Douglas Polzean
P.O. Box 47
Kewaskum, WI 53040

Dear Mr. Polzean,

Enclosed is our "Supplemental Site Investigation Report" concerning the Herriges Oil Bulk Plant site at 230 Prospect Street in Kewaskum, Wisconsin. This report presents the complete data from all investigation activities.

According to the data collected during the investigation, it is the conclusion of METCO that under existing conditions and limitations, the extent and degree of petroleum contamination has been adequately defined in soil and groundwater to warrant a completed investigation as defined by the WDNR guidelines and regulations.

Based on the results of the investigation, METCO recommends that the Herriges Oil Bulk Plant site be **"closed"** for the following reasons:

1) The extent and degree of petroleum contamination in soil and groundwater has been adequately defined.

2) NR720 Direct Contact RCL exceedances exist, but will be addressed by a cap (gravel, grass, concrete, asphalt, and on-site building).

3) There was no free product encountered in any monitoring wells or soil borings.

4) Contaminant trends in groundwater appear to be stable to decreasing.

5) Based on the results of the sub slab vapor sampling, the risk of vapor intrusion appears unlikely.

6) The Village of Kewaskum has two municipal water supply wells within 1,200 feet of the subject property. Well #4 is located approximately 1,100 feet to the north-northwest of the subject property. Well #2 is located approximately 1,150 feet to the east of the subject property. These two wells are located upgradient and side gradient of the local groundwater flow and do not appear to be at risk. There are no known private water supply wells in the area of the subject property.

We appreciate the opportunity to be of service to you on this project. Should you have any questions or require additional information, do not hesitate to contact our La Crosse office.

Sincerely,

Eric Dahl
Hydrogeologist

C: Lee Delcore – WDNR

EXECUTIVE SUMMARY

The subject property had operated as a bulk petroleum storage facility from approximately 1920s or 1930s until 2001. The bulk petroleum storage facility consisted of five 15,000-gallon above ground storage tanks (ASTs) that contained gasoline (2), diesel, and fuel oil (2). The bulk petroleum storage facility was removed from the property in May 2001. After the bulk petroleum storage facility was removed from the property, a pole shed was constructed on the property, which is used for storage.

On April 10, 1996, Miller Engineers of Sheboygan, Wisconsin conducted a preliminary soil sampling at the subject property. During this project, one soil sample was collected from the area of the bulk petroleum storage facility and submitted for laboratory analysis (DRO and GRO). The laboratory results showed 15,100 ppm DRO and 440 ppm GRO. However, it should be noted that there is no documentation of the location from where this soil sample was collected or its depth. The petroleum contamination was subsequently reported to the WDNR, who then required that a site investigation be conducted.

On June 1, 2012, Alpha Terra Science, Inc. completed ten hand auger borings to 1-foot with soil samples collected for PID analysis. Two of the soil samples were submitted for laboratory analysis (PVOC and Naphthalene). The soil analytical results confirmed that petroleum contamination was present in the area of the former loading rack.

The site investigation consisted of three Geoprobe/Drilling Projects, sub slab vapor sampling, four rounds of groundwater sampling, and monitoring well abandonment. The results of the investigation show that released petroleum products have impacted the local soil and groundwater. Results of the investigation are as follows:

- Possible fill material consisting of black clayey gravel to gravelly sand to gravel to limestone screenings was encountered in numerous soil borings from ground surface to depths ranging from 3 to 6 feet bgs.

- Local unconsolidated materials generally consist of brown to black gravelly clay to silty clay to clay from ground surface to at least 16 feet below ground surface (bgs). One to two-foot thick lenses of clayey sand, sand, and sandy gravel were encountered in this unit in numerous soil borings.

- According to data collected from the monitoring wells, the depth to groundwater ranges from 3.25 to 11.63 feet bgs depending on well location and time of year. The local horizontal groundwater flow in the immediate area of the subject property is generally toward the southeast.

- Multiple areas of unsaturated soil contamination, which exceed the NR720 Direct Contact RCL's exist in the area of the removed AST systems. There are two areas of unsaturated soil contamination which exceed the NR720 Direct Contact RCL's for PAH compounds. The first area exists in the area of the removed ASTs and extending to the west, north, and east, which measures approximately 200 feet long, 87 feet wide and up to 4 feet thick. The second area exists to the southeast of the removed ASTs and measures approximately 16 feet long, 14 feet wide and up to 4 feet thick. An area of unsaturated soil contamination which exceeds the NR720 Direct Contact RCL's for PVOCs exists in the area of the removed ASTs and measures approximately 33 feet long, 11 feet wide and up to 4 feet thick.

- An area of unsaturated soil contamination which exceeds the NR720 Groundwater RCL's for PVOCs and Lead exists in the area of the former ASTs and measures approximately 155 feet long, 75 feet wide and up to 4.5 feet thick.

- A dissolved phase contaminant plume exceeding the NR140 ES/PAL has formed at the watertable in the area of the removed ASTs and has migrated toward the southeast. This plume is approximately 183 feet long and up to 95 feet wide.

- Based on the most recent groundwater analytical results (3/25/2020); monitoring well MW-1 shows a NR140 ES exceedance for Benzene (22.5 ppb); monitoring well MW-2 shows an NR140 ES exceedance for Benzene (17.7 ppb), Benzo(a)pyrene (0.35 ppb), Benzo(b)fluoranthene (0.74 ppb), and Chrysene (.038 ppb); monitoring well MW-3 shows a NR140 PAL exceedance for Benzo(b)fluoranthene (0.0234 ppb); and monitoring well MW-5 shows a NR140 PAL exceedance for Benzo(b)fluoranthene (0.0234 ppb). None of the other monitoring wells show any NR140 ES or PAL exceedances for any contaminants of concern.

- Based on the receptor survey, there does not appear to be any risk to any potable wells, or surface waters, contaminant migration along utility corridors, or potential vapor intrusion to any buildings

According to the data collected during the investigation, it is the conclusion of METCO that under existing conditions and limitations, the extent and degree of petroleum contamination has been adequately defined in soil and groundwater to warrant a completed investigation as defined by the WDNR guidelines and regulations.

Based on the results of the investigation, METCO recommends that the Herriges Oil Bulk Plant site be **"closed"** for the following reasons:

1) The extent and degree of petroleum contamination in soil and groundwater has been adequately defined.

2) NR720 Direct Contact RCL exceedances exist, but will be addressed by a cap (gravel, grass, concrete, asphalt, and on-site building).

3) There was no free product encountered in any monitoring wells or soil borings.

4) Contaminant trends in groundwater appear to be stable to decreasing.

5) Based on the results of the sub slab vapor sampling, the risk of vapor intrusion appears unlikely.

6) The Village of Kewaskum has two municipal water supply wells within 1,200 feet of the subject property. Well #4 is located approximately 1,100 feet to the north-northwest of the subject property. Well #2 is located approximately 1,150 feet to the east of the subject property. These two wells are located upgradient and side gradient of the local groundwater flow and do not appear to be at risk. There are no known private water supply wells in the area of the subject property.

