenuation Analytical Summary table (Table 3). A copy of the laboratory analytical reports with the chain-of-custody record and field sampling sheets for each round are also attached.

As shown on Figures 2 and 3, the groundwater flow direction during both the November 2010 and February 2011 sampling events is very similar with a northeasterly flow from MW-4 toward MW-6 on the northern portion of the site with a horizontal gradient of 0.013 feet per foot (ft/ft) and south-westerly flow on the southwestern portion with a 0.014 ft/ft horizontal gradient. Although there are only two mid-level piezometers (PZ-3 and PZ-6) and two deep piezometers (PZ-4 and PZ-5), the general flow direction at the mid-level potentiometric surface is to the southwest, but is generally to the northeast at the deep potentiometric surface. During recent sampling events it has been noted that multiple flushmounts are in need of repairs and/or replacement.

A comparison of water levels in the observation well/mid-level piezometer well nests during the November 2010 and February 2011 sampling events are shown below. A positive number indicates a downward component and a negative number indicates an upward component.

Well Nest	November 2010 Event	February 2011 Event
MW-11/PZ-3	0.013	0.006
MW-15/PZ-6	0.008	0.005
MW-9/PZ-5	0.073	0.073
MW-14/PZ-4	-0.019	-0.022

During the November 2010 and February 2011 sampling event, monitoring wells MW-8, MW-9, MW11, MW-13, MW-15, PZ-3, PZ-4 and PZ-6 were sampled using low-flow groundwater sampling techniques. A peristaltic pump and Horiba U-22 water quality meter were used to pump and monitor the temperature and natural attenuation parameters including pH, dissolved oxygen (DO), oxidation-reduction potential (ORP), and specific conductance of the groundwater during purging. The measurements were recorded every 5 to 10 minutes until the parameters stabilized. Generally, parameters were considered stabilized when three consecutive readings had less than 10% difference from the previous reading. Measurements were recorded on the attached field sampling sheets for each well. The final parameter measurements are shown on the attached Table 3. Oxidation-reduction potential (ORP) measurements from monitoring wells MW-9, MW-15 and PZ-6 are indicative of reductive dechlorination during both groundwater sampling events. In addition, ORP measurements from monitoring well MW-11 during the November 2010 event is indicative of reductive chlorination. Dissolved oxygen measurements taken from monitoring wells MW-8, MW-9, MW-15, PZ-4, and PZ-6 during the February 2011 sampling event were also indicative of a reductive dechlorination environment.

The results indicated that VOCs were detected above the laboratory limit of detection (LOD) in all of the monitoring wells sampled during both sampling events. The most recent results are shown below. Historical results are presented in Table 2.

- tetrachloroethene (PCE) MW-8 (34.9 micrograms per liter (µg/L)); MW-9 (11.8 µg/L); MW-11 (7.7 µg/L); MW-13 (21.7 µg/L); MW-15 (16.0 µg/L); and PZ-4 (7.8 µg/L).
- cis-1,2-dichloroethene (cis 1,2-DCE) MW-15 (203 µg/L)

The following compounds were detected below their respective ES but above their WAC, Chapter NR 140 Groundwater Quality Preventive Action Limit (PAL) during the February 2011 sampling event:

- PCE PZ-6 (0.97 µg/L) and PZ-3 (1.1 µg/L);
- trichloroethene (TCE) MW-8 (1.2 µg/L); MW-13 (0.96 µg/L); MW-15 (2.8 µg/L); PZ-4 (0.61 µg/L); and PZ-6 (0.52 µg/L)
- cis 1,2-DCE PZ-4 (10 µg/L) and PZ-6 (13.6 µg/L);
- chloromethane MW-13 (2.2 µg/L) and PZ-4 (10 µg/L);
- benzene MW-13 (0.52 µg/L);
- methylene chloride MW-9 (0.50 µg/L); MW-11 (1.1 µg/L); MW-13 (1.4 µg/L); and PZ-6 (0.79 µg/L).

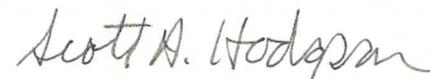

Groundwater contaminant concentration trend graphs for the eight sampled monitoring wells are attached as Figures 6 through 13.

The next (last) round of sampling is scheduled to take place in May 2011. If you have questions or require additional information, please do not hesitate to contact our office at (414) 423-0255.

Sincerely,

Renee N. Ransom

*Depth to groundwater is measured from the top of the riser pipe.

** PVC casing was cut down and resurveyed due to heaving

Measurements are in feet.

