RE: Request for Approval for Off-Site Disposal of Contaminated Soil from the Former Allis Chalmers Property in West Allis to the Lime Pit Site – STS Project Nos. 200702617 and 200702618

Dear Mr. Boettcher:

On behalf of the Whitnall Summit Company and 6750 North Acres, LLC, STS Consultants, Ltd. (STS) requests WDNR approval to dispose of soil fill that is currently stockpiled on both the Whitnall Summit Company property and the 6750 North Acres, LLC property, to the Lime Pit Property, located at 1960 S. 67<sup>th</sup> Place, in accordance with NR 718, Wisconsin Administrative Code (WAC). Both the Whitnall Summit Company stockpile and the 6750 North Acres, LLC stockpile were generated from various reconstruction projects that have occurred at the Former Allis Chalmers Plant site in West Allis, Wisconsin. The following provides a summary of the site background, including a summary of historic analytical data, data available from the Lime Pit site and the results of recent analytical testing of the current stockpiles.

### **Site Background**

The stockpiles of soil are currently stored on the Whitnall Summit Company and the 6750 North Acres, LLC properties, both part of the Former Allis Chalmers Plant Site. Stockpile locations are shown on the attached Figure 1. The stockpiled soil was accumulated during redevelopment of portions of the Former Allis Chalmers Plant site by the Whitnall Summit Company, the AC-Reorganization Trust and the City of West Allis. The following subsections describe each of these stockpile further.

Whitnall Summit Company Stockpile – The stockpile is located east of the former AC Power House and currently consists of approximately 4,000 cubic yards of clayey soil, with small fractions of foundry sand, slag and broken concrete and brick. The stockpile originated from several construction projects that occurred on the former Allis Chalmers Plant site. A portion of the current gill soil pile was initially addressed in STS' October 11, 2004 letter to WDNR

Whitnall Summit Company and 6750 North Acres, LLC  
STS Job Nos. 200702617 and 200702618  
August 30, 2007

(Exemption for Use of Stockpiled Soil as On-site Fill Material). Sixteen soil samples were collected from the pile in 2004 and screened with a PID to semi-quantitatively screen for the presence of volatile organic compounds (VOCs) and analyzed for RCRA metals. No elevated PID readings were measured. Arsenic concentrations were between 4.07 and 44.3 mg/kg. Lead concentrations were between 20.4 and 239 mg/kg, with the exception of one sample that had a lead concentration of 1700 mg/kg. That sample was then re-analyzed for TCLP-lead resulting in no detectable leachable lead, given a 0.05 mg/l detection limit. Based on the approval of WDNR, in their letter dated October 18, 2004, approximately 3,000 cubic yards of this stockpiled soil was moved over to the North Acres fill pile in 2004, approved to be used under proposed parking lots. Copies of analytical reports are included in Attachment A.

Additional fill soil was added to this stockpile from the remodel of Building 4 (interior columns/footings). Approximately 2,000 cubic yards of soil with some brick and broken pavement was generated from the construction in July and August, 2005 and was added to the Whitnall Summit stockpile. Testing of this material was conducted at the column locations prior to and during construction. Eleven soil samples were screened in the field and were analyzed in the laboratory for VOCs. Trace concentrations of 1,1,1-trichloroethane (9.9 ug/kg) and trichloroethene (5.7 ug/kg) were detected in two different samples of the total eleven samples. A copy of the tabulated analytical results and laboratory reports are included in Attachment A.

North Acres Stockpile - The stock pile is located north of the We Energies Substation and currently consists of approximately 6,000 cubic yards of soil and foundry sand fill, with a smaller portion of broken concrete, brick and asphalt. This stockpile originated from four sources, including: 1) soil that was generated during the construction of the Whitnall Summit parking structure in the area formerly known as the Utility Corridor; 2) soil that was generated during the construction of the City of West Allis parking lot and associated storm sewer laterals; 3) soil that was moved from the Whitnall Summit stockpile; and 4) sandblasting waste generating during renovation of one of the Whitnall Summit buildings. At one point this stockpile included approximately 12,000 cubic yards of material, however, approximately 6,000 cubic yards of material was placed in the basement of the former Allis Chalmers Balance and Overspeed (BOS) building in 2006 (approved by WDNR letter dated September 11, 2006).

Whitnall Summit Company and 6750 North Acres, LLC  
STS Job Nos. 200702617 and 200702618  
August 30, 2007