LIST OF ACRONYMS

AST - Aboveground Storage Tank
ASTM - American Society for Testing and Materials
Cd - Cadmium
DOT - Department of Transportation
DRO - Diesel Range Organics
ES - Enforcement Standards
gpm - gallons per minute
GRO - Gasoline Range Organics
HNU - brand name for Photoionization Detector
ID - inside-diameter
LAST - Leaking Aboveground Storage Tank
LUST - Leaking Underground Storage Tank
MSL - Mean Sea Level
MTBE - Methyl-tert-butyl ether
MW - Monitoring Well
NIOSH - National Institute for Occupational Safety & Health
NR - Natural Resources
OD - outside-diameter
PAH - Polynuclear Aromatic Hydrocarbons
PAL - Preventive Action Limits
Pb - Lead
PECFA - Petroleum Environmental Cleanup Fund
PID - Photoionization Detector
POTW - Publicly Owned Treatment Works
ppb ug/kg - parts per billion
ppm mg/kg - parts per million
psi - pounds per square inch
PVC - Polyvinyl Chloride
PVOC - Petroleum Volatile Organic Compounds
RAP - Remedial Action Plan
scfm - standard cubic feet per minute
SVE - Soil Vapor Extraction
USCS - Unified Soil Classification System
USGS - United States Geological Survey
UST - Underground Storage Tank
VOC - Volatile Organic Compounds

1.0 INTRODUCTION AND BACKGROUND

A Site Investigation is required by the Wisconsin Department of Natural Resources (WDNR) by authority of Section 292.11 of the Wisconsin Statutes. According to the WDNR, any soil that tests more than 10 ppm Gasoline Range Organics (GRO) or Diesel Range Organics (DRO) requires an investigation. Any soil that tests more than the Chapter NR720 Groundwater Residual Contaminant Levels (RCLs), Direct Contact RCLs, and/or Soil Saturation (C-sat) Values may require possible remediation. Any groundwater that tests more than the Preventive Action Limits (PAL) or Enforcement Standards (ES) for compounds listed in Chapter NR140 Groundwater Quality Standards requires an investigation and possible remediation. For a further explanation of WDNR rules and regulations, see Appendix E.

This report presents data collected during the Site Investigation. The purpose of this investigation was to:

1) Determine the extent and degree of petroleum contamination in the environment.
2) Determine if any risks exist to the environment or public health.
3) As conditions warrant, bring the site to closure.

NW ¼, SE ¼, Section 9, Township 12 North, Range 19 East, Washington County

1.4 Site History

The subject property had operated as a bulk petroleum storage facility from approximately 1920s or 1930s until 2001. The bulk petroleum storage facility consisted of five 15,000-gallon above ground storage tanks (ASTs) that contained gasoline (2), diesel, and fuel oil (2). The bulk petroleum storage facility was removed from the property in May 2001. After the bulk petroleum storage facility was removed from the property, a pole shed was constructed on the property, which is used for storage.

On April 10, 1996, Miller Engineers of Sheboygan, Wisconsin conducted preliminary soil sampling at the subject property. During this project, one soil sample was collected from the area of the bulk petroleum storage facility and submitted for laboratory analysis (DRO and GRO). The laboratory results showed 15,100 ppm DRO and 440 ppm GRO. However, it should be noted that there is no documentation of the location from where this soil sample was collected or its depth. The petroleum contamination was subsequently reported to the WDNR, who then required that a site investigation be conducted.

On June 1, 2012, Alpha Terra Science, Inc. completed ten hand auger borings to 1-foot with soil samples collected for PID analysis. Two of the soil samples were submitted for laboratory analysis (PVOC and Naphthalene). The soil analytical results confirmed that petroleum contamination was present in the area of the former loading rack.

The nearest known LUST site is the Strobel Oil & Propane Gas Inc. (BRRTS# 03-67-274840), which is located approximately 370 feet to the south of the subject property. Due to the site being down gradient and the significant distance, it does not appear that this site is affecting or being affected by the subject property.

2.0 GEOLOGY AND RECEPTORS

2.1 Regional and Local Geology and Hydrogeology

Topography and Regional Setting

According to the USGS Hydrologic Atlas, Kewaskum is located in the western portion of the Lake Michigan Basin. Present day landforms in this area were formed by continental glaciers, which advanced from the north and east scouring the bedrock surface and transporting rock debris in the ice. As the glaciers melted, this unconsolidated material was deposited on the bedrock surface. Kettle moraine deposits, which consist of permeable stratified sediments and till, exist in much of Washington County.

The elevation of the site is approximately 945 feet above Mean Sea Level (MSL). See Appendix A for site location.

Soil and Bedrock

Soil samples were described by METCO field personnel. Assisting literature included the Hydrologic Atlas, Wisconsin Geologic Logs, and Wisconsin Well Constructor Reports.

Possible fill material consisting of black clayey gravel to gravelly sand to gravel to limestone screenings was encountered in numerous soil borings from ground surface to depths ranging from 3 to 6 feet bgs.

Local unconsolidated materials generally consist of brown to black gravelly clay to silty clay to clay from ground surface to at least 16 feet below ground surface (bgs). One to two-foot thick lenses of clayey sand, sand, and sandy gravel were encountered in this unit in numerous soil borings.

Please note that this is a generalization of the local geology and may not be consistent throughout the entire investigation area.

No other characteristics concerning the local sediments such as structures, voids, layering, lenses or secondary permeability are documented at this time.

Hydrogeology

According to data collected from the monitoring wells, the depth to groundwater ranges from 3.25 to 11.63 feet bgs depending on well location and time of year.

According to the watertable measurements collected during groundwater sampling, the local horizontal groundwater flow in the immediate area of the subject property is generally toward the southeast. Groundwater Flow Direction Maps are presented in Section 6.

We are not currently aware of any existing aquitards or perched water in this area.

2.2 Receptors

Buildings, Basements, Sumps, and Utility Corridors

The extent of petroleum contamination in groundwater exceeding the NR140 ES and/or PAL extends beneath the building at 230 Prospect Street. However, based on the sub-slab vapor results, there does not appear to be any risk of vapor intrusion to the building.

Numerous utility corridors (sanitary sewer, water, telephone/fiber optic, natural gas, and

electric) exist within the area of the NR140 ES/PAL contaminant plume in groundwater and/or the area of soil contamination exceeding the NR720 RCLs. A telephone/fiber optic line, natural gas line, electric line and sewer line all exist in the area of unsaturated soil contamination exceeding the NR720 Direct Contact RCLs. A sewer and water line exist in the area of the NR140 ES/PAL contaminant plume. The sewer line exists at 6-8 feet bgs and is backfilled with native material. Natural gas, electric, and telephone/fiber optic lines typically exist at 2-3 feet bgs and are likely backfilled with native material. The water main is buried at 6 feet bgs is backfilled with native material. Since all of these utilities are backfilled with native soil, it is unlikely they are acting as contaminant migration pathways.

Municipal and Private Water Supply Wells

The subject property and surrounding properties are all served by the Village of Kewaskum municipal water supply. The village has four municipal water supply wells, two of which are within 1,200 feet of the subject property. Well #4 is located approximately 1,100 feet to the north-northwest of the subject property. Well #2 is located approximately 1,150 feet to the east of the subject property. There are no known private water supply wells in the area of the subject property. Since the two municipal wells within 1,200 feet of the subject property are located up gradient and side gradient of the local groundwater flow direction, there does not appear to be any risk to the municipal wells.

Surface Waters

The nearest surface water is the Milwaukee River, which exists approximately 950 feet to the southeast of the subject property. It does not appear that the soil or groundwater contamination has migrated to any surface waters.

METCO is not currently aware of any other impacts, receptors, risks, or local problems associated with the subject property.