Reference elevations per Table 2 of Supplemental Site Investigation Report dated June 2006

% Difference in Concentration ³		<0.5	>BG	<50	>BG	>BG	>BG	Present	Present	>20,000	<BG	<1

- Indicates data not collected or not valid

¹Average background concentration estimated using monitoring wells MW-4, MW-6, MW-10, MW-14, and PZ-5

²Average concentration in plume estimated using monitoring wells MW-8, MW-9, MW-11, MW-13, MW-15, PZ-3, PZ-4, and PZ-6

³Difference between average plume and average background concentrations divided by average background concentration

NA - calculation not applicable in determining likelihood of natural attenuation in the form of reductive dechlorination

mg/L - milligrams per liter

µg/L - micrograms per liter

< - Indicates below limit of detection.

ORP (mV) - oxidation - reduction potential (measured in millivolts)

Bold font - results indicative of natural attenuation in the form of reductive dechlorination.

RE: Project: 38077001 GUNDERSON CLEANERS
Pace Project No.: 4039978

Dear Renee Ransom:

Enclosed are the analytical results for sample(s) received by the laboratory on November 23, 2010. The results relate only to the samples included in this report. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kang Khang

PROJECT NARRATIVE

Project: 38077001 GUNDERSON CLEANERS
Pace Project No.: 4039978

Method: EPA 8260
Description: 8260 MSV
Client: Terracon, Inc. - Franklin
Date: December 09, 2010

General Information:

10 samples were analyzed for EPA 8260. All samples were received in acceptable condition with any exceptions noted below.

Hold Time:

The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):

All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:

All criteria were within method requirements with any exceptions noted below.

Internal Standards:

All internal standards were within QC limits with any exceptions noted below.

Surrogates:

All surrogates were within QC limits with any exceptions noted below.

Method Blank:

All analytes were below the report limit in the method blank with any exceptions noted below.

Laboratory Control Spike:

All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

Duplicate Sample:

All duplicate sample results were within method acceptance criteria with any exceptions noted below.

Additional Comments:

This data package has been reviewed for quality and completeness and is approved for release.

QUALIFIERS

Project: 38077001 GUNDERSON CLEANERS
Pace Project No.: 4039978

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is NELAP accredited. Contact your Pace PM for the current list of accredited analytes.

RE: Project: 38077004 GUNDERSON CLEANERS
Pace Project No.: 4042843

Dear Scott Hodgson:

Enclosed are the analytical results for sample(s) received by the laboratory on February 25, 2011. The results relate only to the samples included in this report. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kang Khang

PROJECT NARRATIVE

Project: 38077004 GUNDERSON CLEANERS
Pace Project No.: 4042843

Method: EPA 8260
Description: 8260 MSV
Client: Terracon, Inc. - Franklin
Date: March 02, 2011

General Information:

10 samples were analyzed for EPA 8260. All samples were received in acceptable condition with any exceptions noted below.

Hold Time:

The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):

All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:

All criteria were within method requirements with any exceptions noted below.

Internal Standards:

All internal standards were within QC limits with any exceptions noted below.

Surrogates:

All surrogates were within QC limits with any exceptions noted below.

Method Blank:

All analytes were below the report limit in the method blank with any exceptions noted below.

Laboratory Control Spike:

All laboratory control spike compounds were within QC limits with any exceptions noted below.

QC Batch: MSV/10522

L0: Analyte recovery in the laboratory control sample (LCS) was outside QC limits.

- LCSD (Lab ID: 418600)
- Vinyl chloride

Matrix Spikes:

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: MSV/10522

A matrix spike and matrix spike duplicate (MS/MSD) were performed on the following sample(s): 4042813006

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

- MSD (Lab ID: 418654)
- 1,1-Dichloroethane

Duplicate Sample:

All duplicate sample results were within method acceptance criteria with any exceptions noted below.

Additional Comments:

This data package has been reviewed for quality and completeness and is approved for release.

QUALIFIERS

Project: 38077004 GUNDERSON CLEANERS
Pace Project No.: 4042843

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is NELAP accredited. Contact your Pace PM for the current list of accredited analytes.

LABORATORIES

PASI-G Pace Analytical Services - Green Bay

ANALYTE QUALIFIERS

- D6 The relative percent difference (RPD) between the sample and sample duplicate exceeded laboratory control limits.
- L0 Analyte recovery in the laboratory control sample (LCS) was outside QC limits.
- L3 Analyte recovery in the laboratory control sample (LCS) exceeded QC limits. Analyte presence below reporting limits in associated samples. Results unaffected by high bias.
- M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
- Z3 Methylene chloride is a common laboratory contaminant. Results for this analyte should be considered estimated unless the amount found in the sample is 3 to 5 times higher than that found in the method blank.

Sample Condition Upon Receipt

Client Name: Jerridon

Project # 40W2843

Courier: Fed Ex UPS USPS Client Commercial Pace Other _____

Tracking #: _____