As indicated in STS' July 23, 2004 letter to WDNR, construction of the Whitnall Summit parking structure (noted as #1 above) was anticipated to generate approximately 5,300 cubic yards of fill material, due to grading and caisson construction. This parking structure is located over a former settling basin and clarifier in an area referred to as the Utility Corridor of the former Allis Chalmers Plant site. The settling basin and clarifier were historically filled using materials from three different sources: a) approximately 3,000-4,000 cubic yards of soil that were stockpiled on former Allis Chalmers property; b) sediment residue that was left in the clarifier and settling basin after draining them; and c) clean soil/fill that was brought in from off-site. Analytical testing was conducted on both the a) historical soil piles and b) on the clarifier sediments. These data are included in Attachment B. The soil that was stockpiled on former Allis Chalmers property (a), that was used to fill the settling basin and clarifier and was subsequently excavated as part of the parking structure construction and placed at the North Acre Stockpile, was tested by the WDNR in 1999 as part of a Brownfield Investigation Study of the Utility Corridor area. The results indicated low to moderate levels of select semi-volatiles, PCBs, pesticides/herbicides, arsenic and lead. Analytical testing of the clarifier sediments (b) is also available for VOCs, PCBs and Protocol B waste analysis from 2 sediment samples collected in 1990, 3 sediment samples collected in 1991 and 2 sediment samples collected in 1999. Copies of the laboratory reports are provided in Attachment B. The results indicate low level detections of PCBs (0.26 to 0.36 mg/kg) in the 1991 samples, but no detectable PCBs in the 1990 or 1999 samples (although the detection limits were higher than that used in the 1991 analysis). There were also low level detections of metals, pesticides/herbicides, semivolatiles and VOCs. Elevated lead concentrations, above TCLP limits, were detected in 1991, but not in the 1999 analyses. Reactive sulfide was reported in 1999, but not in 1991. Because of the elevated lead and reactive sulfide these sediments were stabilized with clean soils prior to filling of the settling basin and clarifier.

The City of West Allis constructed a bike trail and parking lot, with associated grading and storm water lateral construction, on two adjacent parcels (6545 and 6565 W. Washington Street), also a part of the former Allis Chalmers Plant site. Approximately 1,200 cubic yards of soil/foundry sand fill, generated during this construction project, were added to the North Acres stockpile in fall of 2004 (noted as #2 above) (STS, September 30, 2004 and WDNR, October 18, 2004). Analytical testing for RCRA metals, VOCs and/or PAHs was conducted on 17 soil/fill samples prior to construction. VOCs were not detected in any of the four samples tested and likewise no elevated

Whitnall Summit Company and 6750 North Acres, LLC  
STS Job Nos. 200702617 and 200702618  
August 30, 2007

PID readings (indicative of VOCs) were detected in any of the 17 sampling locations. PAHs were encountered in both of the samples tested in concentrations orders of magnitude lower than those reported at the Lime Pit site (details of the Lime Pit site are presented below). Metals concentrations were below generic RCLs in the 17 samples tested, with the exception of arsenic and lead. Arsenic was detected between 1.5 and 54 mg/kg. Lead was generally detected below 100 mg/kg, except in two samples where it was detected at 450 and 590 mg/kg. An analytical data table and laboratory reports are included in Attachment B.

An estimated 3,000 cubic yards of soil/fill material was moved from the Whitnall Summit Stockpile (a portion of the total that was stockpiled there) to the North Acres stockpile (as requested in STS' letter to WDNR, dated October 11, 2004) (noted as #3 above). The analytical data available for this material is described in the previous subsection.

Approximately 5 to 10 cubic yards of sandblasting spoils (noted as #4 above) were also placed on the eastern end of the North Acres stockpile. A sample of this material was analyzed for lead and was reported to contain 27.7 mg/kg. A copy of the analytical report is also included in Attachment B.

#### **Lime Pit Site Data Summary and Remedial Action Plan**

The Lime Pit site is currently owned by the City of West Allis and is planned for redevelopment as light industrial. The Lime Pit site data is summarized on the tables provided in Attachment C. The primary contaminants at the Lime Pit site consist of PAHs which are widely distributed throughout the site in concentrations in excess of the industrial direct contact RCLs. Metals concentrations were generally below industrial direct contact RCLs, with the exception of arsenic which was detected in five out of seven soil samples at concentrations of 1.1 to 7.1 mg/kg. Lead was also detected in six out of seven samples at concentrations of 19 to 65 mg/kg, below the industrial direct contact RCL. Naphthalene was the only VOC detected above the groundwater pathway RCL and it was found at concentrations above the laboratory detection limit in 6 out of 20 soil samples, at concentrations of 0.633 to 130 mg/kg. PCBs were detected in one out of six soil samples (MW-14) at a concentration of 0.26 mg/kg.

The remedial action plan for the Lime Pit site will specify placement of a direct contact barrier over areas containing PAHs in the direct contact zone above generic industrial direct contact

Whitnall Summit Company and 6750 North Acres, LLC  
STS Job Nos. 200702617 and 200702618  
August 30, 2007

RCLs. These areas include virtually all of the former lime slurry pit areas and small portions of the central, western and northern parts of the site. The direct contact barrier will likely take the form of industrial buildings, pavement for parking lots and walkways and clay soil in landscaped areas. The area of the Lime Pit site where soil fill is needed to bring the site to its proposed final grade and where the two stockpiles discussed herein are proposed to be placed, is shown on TEMCO's Figure 5, provided in Attachment C.

### **Recent Analytical Testing Results**

Based on the data that was available from historic testing of the various sources of fill currently within the two stockpiles, additional testing of the stockpiled fill was conducted to confirm concentrations of arsenic, lead and PCBs. In addition, soil samples were screened in the field using a photo-ionization detector to further evaluate the potential for VOCs. This testing program was discussed with you prior to implementation and we understand that you concurred with the approach. As discussed with you, additional laboratory testing for VOCs, the other RCRA metals and PAHs was not necessary, due to relatively low concentrations discovered in the historic testing for these compounds and on the prevalence of PAHs on the Lime Pit site.