3.0 SITE INVESTIGATION RESULTS AND RISK CRITERIA

3.1 Methods of Investigation

Workscope

The workscope performed for the LUST Investigation included the following:

1) On January 17, 2019, METCO prepared a Site Investigation Field Procedures workplan.
2) On March 25-26, 2019, METCO personnel supervised the completion of fifteen Geoprobe borings (G-1 through G-15) and five monitoring wells (MW-1 through MW-5). Ninety-eight soil samples and fifteen groundwater samples were collected for field and/or laboratory analysis. Upon completion, the monitoring wells were properly developed.
3) On June 18, 2019, METCO personnel collected groundwater samples from five monitoring wells (MW-1, MW-2, MW-3, MW-4, and MW-5) for laboratory analysis (Round 1). During the groundwater sampling event, hydraulic conductivity tests were performed on three monitoring wells (MW-1, MW-2, and MW-5). The monitoring well network was also surveyed by Fauerbach Surveying & Engineering of Hillsboro, Wisconsin.
4) On September 10, 2019, METCO personnel collected groundwater samples from five monitoring wells (MW-1, MW-2, MW-3, MW-4, and MW-5) for laboratory analysis (Round 2).
5) On September 10, 2019, Braun Intertec installed three sub-slab vapor sampling ports (SS-1, SS-2, and SS-3) in the slab on grade building on the subject property and collected vapor samples from the three sub-slab vapor sampling ports.

6) On December 9, 2019, METCO personnel supervised the completion of six Geoprobe borings (G-16 through G-21) and two monitoring wells (MW-6 and MW-7). Fourteen soil samples were collected for field and/or laboratory analysis. Upon completion, the monitoring wells were not developed as they were dry.
7) On January 6, 2020, METCO personnel collected groundwater samples from seven monitoring wells (MW-1 through MW-7) for laboratory analysis (Round 3). The two new monitoring wells (MW-6 and MW-7) were surveyed to msl by METCO personnel
8) On March 25, 2020, METCO personnel collected groundwater samples from seven monitoring wells (MW-1 through MW-7) for laboratory analysis (Round 4).
9) On June 29, 2020, METCO personnel abandoned the seven monitoring wells (MW-1 through MW-7).
10) On March 8, 2021, METCO personnel supervised the completion of twelve Geoprobe borings (G-22 through G-33). Twelve soil samples were collected for field and/or laboratory analysis.

Site Access Problems

No site access permission problems were encountered during the site investigation.

Analytical Methods

All samples were collected in a manner as to maintain their quality and to eliminate any possible cross contamination. METCO did not deviate from any WDNR or laboratory recommended procedures for sample collection, preservation, or transportation on this project to our knowledge.

Equipment advanced into the subsurface was cleaned between sampling locations. Cleaning consisted of washing with a biodegradable Alconox solution and rinsing with potable water. Disposable equipment was not cleaned, but immediately disposed of after use.

All samples were constantly kept on ice in a cooler and hand delivered to the laboratory.

3.2 Data Discussion

Soil Sampling Data

On March 25-26, 2019, METCO personnel supervised the completion of fifteen Geoprobe borings (G-1 through G-15) and five monitoring wells (MW-1 through MW-5). Ninety-eight soil samples were collected for field and/or laboratory analysis (PID, Lead, PVOC, Naphthalene, PAH, TCLP Lead and TCLP Benzene).

On December 9, 2019, METCO personnel supervised the completion of six Geoprobe borings (G-16 thru G-21) and two monitoring wells (MW-6 and MW-7). Fourteen soil samples were collected for field and/or laboratory analysis (PID and PAH).

On March 8, 2021, METCO personnel supervised the completion of twelve Geoprobe borings (G-22 thru G-33). Twelve soil samples were collected for field and/or laboratory analysis (PVOC, PID, and PAH).

Soil analytical results are summarized in the Soil Analytical Results Tables with exceedances of the NR720 Groundwater RCL values noted.

Soil sample locations are presented in the Detailed Site Map found in Section 6. All data is presented in the data tables in Section 7. The laboratory reports from the March 2019 and December 2019 sampling are presented in Appendix B of the Site Investigation Report dated June 10, 2020. The laboratory reports from the March 2021 sampling are presented in Appendix B of this Site Investigation Report.

Risk Based Approach for Addressing PAH Non-Industrial Direct Contact RCL Exceedances

The WDNR NR722.11 risk assessment approach for calculating cPAH non-industrial direct contact RCLs was used to further evaluate the risks associated with the PAH contamination in soil. This approach evaluates the carcinogenic PAH compounds on a cumulative basis only, rather than on an individual compound basis and a cumulative basis. The results of this risk assessment are as follows:

G-1/G-30

Soil sample G-1-1, collected at 3.5 feet bgs, showed NR720 Direct Contact RCL exceedances for Benzo(a)Anthracene (2.46 ppm), Benzo(a)Pyrene (3.6 ppm), Benzo(b)Fluoranthene (5 ppm), Dibenzo(a,h)Anthracene (0.239 ppm), and Indeno(1,2,3-cd)Pyrene (2.61 ppm).

Soil sample G-30-1, was collected at 1.5 feet bgs in the same location as soil boring G-1 and showed no NR720 Direct Contact RCL exceedances.

The cPAH calculations for soil sample G-1-1 showed a cumulative cancer risk of 4.2×10^{-5}, which exceeds the target cancer risk of 5×10^{-6} and thus must still be considered a direct contact risk. This area is currently covered in asphalt and maintenance of this asphalt cap will likely be required by the WDNR upon site closure.

G-3/G-24

Soil sample G-3-1, collected at 3.5 feet bgs, showed NR720 Direct Contact RCL exceedances for Benzo(a)Anthracene (1.71 ppm), Benzo(a)Pyrene (2.22 ppm), Benzo(b)Fluoranthene (3.3 ppm), Dibenzo(a,h)Anthracene (0.13 ppm), Indeno(1,2,3-cd)Pyrene (1.57 ppm), 1-Methylnaphthalene (19.6 ppm), and Naphthalene (12.6 ppm).

Soil sample G-24-1, was collected at 1.5 feet bgs in the same location as soil boring G-3 and showed no NR720 Direct Contact RCL exceedances.

The cPAH calculations for soil sample G-3-1 showed a cumulative cancer risk of 2.6×10^{-5}, which exceeds the target cancer risk of 5×10^{-6} and thus must still be considered a direct contact risk. This area is currently covered in gravel. Since the shallow soil sample from G-24 at 1.5 feet did not show any NR720 Direct Contact RCL exceedances, maintenance of this gravel cap will be sufficient as a WDNR mandated institutional control upon site closure.

G-5/G-25

Soil sample G-5-1, collected at 3 feet bgs, showed NR720 Direct Contact RCL exceedances for Benzo(a)Anthracene (2.83 ppm), Benzo(a)Pyrene (5 ppm), Benzo(b)Fluoranthene (7.4 ppm), Dibenzo(a,h)Anthracene (1.33 ppm), Indeno(1,2,3-cd)Pyrene (4.6 ppm), 1-Methylnaphthalene (33 ppm), and Naphthalene (8.2 ppm).

Soil sample G-25-1, was collected at 1.5 feet bgs in the same location as soil boring G-5 and showed no NR720 Direct Contact RCL exceedances.

The cPAH calculations for soil sample G-5-1 showed a cumulative cancer risk of 6.8×10^{-5}, which exceeds the target cancer risk of 5×10^{-6} and thus must still be considered a direct contact risk. This area is currently covered in gravel. Since the shallow soil sample from G-25 at 1.5 feet did not show any NR720 Direct Contact RCL exceedances, maintenance of this gravel cap will be sufficient as a WDNR mandated institutional control upon site closure.

G-6

Soil sample G-6-1, collected at 3.5 feet bgs, showed a NR720 Direct Contact RCL exceedance for Benzo(a)Pyrene (0.79 ppm).

The cPAH calculations for soil sample G-6-1 showed a cumulative cancer risk of 9.3×10^{-6}, which exceeds the target cancer risk of 5×10^{-6} and thus must still be considered a direct contact risk. This area is currently covered in gravel. Since three feet of gravel fill was documented in this area, maintenance of this gravel cap will be sufficient as a WDNR mandated institutional control upon site closure.

