Ron,

Thank you for the follow-up reminder. I took the data/submittal for the site to a peer-review committee on Feb 19th. They did not think it would pass closure committee based on the increasing groundwater trend. Even though it is only one well (the source area well), the consensus was to have you submit costs for two more rounds of groundwater sampling and see that trend moving in the right direction. The vapor results were positive and well explained, addressing that pathway. So, a cost request for two more rounds of quarterly groundwater monitoring and trust the trend stabilizes or declines is the recommendation. As always, secondary lines of evidence, like comparison of groundwater –levels to contaminant trends can be helpful persuaders at closure review time.

Thanks again for the follow-up and I look forward to getting the costs in house, reviewed and hopefully ready for closure this fall.

Lee