STS collected 10 soil/fill samples from each stockpile for further evaluation on May 31, 2007. Each stockpile was divided roughly into five equal segments with two samples collected from each stockpile segment. Each sample was screened in the field with the PID. Then the two samples from each segment were composited for laboratory analysis of total lead, arsenic and PCBs (a total of 5 composite samples from each stockpile). Based on these results, the sample with the highest lead and arsenic concentrations from each stockpile were further analyzed using the Toxicity Characteristic Leaching Procedure (TCLP) and the Synthetic Precipitation Leaching Procedure (SPLP). In addition, on July 25, 2007, four grab soil samples were collected from segment 2 and the border between segment 2 and 3 of the North Acres stockpile for PCB analysis, because of an elevated PCB concentration of composite soil sample NA-C2. The results of the stockpiled soil analyses are summarized on the attached Tables 1 and 2, and copies of the analytical laboratory reports are provided as Attachment D.

Arsenic was detected in 7 out of the 10 samples analyzed at concentrations ranging from 2.5 mg/kg to 28 mg/kg, generally slightly higher than the concentrations found at the Lime Pit Site and above the generic industrial direct contact RCL of 1.6 mg/kg. As such, the sample with the

Whitnall Summit Company and 6750 North Acres, LLC  
STS Job Nos. 200702617 and 200702618  
August 30, 2007

highest arsenic concentration from each stockpile was reanalyzed using the TCLP and SPLP laboratory procedures. Sample NA-C1, at 17 mg/kg total arsenic, and sample WS-C3, at 28 mg/kg total arsenic, contained no detectable leachable arsenic using the TCLP and SPLP methods. As such, no groundwater impacts are anticipated from the arsenic concentrations in the stockpiled soil and the general redevelopment plan described above for the Lime Pit site will be sufficient to protect against direct contact with these soils.

Lead was detected in each of the samples collected from the stockpiles at concentrations ranging from 28 to 920 mg/kg. One of these samples (WS-C3) is above the generic industrial direct contact RCL of 500 mg/kg. Samples WS-C3 and sample NA-C1 were reanalyzed for lead using the TCLP and SPLP methods. Both samples were below the detection limit for the TCLP analysis. The SPLP analysis yielded leachable lead concentrations of 0.0059 and 0.0058 mg/l which are below the NR 140 groundwater quality Enforcement Standard of 0.015 mg/l. Lead concentrations in the groundwater samples collected from the Lime Pit site were 0.0044 and 0.0051 mg/l at the two out of 16 monitoring wells where it was detected. As such, groundwater quality impacts due to leachable lead in the stockpiled soil are not anticipated at the Lime Pit site and the general redevelopment plan described above will be sufficient to protect against direct contact with these soils.

PCBs were detected in 9 out of 10 of the original composite samples collected during this evaluation and were detected in each of the four additional samples collected from the North Acres stockpile. Concentrations of PCBs in the Whitnall Summit stockpile ranged from <0.096 to 0.16 mg/kg, below the EPA clean-up limit of 1.0 mg/kg and below the concentration detected on the Lime Pit site (0.26 mg/kg). Concentrations of total PCBs in the North Acres stockpile ranged from 0.041 to 1.6 mg/kg. Only one sample from the original sampling event in May, 2007(NA-C2, collected from the second segment of the stockpile from the west) exceeded the EPA clean-up limit of 1.0 mg/kg. Another sample, NA-C1 also had a PCB concentration of 0.48 mg/kg. Since this was a composite sample, the possibility existed that worst case all of the PCBs may have come from one portion of the composite sample which would mean that a hotspot were present in the stockpile. If that was the case, both segments NA-1 and NA-2 of the stockpile could be inappropriate for off-site disposal at the Lime Pit site. Four additional stockpile samples were then collected; two from segment NA-2 and two from the boundary between NA-2 and NA-3, to better define the area with the elevated PCBs. The results of these four samples were 0.5, 1.1,

Whitnall Summit Company and 6750 North Acres, LLC  
STS Job Nos. 200702617 and 200702618  
August 30, 2007

0.56 and 0.55 at NA-C2-C, NA-C2-D, NA-C2/3-C and NA-C2/3-D, respectively. Based on these findings, we propose leaving the soil from the two western most segments of the North Acres stockpile on the North Acres property and completing the site redevelopment/direct contact barrier construction there as originally planned and approved (WDNR, October 18, 2004). The average PCB concentration from the soil samples collected from the eastern three segments of the North Acres stockpile, and including the samples collected from the boundary between segments NA-2 and NA-3, is 0.256 mg/kg. This average is well below the EPA clean-up limit and essentially the same as the concentration that was detected on the Lime Pit site. As such, disposal of the stockpiled soil from the Whitnall Summit stockpile and the eastern three-fifths of the North Acres stockpile to the Lime Pit site, given the planned remedial action of a direct contact barrier at the Lime Pit site, will be sufficient to protect against direct contact with these soils.

### **Conclusions**

Based on the analytical results of both historic and recent soil/fill testing of the Whitnall Summit stockpile, these soils are similar with respect to VOC, PAH, PCB and metals concentrations, except for the lead concentrations to that reported at the Lime Pit site. Lead concentrations are somewhat higher in the Whitnall Summit stockpile, in comparison to the Lime Pit site; however, TCLP analysis indicates that the stockpiled soils are not hazardous and SPLP analysis indicates that the lead is not leachable to the extent that it would create a NR 140 ES exceedance. As such, we believe that the Whitnall Summit stockpiled soil should be acceptable for disposal at the Lime Pit site.