G-10

Soil sample G-10-1, collected at 3.5 feet bgs, showed a NR720 Direct Contact RCL exceedance for Benzo(a)Pyrene (0.41 ppm).

The cPAH calculations for soil sample G-10-1 showed a cumulative cancer risk of 4.9×10^{-6}, which is less than the target cancer risk of 5×10^{-6} and thus does not appear to be a direct contact risk.

G-11/G-23

Soil sample G-11-1, collected at 3.5 feet bgs, showed NR720 Direct Contact RCL exceedances for Benzo(a)Anthracene (66 ppm), Benzo(a)Pyrene (58 ppm), Benzo(b)Fluoranthene (78 ppm), Benzo(k)Fluoranthene (27 ppm), Dibenzo(a,h)Anthracene (2.89 ppm), and Indeno(1,2,3-cd)Pyrene (28.1 ppm).

Soil sample G-23-1, was collected at 1.5 feet bgs in the same location as soil boring G-11 and showed NR720 Direct Contact RCL exceedances for Benzo(a)Anthracene (50 ppm), Benzo(a)Pyrene (47 ppm), Benzo(b)Fluoranthene (53 ppm), Benzo(k)Fluoranthene (19.6 ppm), Dibenzo(a,h)Anthracene (5.5 ppm), and Indeno(1,2,3-cd)Pyrene (29.5 ppm).

The cPAH calculations for soil sample G-11-1 showed a cumulative cancer risk of 6.8×10^{-4}, which exceeds the target cancer risk of 5×10^{-6} and thus must still be considered a direct contact risk. The cPAH calculations for soil sample G-23-1 showed a cumulative cancer risk of 5.7×10^{-4}, which exceeds the target cancer risk of 5×10^{-6} and thus must still be considered a direct contact risk. This area is currently covered in gravel. The WDNR will likely require that this area be capped with concrete or asphalt and maintenance of this concrete/asphalt cap will likely be required by the upon site closure.

G-12

Soil sample G-12-1, collected at 3.5 feet bgs, showed a NR720 Direct Contact RCL exceedance for Benzo(a)Pyrene (0.116 ppm).

The cPAH calculations for soil sample G-12-1 showed a cumulative cancer risk of 1.4×10^{-6}, which is less than the target cancer risk of 5×10^{-6} and thus does not appear to be a direct contact risk.

G-14

Soil sample G-14-1, collected at 3.5 feet bgs, showed NR720 Direct Contact RCL exceedances for Benzo(a)Pyrene (0.92 ppm) and Benzo(b)Fluoranthene (1.38 ppm).

The cPAH calculations for soil sample G-14-1 showed a cumulative cancer risk of 1.1×10^{-5}, which exceeds the target cancer risk of 5×10^{-6} and thus must still be considered a direct contact risk. This soil boring was completed off the edge of an asphalt pad and maintenance of this asphalt cap will likely be required by the WDNR upon site closure.

MW-2/G-29

Soil sample MW-2-1, collected at 3.5 feet bgs, showed NR720 Direct Contact RCL exceedances for Benzo(a)Anthracene (11.9 ppm), Benzo(a)Pyrene (11 ppm), Benzo(b)Fluoranthene (15.5 ppm), Dibenzo(a,h)Anthracene (0.59 ppm), and Indeno(1,2,3-cd)Pyrene (5.6 ppm).

Soil sample G-29-1, was collected at 1.5 feet bgs in the same location as soil boring MW-2 and showed a NR720 Direct Contact RCL exceedance for Benzo(a)Pyrene (0.87 ppm).

The cPAH calculations for soil sample MW-2-1 showed a cumulative cancer risk of 1.3×10^{-4}, which exceeds the target cancer risk of 5×10^{-6} and thus must still be considered a direct contact risk. The cPAH calculations for soil sample G-29-1 showed a cumulative cancer risk of 1.1×10^{-5}, which exceeds the target cancer risk of 5×10^{-6} and thus must still be considered a direct contact risk. This area is currently covered in asphalt and maintenance of this asphalt cap will likely be required by the WDNR upon site closure.

MW-4/G-22

Soil sample MW-4-1, collected at 3.5 feet bgs, showed NR720 Direct Contact RCL exceedances for Benzo(a)Anthracene (1.52 ppm), Benzo(a)Pyrene (1.47 ppm), and Benzo(b)Fluoranthene (2.42 ppm).

Soil sample G-22-1, was collected at 1.5 feet bgs in the same location as soil boring MW-4 and showed a NR720 Direct Contact RCL exceedance for Benzo(a)Pyrene (0.66 ppm).

The cPAH calculations for soil sample MW-4-1 showed a cumulative cancer risk of 1.8×10^{-5}, which exceeds the target cancer risk of 5×10^{-6} and thus must still be considered a direct contact risk. The cPAH calculations for soil sample G-22-1 showed a cumulative cancer risk of 8.1×10^{-6}, which exceeds the target cancer risk of 5×10^{-6} and thus must still be considered a direct contact risk. This area is currently covered in grass and maintenance of this grass cap will likely be required by the WDNR upon site closure.

G-16

Soil sample G-16-1, collected at 3.5 feet bgs, showed a NR720 Direct Contact RCL exceedance for Benzo(a)Pyrene (0.62 ppm).

The cPAH calculations for soil sample G-6-1 showed a cumulative cancer risk of 7.7×10^{-6}, which exceeds the target cancer risk of 5×10^{-6} and thus must still be considered a direct

contact risk. This area is currently covered in gravel and maintenance of this gravel cap will be sufficient as a WDNR mandated institutional control upon site closure.

G-17

Soil sample G-17-1, collected at 3.5 feet bgs, showed a NR720 Direct Contact RCL exceedance for Benzo(a)Pyrene (0.125 ppm).

The cPAH calculations for soil sample G-17-1 showed a cumulative cancer risk of 1.6×10^{-6}, which is less than the target cancer risk of 5×10^{-6} and thus does not appear to be a direct contact risk.

G-18

Soil sample G-18-1, collected at 3.5 feet bgs, showed a NR720 Direct Contact RCL exceedance for Benzo(a)Pyrene (0.116 ppm).

The cPAH calculations for soil sample G-18-1 showed a cumulative cancer risk of 1.4×10^{-6}, which is less than the target cancer risk of 5×10^{-6} and thus does not appear to be a direct contact risk.

G-20

Soil sample G-20-1, collected at 3.5 feet bgs, showed a NR720 Direct Contact RCL exceedance for Benzo(a)Pyrene (0.298 ppm).

The cPAH calculations for soil sample G-20-1 showed a cumulative cancer risk of 3.8×10^{-6}, which is less than the target cancer risk of 5×10^{-6} and thus does not appear to be a direct contact risk.

G-21

Soil sample G-21-1, collected at 3.5 feet bgs, showed a NR720 Direct Contact RCL exceedance for Benzo(a)Pyrene (0.267 ppm).

The cPAH calculations for soil sample G-21-1 showed a cumulative cancer risk of 3.4×10^{-6}, which is less than the target cancer risk of 5×10^{-6} and thus does not appear to be a direct contact risk.

Groundwater Sampling Data

On March 25-26, 2019, METCO personnel supervised the completion of fifteen Geoprobe borings (G-1 thru G-15). Fifteen groundwater samples were collected for laboratory analysis (PVOC and Naphthalene). Five monitoring wells (MW-1 through MW-5) were also installed.

On June 18, 2019, METCO personnel collected groundwater samples from five monitoring wells (MW-1 through MW-5) for laboratory analysis (Dissolved Lead, VOC, PAH, Nitrate/Nitrite, Sulfate, Dissolved Iron and Manganese). Water level, dissolved oxygen, pH, ORP, specific conductance, and temperature measurements were collected from all sampled monitoring wells.

