**Subject:** RE: Emerging Contaminant scoping - Sheleski Property BRRTS # 03-71-186591

The subject property was originally part of a lumber yard for Menasha Wooden Ware. The property operated as a gas station from 1934 until 1975. Since 1975, the property has been occupied by a car sales & service facility, an engine rebuilding facility, and an auto body shop. The property has been vacant since the early 2000s. According to Richard Sheleski the property owner, there is no known on-site use of materials containing any compounds on the DNRs emerging contaminants list including perfluoroalkyl and polyfluoroalkyl substances or 1,4-dioxane.

Any questions please call or email.  
Thanks,

**Subject:** Emerging Contaminant scoping - Sheleski Property BRRTS # 03-71-186591

Hi Jason,

The Site Investigation Report submitted on June 9, 2020, did not include scoping for emerging contaminants. On August 17, 2020, your client was sent a letter indicating all sites would need to scope for emerging contaminants. In order to comply with the August 17, 2020, emerging contaminants letter, your client should provide a § NR 716 scoping statement regarding emerging contaminants at this LUST site.

In accordance with Wis. Admin. Code § NR 716.07, site investigation work plans shall include an evaluation of all potential contaminants associated with a hazardous substance discharge and/or environmental pollution, including emerging contaminants. The evaluation should include information on whether any products containing emerging contaminants, including PFAS, are presently or at any time, were produced, used, handled, or stored at the site, or used in any process services. The statement should include the duration of use of all products that contained emerging contaminants, the type of emerging contaminant contained in the product, and any areas of the site where any emerging contaminants including PFAS-containing products may have been used, stored, managed, or discarded. The evaluation must include an assessment of all environmental media affected or potentially affected by the contamination per Wis. Admin. Code § NR 716.07(4), and potential or known impacts to receptors per Wis. Admin. Code § NR 716.07(8).

Once the WDNR receives the § NR 716 scoping statement regarding emerging contaminants, the WDNR will evaluate and if acceptable, move forward with processing the closure request.

Sincerely,

Andy James

**\*\*Please note my WDNR contact number has changed to 715-527-0114. To ensure you are able to contact me by telephone, please use this number exclusively\*\***

**We are committed to service excellence.**