Based on the analytical results of both historic and recent soil/fill testing of the North Acres stockpile, these soils are similar with respect to VOC, PAH, and metals concentrations, except for the some of the PCB and lead concentrations, to that reported at the Lime Pit site. Lead concentrations are somewhat higher in the North Acres stockpile, in comparison to the Lime Pit site; however, TCLP analysis indicates that the stockpiled soils are not hazardous and SPLP analysis indicates that the lead is not leachable to the extent that it would create a NR 140 ES exceedance. Due to PCB concentrations in two samples above 1 mg/kg and based on our conversations with you, we propose that the western two segments of the North Acres stockpile remain on the North Acres property. The eastern three segments of the North Acres stockpile should be acceptable for disposal at the Lime Pit site.

**Closing**

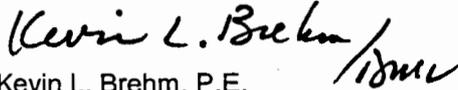

Thank you for your time and consideration in this matter. Based on time constraints of both Whitnall Summit and North Acres, LLC for completing parking lot construction prior to the end of the year and on the City of West Allis' proposed closure schedule for the Lime Pit site, we respectfully request your timely review of this request. STS has also forwarded a copy of this request directly to Ms. Victoria Stovall along with the appropriate review fee of \$500. If you have any questions regarding the above, please contact Donna Volk at 414-577-1310.

Respectfully,

STS CONSULTANTS, LTD.

Qualifiers:

- E GTL (EPA) - Greater than upper calibration limit: Actual value is known to be greater than the upper calibration range.
- O (ESC) Sample diluted due to matrix interferences that impaired the ability to make an accurate analytical determination. The detection limit is elevated in order to reflect the necessary dilution.

RE: Carlson Mountain

Enclosed are the results of analyses for samples received by the laboratory on 10/07/04. If you have any questions concerning this report, please feel free to contact me.

Sincerely,

**Great Lakes Analytical**

Attachment A  
List of Analytes with QC Qualifiers

Sample #	Analyte	Qualifier
L207271-01	Hexachlorobutadiene	J4J3
L207271-02	Hexachlorobutadiene	J4J3
L207271-03	Hexachlorobutadiene	J4J3
L207271-04	Hexachlorobutadiene	J4J3
L207271-05	Hexachlorobutadiene	J4J3
L207271-06	Hexachlorobutadiene	J4J3
L207271-07	Hexachlorobutadiene	J4J3
L207271-08	Hexachlorobutadiene	J4J3

Attachment B  
Explanation of QC Qualifier Codes

Qualifier	Meaning
J3	The associated batch QC was outside the established quality control range for precision.
J4	The associated batch QC was outside the established quality control range for accuracy.

Qualifier Report Information

ESC utilizes sample and result qualifiers as set forth by the EPA Contract Laboratory Program and as required by most certifying bodies including NELAC. In addition to the EPA qualifiers adopted by ESC, we have implemented ESC qualifiers to provide more information pertaining to our analytical results. Each qualifier is designated in the qualifier explanation as either EPA or ESC. Data qualifiers are intended to provide the ESC client with more detailed information concerning the potential bias of reported data. Because of the wide range of constituents and variety of matrices incorporated by most EPA methods, it is common for some compounds to fall outside of established ranges. These exceptions are evaluated and all reported data is valid and useable unless qualified as 'R' (Rejected).

Definitions

**Accuracy** - The relationship of the observed value of a known sample to the true value of a known sample. Represented by percent recovery and relevant to samples such as: control samples, matrix spike recoveries, surrogate recoveries, etc.

**Precision** - The agreement between a set of samples or between duplicate samples. Relates to how close together the results are and is represented by Relative Percent Difference.

**Surrogate** - Organic compounds that are similar in chemical composition, extraction, and chromatography to analytes of interest. The surrogates are used to determine the probable response of the group of analytes that are chemically related to the surrogate compound. Surrogates are added to the sample and carried through all stages of preparation and analyses.

		Control Limits		(AQ)	(SS)
2-Fluorophenol	31-119	Nitrobenzene-d5	43-118	Dibromfluoromethane	70-130 70-130
Phenol-d5	12-134	2-Fluorobiphenyl	45-128	Toluene-d8	70-130 70-130
2,4,6-Tribromophenol	51-141	Terphenyl-d14	43-137	4-Bromofluorobenzene	70-130 70-130

**TIC** - Tentatively Identified Compound: Compounds detected in samples that are not target compounds, internal standards, system monitoring compounds, or surrogates.

Attachment A  
List of Analytes with QC Qualifiers

Sample #	Analyte	Qualifier	
L207758-01	Acrylonitrile	J3	
	Bromodichloromethane	J3	
	1,2-Dibromo-3-Chloropropane	J3	
	Dibromomethane	J3	
	1,1-Dichloropropene	J3	
	2,2-Dichloropropane	J3	
	Hexachlorobutadiene	J3	
	Methyl tert-butyl ether	J3	
	Trichloroethene	J3	
	Trichlorofluoromethane	J3	
	L207758-02	Acrylonitrile	J3
		Bromodichloromethane	J3
		1,2-Dibromo-3-Chloropropane	J3
Dibromomethane		J3	
1,1-Dichloropropene		J3	
2,2-Dichloropropane		J3	
Hexachlorobutadiene		J3	
Methyl tert-butyl ether		J3	
Trichloroethene		J3	
Trichlorofluoromethane		J3	
L207758-03	2-Chloroethyl vinyl ether	J4	

Attachment B  
Explanation of QC Qualifier Codes

Qualifier	Meaning
J3	The associated batch QC was outside the established quality control range for precision.
J4	The associated batch QC was outside the established quality control range for accuracy.