On September 10, 2019, METCO personnel collected groundwater samples from five monitoring wells (MW-1 through MW-5) for laboratory analysis (PVOC and PAH). Water level, dissolved oxygen, pH, ORP, specific conductance, and temperature measurements were collected from all sampled monitoring wells.

On December 9, 2019, METCO personnel supervised the completion two monitoring wells (MW-6 and MW-7).

On January 6, 2019, METCO personnel collected groundwater samples from seven monitoring wells (MW-1 through MW-7) for laboratory analysis (PVOC, VOC and PAH). Water level, dissolved oxygen, pH, ORP, specific conductance, and temperature measurements were collected from all sampled monitoring wells.

On March 25, 2019, METCO personnel collected groundwater samples from seven monitoring wells (MW-1 through MW-7) for laboratory analysis (PVOC and PAH). Water level, dissolved oxygen, pH, ORP, specific conductance, and temperature measurements were collected from all sampled monitoring wells.

On June 29, 2020, METCO personnel abandoned the seven monitoring wells (MW-1 through MW-7).

Geoprobe groundwater and monitoring well analytical results are summarized in the Groundwater Analytical Tables with exceedances of the NR140 Preventive Action Limits (PAL) and/or Enforcement Standard (ES) noted.

The soil boring and monitoring well locations are presented in the Detailed Site Map in Section 6. All data is presented in the data tables in Section 7. The lab reports are presented in Appendix B of the Site Investigation Report dated June 10, 2020.

Sub-Slab Vapor Sampling Data

On September 10, 2019, Braun Intertec of La Crosse, WI installed three sub-slab vapor sampling ports (SS-1 through SS-3) in the slab-on-grade building on the subject property and collected vapor samples from the sub-slab sampling ports for PVOC and Naphthalene (TO-15) analysis.

The sub-slab vapor sampling locations are presented in the Detailed Site Map in Section 6. All data is presented in the data tables in Section 7. The lab reports are presented in Appendix B of the Site Investigation Report dated June 10, 2020.

Laboratory Certification

Synergy Environmental Lab
Wisconsin Lab Certification #445037560

3.3 Permeability and Hydraulic Conductivity

On June 18, 2019, METCO conducted a slug test on monitoring wells MW-1, MW-2 and MW-5. The slug test data was evaluated using the curve fitting program AQTESOLV developed by Glenn M Duffield, Hydrosolve, Inc.

Slug test data was evaluated using the Bouwer and Rice method. The average hydraulic gradient from the four rounds of groundwater monitoring was calculated to be 6.04×10^{-2} and the effective porosity was estimated to be 30%. Hydrogeologic parameters were estimated as follows:

Monitoring Well MW-1
Hydraulic Conductivity (K) = 1.13×10^{-3} cm/sec
Transmissivity = 1.04×10^{-2} cm^2/sec
Flow Velocity (V=KI/n) = 72.0252 m/yr

Monitoring Well MW-2
Hydraulic Conductivity (K) = 1.69×10^{-3} cm/sec
Transmissivity = 1.58×10^{-2} cm^2/sec
Flow Velocity (V=KI/n) = 107.4279 m/yr

Monitoring Well MW-5
Hydraulic Conductivity (K) = 2.31×10^{-3} cm/sec
Transmissivity = 1.08×10^{-2} cm^2/sec
Flow Velocity (V=KI/n) = 146.8132 m/yr

Since the thickness of the unconfined aquifer was unknown, the bottoms of monitoring wells MW-1, -2, and -5 were assumed as the lower extent of the aquifer for calculation purposes.

Flow velocity calculations are presented in Appendix E of the Site Investigation Report dated June 10, 2020.

3.4 Discussion of Results

The site investigation consisted of three Geoprobe/Drilling Projects, sub slab vapor sampling, four rounds of groundwater sampling, and monitoring well abandonment. The results of the investigation show that released petroleum products have impacted the local soil and groundwater. Results of the investigation are as follows:

- Possible fill material consisting of black clayey gravel to gravelly sand to gravel to limestone screenings was encountered in numerous soil borings from ground surface to depths ranging from 3 to 6 feet bgs.

- Local unconsolidated materials generally consist of brown to black gravelly clay to silty clay to clay from ground surface to at least 16 feet below ground surface (bgs). One to two-foot thick lenses of clayey sand, sand, and sandy gravel were encountered in this unit in numerous soil borings.

- According to data collected from the monitoring wells, the depth to groundwater ranges from 3.25 to 11.63 feet bgs depending on well location and time of year. The local horizontal groundwater flow in the immediate area of the subject property is generally toward the southeast.

- Multiple areas of unsaturated soil contamination, which exceed the NR720 Direct Contact RCL's exist in the area of the removed AST systems. There are two areas of unsaturated soil contamination which exceed the NR720 Direct Contact RCL's for PAH compounds. The first area exists in the area of the removed ASTs and extending to the west, north, and east, which measures approximately 200 feet long, 87 feet wide and up to 4 feet thick. The second area exists to the southeast of the removed ASTs and measures approximately 16 feet long, 14 feet wide and up to 4 feet thick. An area of unsaturated soil contamination which exceeds the NR720 Direct Contact RCL's for PVOCs exists in the area of the removed ASTs and measures approximately 33 feet long, 11 feet wide and up to 4 feet thick.

- An area of unsaturated soil contamination which exceeds the NR720 Groundwater RCL's for PVOCs and Lead exists in the area of the former ASTs and measures approximately 155 feet long, 75 feet wide and up to 4.5 feet thick.

- A dissolved phase contaminant plume exceeding the NR140 ES and/or PAL has formed at the watertable in the area of the removed ASTs and has migrated toward the southeast. This plume is approximately 183 feet long and up to 95 feet wide.

- Based on the most recent groundwater analytical results (3/25/2020); monitoring well MW-1 shows a NR140 ES exceedance for Benzene (22.5 ppb); monitoring well MW-2 shows an NR140 ES exceedance for Benzene (17.7 ppb), Benzo(a)pyrene (0.35 ppb), Benzo(b)fluoranthene (0.74 ppb), and Chrysene (.038 ppb); monitoring well MW-3 shows a NR140 PAL exceedance for Benzo(b)fluoranthene (0.0234 ppb); and monitoring well MW-5 shows a NR140 PAL exceedance for Benzo(b)fluoranthene (0.0234 ppb). None of the other monitoring wells show any NR140 ES or PAL exceedances for any contaminants of concern.

- Based on the receptor survey, there does not appear to be any risk to any potable wells, or surface waters, contaminant migration along utility corridors, or potential vapor intrusion to any buildings

To our knowledge, this investigation has not had any major difficulties, unanticipated results, or questionable results.

The Location Map, Detailed Site Map, Soil Contamination Map, Groundwater Flow Direction Maps, Groundwater Isoconcentration Map, and Geologic Cross- Section Figures, which visually define the extent of contamination, are presented in Section 6.

3.5 Risk Assessment

Per the NR746.03 definitions a release from petroleum tanks is considered "high risk" if any of the four following criteria are met:

1) Verified contaminant concentrations in a private or public potable well that exceeds the Preventive Action Limit established under Chapter, Stats. 160.
2) Petroleum product that is not in the dissolved phase (floating product) is present with a thickness of 0.01 feet or more and verified by more than one sampling event.
3) An Enforcement Standard exceedance in groundwater within 1,000 feet of a well operated by a public utility, or within 100 feet of any other well used to provide water for human consumption.
4) An Enforcement Standard exceedance in fractured bedrock.

