Subject: RE: Status Update Speaker Property

Hi Lynn,

I agree that a well is needed to the southwest of MW-1. It might be possible to locate it on the property to the west or on the Town of Mount Ida property across the road. You should also measure free product thickness in the well prior to ground water sampling. These items will need a bid deferral.

The Feb. 2018 Status Update says that there were two 500-gallon tanks, one leaded and one unleaded gasoline. The map shows one UST location. Can you explain where both tanks were located on the Speaker property?

The lithology varies from gravel to silty clay, silty sand to sandy silt. Do you have any cross-sections drawn at this time that you could refer me to?

Is there a remedial action that you would recommend and that would be effective in this environment?

We are committed to service excellence.

Visit our survey at <http://dnr.wi.gov/customersurvey> to evaluate how I did.

Happy Friday, Lynn.

I received the paper copy of the Speaker Property Status Update today. Can you please send an e-copy so we can easily upload to our BRRS system?

We are committed to service excellence.