Qualifier Report Information

ESC utilizes sample and result qualifiers as set forth by the EPA Contract Laboratory Program and as required by most certifying bodies including NELAC. In addition to the EPA qualifiers adopted by ESC, we have implemented ESC qualifiers to provide more information pertaining to our analytical results. Each qualifier is designated in the qualifier explanation as either EPA or ESC. Data qualifiers are intended to provide the ESC client with more detailed information concerning the potential bias of reported data. Because of the wide range of constituents and variety of matrices incorporated by most EPA methods, it is common for some compounds to fall outside of established ranges. These exceptions are evaluated and all reported data is valid and useable unless qualified as 'R' (Rejected).

Definitions

**Accuracy** - The relationship of the observed value of a known sample to the true value of a known sample. Represented by percent recovery and relevant to samples such as: control samples, matrix spike recoveries, surrogate recoveries, etc.

**Precision** - The agreement between a set of samples or between duplicate samples. Relates to how close together the results are and is represented by Relative Percent Difference.

**Surrogate** - Organic compounds that are similar in chemical composition, extraction, and chromatography to analytes of interest. The surrogates are used to determine the probable response of the group of analytes that are chemically related to the surrogate compound. Surrogates are added to the sample and carried through all stages of preparation and analyses.

Control Limits				(AQ)	(SS)
2-Fluorophenol	31-119	Nitrobenzene-d5	43-118	Dibromfluoromethane	70-130 70-130
Phenol-d5	12-134	2-Fluorobiphenyl	45-128	Toluene-d8	70-130 70-130
2,4,6-Tribromophenol	51-141	Terphenyl-d14	43-137	4-Bromofluorobenzene	70-130 70-130

**TIC** - Tentatively Identified Compound: Compounds detected in samples that are not target compounds, internal standards, system monitoring compounds, or surrogates.

This report shall not be reproduced, except in full, without the written approval from ESC.  
The reported analytical results relate only to the sample submitted

Attachment A  
List of Analytes with QC Qualifiers

Sample #	Analyte	Qualifier
L208647-01	1,1-Dichloroethene cis-1,3-Dichloropropene	J3 J3

Attachment B  
Explanation of QC Qualifier Codes

Qualifier	Meaning
J3	The associated batch QC was outside the established quality control range for precision.

Qualifier Report Information

ESC utilizes sample and result qualifiers as set forth by the EPA Contract Laboratory Program and as required by most certifying bodies including NELAC. In addition to the EPA qualifiers adopted by ESC, we have implemented ESC qualifiers to provide more information pertaining to our analytical results. Each qualifier is designated in the qualifier explanation as either EPA or ESC. Data qualifiers are intended to provide the ESC client with more detailed information concerning the potential bias of reported data. Because of the wide range of constituents and variety of matrices incorporated by most EPA methods, it is common for some compounds to fall outside of established ranges. These exceptions are evaluated and all reported data is valid and useable unless qualified as 'R' (Rejected).

Definitions

**Accuracy** - The relationship of the observed value of a known sample to the true value of a known sample. Represented by percent recovery and relevant to samples such as: control samples, matrix spike recoveries, surrogate recoveries, etc.

**Precision** - The agreement between a set of samples or between duplicate samples. Relates to how close together the results are and is represented by Relative Percent Difference.

**Surrogate** - Organic compounds that are similar in chemical composition, extraction, and chromatography to analytes of interest. The surrogates are used to determine the probable response of the group of analytes that are chemically related to the surrogate compound. Surrogates are added to the sample and carried through all stages of preparation and analyses.

Control Limits				(AQ)	(SS)
2-Fluorophenol	31-119	Nitrobenzene-d5	43-118	Dibromfluoromethane	70-130 70-130
Phenol-d5	12-134	2-Fluorobiphenyl	45-128	Toluene-d8	70-130 70-130
2,4,6-Tribromophenol	51-141	Terphenyl-d14	43-137	4-Bromofluorobenzene	70-130 70-130

**TIC** - Tentatively Identified Compound: Compounds detected in samples that are not target compounds, internal standards, system monitoring compounds, or surrogates.

## LABORATORY REPORT

Applied Environmental Sciences  
850 Elm Grove Road, Suite 11  
Elm Grove, WI 53122

196695  
Page 1 of 1

Project Name: West Allis  
Sample Description: SETL Pd #1-#6  
Sample No.: 068598

Report Date: 4/29/99  
Sample Received On Ice: 4/21/99  
Date Sampled: 4/21/99  
Date Analyzed: 4/24/99