A "medium risk" site is defined as a site where contaminants have extended beyond the boundary of the source property, or there is confirmed contamination in the groundwater, but the site does not meet the definition of a "high risk" site.

A "low risk" site is defined as a site where contaminants are contained only within the soil on the source property and there is no confirmed contamination in groundwater.

Based on the NR746.03 definitions, the Hanson Property site is currently a "medium risk" site since there is confirmed groundwater contamination.

4.0 CONCLUSION

4.1 Investigation Summary

According to the data collected during the investigation, it is the conclusion of METCO that under existing conditions and limitations, the extent and degree of petroleum contamination has been adequately defined in soil and groundwater to warrant a completed investigation as defined by the WDNR guidelines and regulations.

4.2 Recommendations

Based on the results of the investigation, METCO recommends that the Herriges Oil Bulk Plant site be **"closed"** for the following reasons:

1) The extent and degree of petroleum contamination in soil and groundwater has been adequately defined.

2) NR720 Direct Contact RCL exceedances exist, but will be addressed by a cap (gravel, grass, concrete, asphalt, and on-site building).

3) There was no free product encountered in any monitoring wells or soil borings.

4) Contaminant trends in groundwater appear to be stable to decreasing.

5) Based on the results of the sub slab vapor sampling, the risk of vapor intrusion appears unlikely.

6) The Village of Kewaskum has two municipal water supply wells within 1,200 feet of the subject property. Well #4 is located approximately 1,100 feet to the north-northwest of the subject property. Well #2 is located approximately 1,150 feet to the east of the subject property. These two wells are located upgradient and side gradient of the local groundwater flow and do not appear to be at risk. There are no known private water supply wells in the area of the subject property.

APPENDIX A/ METHODS OF INVESTIGATION

Geoprobe Project

Geoprobe sampling was completed by Geiss Soil and Samples LLC. of Merrill, Wisconsin and On Site Environmental Services of Sun Prairie, Wisconsin, under the supervision of METCO personnel. The Geoprobe consists of a truck or track-mounted, hydraulically driven unit that advances interconnected, 1-inch diameter, 4 foot long, and stainless steel rods into the subsurface.

Field observations such as soil characteristics, petroleum odors, and petroleum staining associated with all the collected samples were continuously noted throughout sampling. All Geoprobe holes were properly abandoned to ground level using bentonite clay.

The purpose of the Geoprobe Project was to cost effectively determine if the released contaminants have impacted the soil and groundwater and determine the general extent of contamination along those mediums. This collected information would then be used to guide the Drilling Project, if required.

Geoprobe Soil Sampling

The procedure consisted of advancing an assembled stainless steel sampler to the top of the interval to be sampled. A stop-pin was then removed, and the sampler driven until filled. The rods were retracted from the hole and the sample recovered.

Geoprobe Groundwater Sampling

This procedure consisted of advancing a stainless steel, mill slotted well point into the watertable interface. Disposable, flexible, ¼ inch diameter polyethylene tubing was then introduced through the steel rods and down to the watertable interface. A hand-held pump was used to slowly draw an undisturbed water sample into the polyethylene tube, which was then removed from the steel rods and the water sample immediately placed into sampling containers.

Drilling Project

Soil borings were conducted by Geiss Soil & Samples LLC, of Merrill, Wisconsin, and under the supervision of METCO personnel. Using a truck-mounted auger drill rig, all borings were completed in accordance with ASTM D-1452, "Soil Investigation and Sampling by Auger Boring," using 4.25-inch, inside-diameter (ID) augers. Soil sampling was conducted using a Geoprobe. Using this procedure, an assembled stainless steel sampler is advanced to the top of the interval to be sampled, a stop pin is then removed, and the sampler is driven until filled. Field observations such as soil characteristics, petroleum odors, and petroleum staining were continuously noted throughout the drilling process.

The purpose of the Drilling Project and subsequent well installation/sampling was to investigate subsurface conditions and characteristics, verify the extent of petroleum contamination in local soil and groundwater, and collect aquifer data.

Field Screening

Selected soil samples were scanned with a Rae Systems Mini RaeLite Photo-ionization Detector (PID) equipped with a 10.6 eV lamp. Metered calibrations were done at the beginning of each workday using an isobutylene standard. A quart sized Ziploc bag was filled, by gloved hand,

one-third full with the sample. The Ziploc bags were sealed and shaken vigorously for 30 seconds. Headspace development was established by allowing the sample to rest for at least 15 minutes. If ambient temperatures are below 70 degrees Fahrenheit, headspace development takes place in a heated environment, which allows the sample enough time to establish satisfactory headspace. To take readings, the PID probe was inserted through the Ziploc seal and the highest meter response recorded.

Throughout the field projects the PID Meter did not encounter any vast temperature or humidity changes, malfunctions, repairs, or any other obvious interferences that would affect its results.

Monitoring Well Installation, Development, and Sampling

Monitoring well installation was completed by Geiss Soil & Samples LLC under the supervision of METCO personnel and done in accordance with Wisconsin Department of Natural Resources Chapter NR141, "Groundwater Monitoring Well Requirements." The monitoring wells were constructed of flush threaded, 2-inch inside-diameter schedule 40 polyvinyl chloride (PVC) piping. Ten-foot well screens with 0.010-inch slots were installed partially into the groundwater, with the watertable intersecting the screen. Uniform washed sand was installed around the well screens to serve as a filter pack. Bentonite was used above the filter pack to provide an annular space seal.

Locking watertight caps along with steel flush-mounted covers were installed with the wells for protection. Monitoring Well Construction Forms and a Groundwater Monitoring Well Information Form are presented in Appendix C.

The wells were surveyed by Fauerbach Surveying & Engineering of Hillsboro, Wisconsin. Measurements were recorded in feet mean sea level.

Each well was alternately surged and purged by METCO personnel with a bottom loading, disposable, polyethylene bailer for 15-20 minutes to remove fines from the well screen. Approximately 0.25-20 gallons of groundwater was then removed with a small electrical submersible pump. Well Development Forms are presented in Appendix C.

Groundwater samples for laboratory analysis were collected using a bottom loading, disposable, polyethylene bailer and disposable, polyethylene twine. A minimum of four well volumes was purged from the well immediately before sampling.

Field observations such as color, turbidity, petroleum odors, and petroleum sheens associated with the collected samples were continuously noted throughout sampling.

Sub-Slab Soil Vapor Sampling

Sub-slab vapor sampling port installation was completed Braun Intertec under the supervision of METCO personnel. The sub-slab vapor sampling port was constructed by drilling a ½-inch pilot hole through the concrete slab and several inches into the sub slab material with a hammer drill. A 1½-inch outer hole is then drilled to depths ranging from ¾ -inch to 1-inch, depending on the concrete slab thickness. The hole was cleaned of dust and drilling debris using a shop-vac. A stainless steel vapor pin is installed in the inner hole with a silicon sleeve to obtain an air tight seal with the concrete floor. Vapor samples were collected by using a short length of Teflon tubing to connect the sampling port and a 1-liter Suma canister. The air sample was collected using a Suma canister with a flow regulator that allowed two sub-slab vapor samples to be collected over a 30 minute period. Prior to sampling, a water dam test and shut in test were completed to assure that the vapor sampling point and sampling apparatus were sealed properly.

Sample Preparation

The volume of sample, size of container, and type of sample preservation was dependent on the specific parameter for which the sample was to be analyzed. Parameter specific information is presented in the LUST Sample Guidelines located in Appendix E.

Field Sampling and Transportation Quality Control

All samples were collected in a manner as to maintain their quality and to eliminate any possible cross contamination. METCO did not deviate from any WDNR or laboratory recommended procedures for sample collection, preservation, or transportation on this project.

Equipment advanced into the subsurface was cleaned between sampling locations. Cleaning consisted of washing with a biodegradable Alconox solution and rinsing with potable water. Disposable equipment was not cleaned, but immediately disposed of after use.

All samples were constantly kept on ice in a cooler and hand delivered to the laboratory.

Laboratory Quality Control

See Appendix B for the results of any field blanks, trip blanks, temperature blanks, lab spikes, split samples, replicate spikes, and duplicates.

Investigative Wastes

On June 14, 2019 DKS Transport Services, LLC picked-up and properly disposed of 5 drums of soil cuttings at the Advanced Disposal, Seven Mile Creek Landfill in Eau Claire, Wisconsin.

On March 6, 2020 DKS Transport Services, LLC picked-up and properly disposed of 2 drums of soil cuttings at the Advanced Disposal, Seven Mile Creek Landfill in Eau Claire, Wisconsin.

Code	*Comment*
1	Laboratory QC within limits.

All solid sample results reported on a dry weight basis unless otherwise indicated. All LOD's and LOQ's are adjusted for dilutions but not dry weight. Subcontracted results are denoted by SUB in the analyst field.

(1u), (1w), (1y) and (20s) Register June 2003 No. 570, eff. 7−1−03; correction in (20) made under s. 13.92 (4) (b) 6., Stats., Register January 2012 No. 673.

Subchapter II — Groundwater Quality Standards

NR 140.10 Public health related groundwater standards. The groundwater quality standards for substances of public health concern are listed in Table 1.

Note: For all substances that have carcinogenic, mutagenic or teratogenic properties or interactive effects, the preventive action limit is 10% of the enforcement standard. The preventive action limit is 20% of the enforcement standard for all other substances that are of public health concern. Enforcement standards and preventive action limits for additional substances will be added to Table 1 as recommendations are developed pursuant to ss. 160.07, 160.13 and 160.15, Stats.

Table 1
Public Health Groundwater Quality Standards

Substance[1]	Enforcement Standard (micrograms per liter − except as noted)	Preventive Action Limit (micrograms per liter − except as noted)
Acetochlor	7	0.7
Acetochlor ethane sulfonic acid + oxanilic acid (Acetochlor − ESA + OXA)	230	46
Acetone	9 mg/l	1.8 mg/l
Alachlor	2	0.2
Alachlor ethane sulfonic acid (Alachlor − ESA)	20	4
Aldicarb	10	2
Aluminum	200	40
Ammonia (as N)	9.7 mg/l	0.97 mg/l
Antimony	6	1.2
Anthracene	3000	600
Arsenic	10	1
Asbestos	7 million fibers per liter (MFL)	0.7 MFL
Atrazine, total chlorinated residues	3[2]	0.3[2]
Bacteria, Total Coliform	0[3]	0[3]
Barium	2 milligrams/liter (mg/l)	0.4 mg/l
Bentazon	300	60
Benzene	5	0.5
Benzo(b)fluoranthene	0.2	0.02
Benzo(a)pyrene	0.2	0.02
Beryllium	4	0.4
Boron	1000	200
Bromodichloromethane	0.6	0.06

1,2,4–Trichlorobenzene	70	14
1,1,1–Trichloroethane	200	40
1,1,2–Trichloroethane	5	0.5
Trichloroethylene (TCE)	5	0.5
2,4,5–Trichlorophenoxy–propionic acid (2,4,5–TP)	50	5
1,2,3–Trichloropropane	60	12
Trifluralin	7.5	0.75
Trimethylbenzenes (1,2,4– and 1,3,5– combined)	480	96
Vanadium	30	6

Table 1 – Continued
Public Health Groundwater Quality Standards

Substance[1]	Enforcement Standard (micrograms per liter – except as noted)	Preventive Action Limit (micrograms per liter – except as noted)
Vinyl chloride	0.2	0.02
Xylene[6]	2 mg/l	0.4 mg/l

[1] Appendix I contains Chemical Abstract Service (CAS) registry numbers, common synonyms and trade names for most substances listed in Table 1.

[2] Total chlorinated atrazine residues includes parent compound and the following metabolites of health concern: 2-chloro-4-amino-6-isopropylamino-s-triazine (formerly deethylatrazine), 2-chloro-4-amino-6-ethylamino-s-triazine (formerly deisopropylatrazine) and 2-chloro-4,6-diamino-s-triazine (formerly diaminoatrazine).

[3] Total coliform bacteria may not be present in any 100 ml sample using either the membrane filter (MF) technique, the presence-absence (P-A) coliform test, the minimal medium ONPG-MUG (MMO-MUG) test or not present in any 10 ml portion of the 10-tube multiple tube fermentation (MTF) technique.

[4] "Cyanide, free" refers to the simple cyanides (HCN, CN^-) and /or readily dissociable metal-cyanide complexes. Free cyanide is regulatorily equivalent to cyanide quantified by approved analytical methods for "amenable cyanide" or "available cyanide".

[5] Dinitrotoluene, Total Residues includes the dinitrotoluene (DNT) isomers: 2,3-DNT, 2,4-DNT, 2,5-DNT, 2,6-DNT, 3,4-DNT and 3,5-DNT.

[6] Xylene includes meta-, ortho-, and para-xylene combined.

History: Cr. Register, September, 1985, No. 357, eff. 10-1-85; am. table 1, Register, October, 1988, No. 394, eff. 11-1-88; am. table 1, Register, September, 1990, No. 417, eff. 10-1-90; am. NR 140.12 Public welfare related groundwater standards. The groundwater quality standards for substances of public welfare concern are listed in Table 2.

Note: For each substance of public welfare concern, the preventive action limit is 50% of the established enforcement standard.

Table 2
Public Welfare Groundwater Quality Standards

Substance	Enforcement Standard (milligrams per liter – except as noted)	Preventive Action Limit (milligrams per liter – except as noted)
Chloride	250	125
Color	15 color units	7.5 color units
Foaming agents MBAS (Methylene-Blue Active Substances)	0.5	0.25
Iron	0.3	0.15
Manganese	0.05	0.025
Odor	3 (Threshold Odor No.)	1.5 (Threshold Odor No.)
Sulfate	250	125
Zinc	5	2.5

History: Cr. Register, September, 1985, No. 357, eff. 10-1-85; am. table 2, Register, October, 1990, No. 418, eff. 11-1-90; am. Table 2, Register, March, 1994, No. 459, eff. 4-1-94.

NR 140.14 Statistical procedures. (1) If a preventive action limit or an enforcement standard for a substance listed in Table 1 or 2, an alternative concentration limit issued in accordance with s. NR 140.28 or a preventive action limit for an indicator parameter established according to s. NR 140.20 (2) is attained or exceeded at a point of standards application:

(a) The owner or operator of the facility, practice or activity at which a standard is attained or exceeded shall notify the appropriate regulatory agency that a standard has been attained or exceeded; and

(b) The regulatory agency shall require a response in accordance with the rules promulgated under s. 160.21, Stats. No response shall be required if it is demonstrated to the satisfaction of the appropriate regulatory agency that a scientifically valid determination cannot be made that the preventive action limit or enforcement standard for a substance in Table 1 or 2 has been attained or exceeded based on consideration of sampling procedures or laboratory precision and accuracy, at a significance level of 0.05.

(2) The regulatory agency shall use one or more valid statistical procedures to determine if a change in the concentration of a substance has occurred. A significance level of 0.05 shall be used for all tests.

(3) In addition to sub. (2), the following applies when a preventive action limit or enforcement standard is equal to or less than the limit of quantitation:

(a) If a substance is not detected in a sample, the regulatory agency may not consider the preventive action limit or enforcement standard to have been attained or exceeded.

