Re: STATUS REPORT  
~~NT Dor-O-Matic, Greendale, Wisconsin~~  
BRRTS#: 02-41-118817  
Facility ID#: 241050590

Dear Ms. Chung:

On behalf of NT Dor-O-Matic, Huff & Huff is submitting this status report to the Wisconsin Department of Natural Resources for the above-referenced site. On June 12, 1997, we submitted a Subsurface Investigation Work Plan (Plan) to the WDNR and an amended Plan on September 15, 1997. Huff & Huff conducted the field work under that Plan in June and October, 1997.

Huff & Huff submitted a request for a permit for off-site access to the Milwaukee County Department of Parks, Recreation, and Culture at the end of March 1998. A Construction/Right of Entry Permit for Geotechnical and/or Environmental Investigations was issued on October 9, 1998.

Huff & Huff conducted additional subsurface work in April 1999 with follow-up groundwater sampling in June and August 1999. The data collected during the additional subsurface investigation has helped define the extent of impact, but additional investigation will assist us in delineating the impact. It is anticipated that the next phase of the subsurface investigation will be the final step necessary to complete the delineation. We hope to conduct this next phase before the end of the year.

This subsurface investigation will expand on the information already collected to date. The following areas will be investigated further in this next phase of the investigation:

1. Installation of one soil boring and monitoring well near the northeast corner of the building;
2. Installation of one deep boring/well to investigate if vertical migration has occurred

- and determine if a confining layer is present;
3. Installation of two downgradient wells to define the ground water impact limits;
  4. Additional delineation of impacts in the Root River Parkway to the northwest;
  5. Additional delineation of impacts beneath the building; and
  6. Collection of physical soil and ground water data.

After collection and analysis of data from this next phase, Huff & Huff intends to prepare and issue a site investigation report to the WDNR. The collected soil and ground water samples will be analyzed for the parameters related to the former degreaser. Results from this investigation will be submitted to the WDNR upon completion of the site investigation report.

Please do not hesitate to contact me if you have any questions in this regard.

Sincerely,

A handwritten signature in blue ink that reads "James E. Huff for". The signature is written in a cursive, flowing style.

James E. Huff, P.E.  
Vice President