Compounds	Concentration		Method Detection Limit (MDL)	Regulatory Limit
	Found In Sample	Blank		
1. Benzene	<0.0019	<0.0019	0.0019	0.50
2. Carbon Tetrachloride	<0.0018	<0.0018	0.0018	0.50
3. Chlorobenzene	<0.0017	<0.0017	0.0017	100.00
4. Chloroform	<0.0021	<0.0021	0.0021	6.00
5. o-Cresol	<0.0016	<0.0016	0.0016	200.00
6. m-Cresol	<0.0030	<0.0030	0.0030	200.00
7. p-Cresol	<0.0030	<0.0030	0.0030	200.00
8. 1,4-Dichlorobenzene	<0.0030	<0.0030	0.0030	7.50
9. 1,2-Dichloroethane	<0.0013	<0.0013	0.0013	0.50
10. 1,1-Dichloroethene	<0.0016	<0.0016	0.0016	0.700
11. 2,4-Dinitrotoluene	<0.0056	<0.0056	0.0056	0.13
12. Hexachlorobenzene	<0.0012	<0.0012	0.0012	0.13
13. Hexachloro-1,3 -butadiene	<0.0008	<0.0008	0.0008	0.50
14. Hexachloroethane	<0.0006	<0.0006	0.0006	3.00
15. Methyl Ethyl Ketone	<0.0110	<0.0110	0.0110	200.00
16. Nitrobenzene	<0.0010	<0.0010	0.0010	2.00
17. Pentachlorophenol	<0.0034	<0.0034	0.0034	100.00
18. Pyridine	<0.0042	<0.0042	0.0042	5.00
19. Tetrachloroethylene	<0.0022	<0.0022	0.0022	0.70
20. Trichloroethylene	<0.0015	<0.0015	0.0015	0.50
21. 2,4,5-Trichlorophenol	<0.0012	<0.0012	0.0012	400.00
22. 2,4,6-Trichlorophenol	<0.0012	<0.0012	0.0012	2.00
23. Vinyl Chloride	<0.0019	<0.0019	0.0019	0.20

Wisconsin Certified Laboratory #99388890.

All results expressed as ppm unless otherwise indicated.

Methods performed according to SW-846, "Test methods for Evaluating Solid Waste".

Analysis performed on Extract from TCLP.

The contents of this report apply only to the sample analyzed. No duplication of this report is allowed except in its entirety.

I certify that the data contained in this Final Report has been generated and reviewed in accordance with approved methods and Laboratory Standard Operating Procedure. Exceptions, if any, are discussed in the accompanying sample comments. Release of this final report is authorized by Laboratory management, as is verified by the following signature. Reported results shall not be reproduced, except in full, without the written approval of the lab. The sample results relate only to the analytes of interest tested.

## Qualifier Codes

Flag	Applies To	Explanation
+	Inorganic	Analyte is detected in the method blank. Method blank criteria is evaluated to the laboratory method detection limit. Additionally, method blank acceptance may be based on project specific criteria or determined from analyte concentrations in the sample and are evaluated on a sample by sample basis.
	Inorganic	The analyte has been detected between the method detection limit and the reporting limit.
	Organic	Analyte is present in the method blank. Method blank criteria is evaluated to the laboratory method detection limit. Additionally, method blank acceptance may be based on project specific criteria or determined from analyte concentrations in the sample and are evaluated on a sample by sample basis.
—	All	Elevated detection limit.
D	All	Analyte value from diluted analysis or surrogate result not applicable due to sample dilution.
	Inorganic	Estimated concentration due to matrix interferences. During the metals analysis the serial dilution failed to meet the established control limits of 0-10%. The sample concentration is greater than 50 times the IDL for analysis done on the ICP or 100 times the IDL for analysis done on the ICP-MS. The result was flagged with the E qualifier to indicate that a physical interference was observed.
	Organic	Analyte concentration exceeds calibration range.
F	Inorganic	Due to potential interferences for this analysis by Inductively Coupled Plasma techniques (SW-846 Method 6010), this analyte has been confirmed by and reported from an alternate method.
	Organic	Surrogate results outside control criteria.
H	All	Preservation, extraction or analysis performed past holding time.
■F	Inorganic	This test is considered a field parameter, and the recommended holding time is 15 minutes from collection. The analysis was performed in the laboratory beyond the recommended holding time.
J	Inorganic	The analyte has been detected between the method detection limit and the reporting limit.
	Organic	Concentration detected is greater than the method detection limit but less than the reporting limit.
K	Inorganic	Sample received unpreserved. Sample was either preserved at the time of receipt or at the time of sample preparation.
—	Organic	Detection limit may be elevated due to the presence of an unrequested analyte.
L	All	Elevated detection limit due to low sample volume.
M	Organic	Sample pH was greater than 2
■	All	Spiked sample recovery not within control limits.
O	Organic	Sample received overweight.
—	Organic	The relative percent difference between the two columns for detected concentrations was greater than 40%.
Q	All	The analyte has been detected between the limit of detection (LOD) and limit of quantitation (LOQ). The results are qualified due to the uncertainty of analyte concentrations within this range.
==	Organic	The relative percent difference between quantitation and confirmation columns exceeds internal quality control criteria. Because the result is unconfirmed, it has been reported as a non-detect with an elevated detection limit.
+	All	The analyte was not detected at or above the reporting limit.
+	All	Sample received with headspace.
W	All	A second aliquot of sample was analyzed from a container with headspace.
+	All	See Sample Narrative.
&	All	Laboratory Control Spike recovery not within control limits.
	All	Precision not within control limits.
	All	The analyte was not detected at or above the reporting limit.
1	Inorganic	Dissolved analyte or filtered analyte greater than total analyte; analyses passed QC based on precision criteria.
	Inorganic	Dissolved analyte or filtered analyte greater than total analyte; analyses failed QC based on precision criteria.
3	Inorganic	BOD result is estimated due to the BOD blank exceeding the allowable oxygen depletion.
	Inorganic	BOD duplicate precision not within control limits. Due to the 48 hour holding time for this test, it is not practical to reanalyze and try to correct the deficiency.
5	Inorganic	BOD result is estimated due to insufficient oxygen depletion. Due to the 48 hour holding time for this test, it is not practical to reanalyze and try to correct the deficiency.
	Inorganic	BOD laboratory control sample not within control limits. Due to the 48 hour holding time for this test, it is not practical to reanalyze and try to correct the deficiency.
	Inorganic	BOD result is estimated due to complete oxygen depletion. Due to the 48 hour holding time for this test, it is not practical to reanalyze and try to correct the deficiency.