(b) If the preventive action limit or enforcement standard is less than the limit of detection, and the concentration of a substance is reported between the limit of detection and the limit of quantitation, the regulatory agency shall consider the preventive action limit or enforcement standard to be attained or exceeded only if:

1. The substance has been analytically confirmed to be present in the same sample using an equivalently sensitive analytical method or the same analytical method, and

2. The substance has been statistically confirmed to be present above the preventive action limit or enforcement standard, determined by an appropriate statistical test with sufficient samples at a significance level of 0.05.

(c) If the preventive action limit or enforcement standard is between the limit of detection and the limit of quantitation, the regulatory agency shall consider the preventive action limit or

Petroleum Substance Discharged	Analysis of Samples Collected for UST Tank Closure Assessments	Solid Waste Program Requirements for Soils to be landfilled[5]	Site Investigation, Pretreatment and Posttreatment Sample Analysis[11]

All samples are to be cooled to 4°C until tested.

APPENDIX F/ QUALIFICATIONS OF METCO PERSONNEL

Ronald J. Anderson, P.G.

Professional Titles

- Senior Hydrogeologist
- Project Manager

Credentials

- Licensed Professional Geologist in Wisconsin
- Licensed Professional Geologist in Minnesota
- Recognized by the State of Wisconsin Department of Natural Resources (Chapter NR712) as a qualified Hydrogeologist
- Certified tank closure site assessor (#41861) in Wisconsin
- Member of the Wisconsin Groundwater Association
- Member of the Minnesota Groundwater Association
- Member of the Federation of Environmental Technologist, Inc.

Education

Includes a BA in Earth Science from the University of Minnesota-Duluth. Applicable courses successfully completed include Hydrogeology, Applied Hydrogeology, Environmental Geology, Geological Field Methods, Geology Field Camp, Geomorphology, Structural Geology, Stratigraphy/Tectonics, Mineralogy/Petrology, Glacial/Quaternary Geology, Geology of North America, Oceanography, General Chemistry, Organic Chemistry, and Environmental Conservation.

Post-Graduate Education

Includes Personnel Protection and Safety, Conducting Comprehensive Environmental Property Assessments, Groundwater Flow and Well Hydraulics, Effective Techniques for Contaminated Groundwater Treatment, and numerous other continuing education classes and conferences.

Work Experience

Includes nine months with the Wisconsin Department of Natural Resources Leaking Underground Storage Tank Program regulating LUST sites and since June 1990, with METCO as a Hydrogeologist and Project Manager. Duties have included: managing, conducting, and reporting tank closure assessments; property assessment, LUST investigations; spill investigations; agricultural chemical investigations, dry cleaning chemical investigations, general geotechnical/environmental investigations; Geoprobe projects (soil, groundwater, soil gas sampling); drilling projects (soil boring and monitoring wells); and remedial projects. Since 1989, METCO has sampled/consulted over 1,465 environmental sites.

Eric J. Dahl

Professional Title

- Hydrogeologist

Credentials

- Recognized by the State of Wisconsin Department of Natural Resources (Chapter NR712) as a qualified Hydrogeologist.

Education

Includes B.S. in Geology from the University of Wisconsin-Eau Claire. Applicable courses successfully completed include Environmental Geology, Physical Hydrogeology, Chemical Hydrogeology, Computer Modeling in Hydrogeology, Aqueous Geochemistry, Field Geology I and II, Mineralogy and Petrology I and II, Sedimentology and Stratigraphy, Petroleum and Economic Geology, Earth Resources, Earth History, and Structural Geology.

Post-Graduate Education

40-hour OSHA Hazardous Materials Safety Training course with 8-hour refresher course.

Work Experience

With METCO since November 1999 as a Hydrogeologist. Duties have included: Site Investigations, Phase I and Phase II Environmental Site Assessments, Case Closure Requests/GIS Registry, Geoprobe projects (oversight, direction, and sampling), drilling projects/monitoring well installation (oversight, direction, and sampling), soil excavation projects (oversight, direction, and sampling), Geoprobe operation, and operation and maintenance of remedial systems.

Thomas P. Pignet, P.E.

Professional Titles

- Chemical Engineer
- Industrial Engineer

Credentials

- Licensed Professional Engineer in Wisconsin

Education

Undergraduate: B.S. in Chemical Engineering from the University of Wisconsin. Applicable courses include the standard chemistry curriculum - basic, physical, organic, etc. - plus engineering transport phenomena, chemical unit operations (e.g. separations), fluid mechanics, etc.

Post-Graduate Education

Ph.D. in Chemical Engineering from the University of Minnesota - with applicable special training in absorption & catalysis; M.S. in Industrial Engineering from the University of Wisconsin - Milwaukee - with special emphasis on statistical techniques and data analysis. Applicable further training: continuing education, semester-length courses in [1] Understanding Environmental & Safety Regulation; [2] Hazardous & Toxic Waste Management; and a number of 1-2 day workshops - Fire & Explosion Safety; Small Quantity Generations of Hazardous Waste.

Work Experience

Includes ten years as a research chemical engineer with a large chemical manufacturer; one year as process development engineer and demonstration-scale test analyst on a unique coal gasification project; ten years in association with UW-M, teaching and consulting to industry on energy efficiency, waste minimization and productivity improvement. One year working with a small engineering consulting firm on energy, environmental, and process improvement projects, including LUST Investigations and Remediations. With METCO since February 2000. Duties include Remedial Action Plan preparation, pilot test design and performance, remedial systems design and implementation, and general management of METCO's remedial projects.

Robert Wilmoth

Professional Title

- Hydrogeologist

Credentials

- OSHA 40 Hour HAZWOPER
- OSHA 10 Hour Construction Safety and Health

Education

Includes B.S. in Geology and Environmental Sciences from the university of Wisconsin – Eau Claire. Applicable courses successfully completed include Physical and Applied Chemical Hydrogeology, Geochemistry, Mineralogy and Petrology I and II, Glacial Geology, Sedimentology and Stratigraphy, Earth History, Geologic Field Mapping (Field Camp), Water Recourses, Earth Resources, and Geographic Informational Systems.

Work Experience

With METCO since April 2019 as Hydrogeologist. Duties include: soil and groundwater sampling, operation and maintenance of remedial systems, Geoprobe projects (oversight, direction, and sampling), site mapping, data reduction and analysis, and reporting.

APPENDIX G/ STANDARD OF CARE

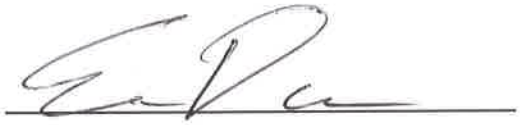
STANDARD OF CARE

The analysis and conclusions expressed in this report are based upon data obtained from the indicated subsurface locations and from other sources discussed in this report. Actual subsurface conditions may vary and may not become evident without further assessment.

All work conducted by METCO is in accordance with currently accepted hydrogeologic and engineering practices and they neither imply nor intend warranty.

We appreciate the opportunity to be of service to you. If you have any questions or require additional information, please do not hesitate to contact us.

I, Eric Dahl, hereby certify that I am a hydrogeologist as that term is defined in s. NR 712.03 (1), Wis. Adm. Code, am registered in accordance with the requirements of ch. GHSS 2, Wis. Adm. Code, or licensed in accordance with the requirements of ch. GHSS 3, Wis. Adm. Code, and that, to the best of my knowledge, all of the information contained in this document is correct and the document was prepared in compliance with all applicable requirements in chs. NR 700 to 726, Wis. Adm. Code.



11/4/21