# En Chem, Inc. Cooler Receipt Log

Batch No. 848990

Project Name or ID 87621 x A No. of Coolers: 1 Temps: NOI

A. Receipt Phase: Date cooler was opened: 7/21/04 By: J. Murray

- 1. Were samples received on ice? (Must be  $\leq 6$  C).....  YES  NO<sup>2</sup>  NA
- 2. Was there a Temperature Blank?.....  YES  NO
- Were custody seals present and intact on cooler? (Record on COC).....  YES  NO
- 4: Are COC documents present?.....  YES  NO<sup>2</sup>
- Does this Project require quick turn around analysis?.....  YES  NO
- 6: Is there any sub-work?.....  YES  NO
- Are there any short hold time tests?.....  YES  NO
- 8: Are any samples nearing expiration of hold-time? (Within 2 days).....  YES<sup>1</sup>  NO Contacted by/Who \_\_\_\_\_
- Do any samples need to be Filtered or Preserved in the lab?.....  YES<sup>1</sup>  NO Contacted by/Who \_\_\_\_\_

B. Check-in Phase: Date samples were Checked-in: 7/21/04 By: J. Murray

- 1. Were all sample containers listed on the COC received and intact?.....  YES  NO<sup>2</sup>  NA
- 2. Sign the COC as received by En Chem. Completed.....  YES  NO
- 3. Do sample labels match the COC? .....  YES  NO<sup>2</sup>
- Completed pH check on preserved samples.....  YES  NO  NA
- (This statement does not apply to water: VOC, O&G, TOC, DRO, Total Rec. Phenolics)
- 4. Do samples have correct chemical preservation?.....  YES  NO<sup>2</sup>  NA
- (This statement does not apply to water: VOC, O&G, TOC, DRO, Total Rec. Phenolics)
- Are dissolved parameters field filtered?.....  YES  NO<sup>2</sup>  NA
- 7: Are sample volumes adequate for tests requested? .....  YES  NO<sup>2</sup>
- Are VOC samples free of bubbles >6mm .....  YES  NO<sup>2</sup>  NA
- 9: Enter samples into logbook. Completed.....  YES  NO
- 10: Place laboratory sample number on all containers and COC. Completed.....  YES  NO
- 11: Complete Laboratory Tracking Sheet (LTS). Completed.....  YES  NO  NA
- 12: Start Nonconformance form. ....  YES  NO  NA
- 13: Initiate Subcontracting procedure. Completed.....  YES  NO  NA
- 14: Check laboratory sample number on all containers and COC. .... Kim  YES  NO  NA

**Short Hold-time tests:**

Report Date: 1/5/07

**- Analytical Results -**

Test	Result	Units	MDL	Analysis Date	By	Method
Lab #: 07A0101-001	Sample ID:	5TH FLOOR N WALL W SUNNERT				
Lead	27.7	mg/Kg	1.5	1/4/07	GGG	6010C

The Lead concentration found in this sample indicates that the highest theoretical concentration possible in a TCLP analysis could not exceed 1.4 mg/L. This would be far below the 5.0 mg/L concentration which would designate the material as hazardous waste.

Attachment A  
List of Analytes with QC Qualifiers

Sample #	Analyte	Qualifier
L297283-02	PCB 1016	O
	PCB 1221	O
	PCB 1232	O
	PCB 1242	O
	PCB 1248	O
	PCB 1254	O
	PCB 1260	O
L297283-06	Decachlorobiphenyl	J1
L297283-07	Decachlorobiphenyl	J1
L297283-08	Decachlorobiphenyl	J7
	Tetrachloro-m-xylene	J7
L297283-09	Arsenic	O
	Lead	OJ5
L297283-11	Decachlorobiphenyl	J7
	Tetrachloro-m-xylene	J7
L297283-12	Decachlorobiphenyl	J2

Attachment B  
Explanation of QC Qualifier Codes

Qualifier	Meaning
J1	Surrogate recovery limits have been exceeded; values are outside upper control limits
J2	Surrogate recovery limits have been exceeded; values are outside lower control limits
J7	Surrogate recovery limits cannot be evaluated; surrogates were diluted out
O	(ESC) Sample diluted due to matrix interferences that impaired the ability to make an accurate analytical determination. The detection limit is elevated in order to reflect the necessary dilution.
J5	The sample matrix interfered with the ability to make any accurate determination; spike value is high

Qualifier Report Information

ESC utilizes sample and result qualifiers as set forth by the EPA Contract Laboratory Program and as required by most certifying bodies including NELAC. In addition to the EPA qualifiers adopted by ESC, we have implemented ESC qualifiers to provide more information pertaining to our analytical results. Each qualifier is designated in the qualifier explanation as either EPA or ESC. Data qualifiers are intended to provide the ESC client with more detailed information concerning the potential bias of reported data. Because of the wide range of constituents and variety of matrices incorporated by most EPA methods, it is common for some compounds to fall outside of established ranges. These exceptions are evaluated and all reported data is valid and useable unless qualified as 'R' (Rejected).

Definitions

**Accuracy** - The relationship of the observed value of a known sample to the true value of a known sample. Represented by percent recovery and relevant to samples such as: control samples, matrix spike recoveries, surrogate recoveries, etc.

**Precision** - The agreement between a set of samples or between duplicate samples. Relates to how close together the results are and is represented by Relative Percent Difference.

**Surrogate** - Organic compounds that are similar in chemical composition, extraction, and chromatography to analytes of interest. The surrogates are used to determine the probable response of the group of analytes that are chemically related to the surrogate compound. Surrogates are added to the sample and carried through all stages of preparation and analyses.

Control Limits				(AQ)	(SS)
2-Fluorophenol	31-119	Nitrobenzene-d5	43-118	Dibromfluoromethane	68-128 64-125
Phenol-d5	12-134	2-Fluorobiphenyl	45-128	Toluene-d8	76-115 69-118
2,4,6-Tribromophenol	51-141	Terphenyl-d14	43-137	4-Bromofluorobenzene	79-127 61-134

**TIC** - Tentatively Identified Compound: Compounds detected in samples that are not target compounds, internal standards, system monitoring compounds, or surrogates.

**From:** Jeff Carr  
**Sent:** Tuesday, June 12, 2007 9:14 AM  
**To:** Login; Sample Storage  
**Subject:** Relog L296084-01 thru -05 and L296085-01 thru -05 for PCB's.

Please Relog STSMWI samples L296084-01 thru -05 and L296085-01 thru -05 for PCB's. TS results can be transferred. In addition log L296084-03 and L296085-01 for TCLP As and Pb and SPLP As and Pb. All can on one new List.

Attachment A  
List of Analytes with QC Qualifiers

Sample #	Analyte	Qualifier
L296085-02	Arsenic	0
L296085-03	Arsenic	0
L296085-05	Arsenic	0

Attachment B  
Explanation of QC Qualifier Codes

Qualifier	Meaning
O	(ESC) Sample diluted due to matrix interferences that impaired the ability to make an accurate analytical determination. The detection limit is elevated in order to reflect the necessary dilution.

Qualifier Report Information

ESC utilizes sample and result qualifiers as set forth by the EPA Contract Laboratory Program and as required by most certifying bodies including NELAC. In addition to the EPA qualifiers adopted by ESC, we have implemented ESC qualifiers to provide more information pertaining to our analytical results. Each qualifier is designated in the qualifier explanation as either EPA or ESC. Data qualifiers are intended to provide the ESC client with more detailed information concerning the potential bias of reported data. Because of the wide range of constituents and variety of matrices incorporated by most EPA methods, it is common for some compounds to fall outside of established ranges. These exceptions are evaluated and all reported data is valid and useable unless qualified as 'R' (Rejected).

Definitions

**Accuracy** - The relationship of the observed value of a known sample to the true value of a known sample. Represented by percent recovery and relevant to samples such as: control samples, matrix spike recoveries, surrogate recoveries, etc.

**Precision** - The agreement between a set of samples or between duplicate samples. Relates to how close together the results are and is represented by Relative Percent Difference.

**Surrogate** - Organic compounds that are similar in chemical composition, extraction, and chromatography to analytes of interest. The surrogates are used to determine the probable response of the group of analytes that are chemically related to the surrogate compound. Surrogates are added to the sample and carried through all stages of preparation and analyses.

		Control Limits			(AQ)	(SS)
2-Fluorophenol	31-119	Nitrobenzene-d5	43-118	Dibromfluoromethane	68-128	64-125
Phenol-d5	12-134	2-Fluorobiphenyl	45-128	Toluene-d8	76-115	69-118
2,4,6-Tribromophenol	51-141	Terphenyl-d14	43-137	4-Bromofluorobenzene	79-127	61-134

**TIC** - Tentatively Identified Compound: Compounds detected in samples that are not target compounds, internal standards, system monitoring compounds, or surrogates.

Project Description: **Whitnall Summit**

City/State Collected: **WEST ALLIS, WI**

Phone: **(414) 359-3030**  
FAX: **(414) 359-0822**

Client Project #: **200702617**

Lab Project #: **STSMWI-200702617**

Collected by (print): **MATTHEW BAAKE**

Site/Facility ID#: **WHITNALL SUMMIT**

P.O.#:

Collected by (signature): *Matthew Baake*

**Rush?** (Lab MUST Be Notified)

Date Results Needed  
**STANDARD**

Immediately Packed on Ice N    Y   X  

   Same Day ..... 200%  
   Next Day ..... 100%  
   Two Day ..... 50%  
   Three Day ..... 25%

Email?   No   X  Yes  
FAX?   No   Yes

No. of Cntrs

Metals 2oz Clr-NoPros (ARSENIC + LEAD ONLY)

TS 8oz Clr-NoPros

Prepared by:
