# **1. Introduction**

This report presents the results of the groundwater and surface water sampling program, along with the operation and maintenance activities, associated with former City of Rhinelander Landfill (Site). GHD Services Inc. (GHD) completed this report on behalf of the Rhinelander Landfill Group (RLG). The RLG retained GHD in June 2016 to perform the Site maintenance and monitoring activities.

## **1.1 Location**

The former Site is located in the NE ¼ of Section 8 in Township 36 North, Range 9 East, Oneida County, Wisconsin. It is located at the confluence of Slaughterhouse Creek and the Pelican River along Old Highway 8. The Site is shown on Figure 1.

## **1.2 Background**

The Site was opened in 1939 and ceased accepting waste in 1979. The landfill was closed and capped in 1980. The landfill was owned and operated by the City of Rhinelander throughout the entire 40-year operational period. The landfill is still currently owned by the City of Rhinelander.

## **1.3 2022 Activities**

The following activities associated with the Site were conducted in 2022:

- April 19: Semi-Annual groundwater monitoring of 8 monitoring wells.
- April 19: Semi-Annual surface water sampling at three locations in Slaughterhouse Creek.
- June 9: GHD submits semi-annual groundwater monitoring report to the Wisconsin Department of Natural Resources (WDNR)
- July: City of Rhinelander mows the landfill cover.
- October 4-5: Annual groundwater sampling/monitoring of 20 monitoring wells.
- October 4: Semi-Annual surface water sampling at three locations in Slaughterhouse Creek.
- November 22: GHD submits semi-annual GEMS data to the WDNR.
- December 1: City conducts brush clearing around monitoring wells.

# **2. Landfill Inspections**

A landfill inspection was completed during each of the two sampling events.

## **2.1 Grass Cover**

The grass cover on the landfill is in good condition. Mowing was completed by the City of Rhinelander in July 2022.

## **2.2 Trespassing and Site Security**

The fence surrounding the landfill is currently in good condition. There are no known trespassing issues for this reporting period.

## **2.3 Beavers – Area 2 Restoration**

A small percentage of the Area 2 restoration willow trees have been harvested by beavers. This is especially noted along the water's edge on the north side of the restoration area. Harvested trees are noted to be re-sprouting and no additional effort is planned at this time.

## **3. Phytoremediation/Poplar Tree Cover**

The RLG voluntarily planted hybrid poplar trees and willow trees on the north end of the landfill in 1999 and 2000. The trees cover an area of approximately 7-acres. These trees were planted to provide the benefits of phytoremediation to the groundwater and leachate on the north end of the landfill. The hybrid poplar trees are periodically evaluated for overall health and survival. Several fallen trees were observed and end-of-life mortality was noted in a small percentage of the trees.

The RLG sub-contracted a WDNR-Certified Forestry Plan Writer in 2018 to coordinate and oversee a logging contractor who harvested the trees by standard coppice methods. The coppice work included harvesting nearly all above-ground biomass, leaving only the stump and roots behind. During subsequent landfill inspections, it was noted that new growth was reemerging from the existing stumps and roots. Currently, the new trees are approximately ten to fifteen feet tall. The new growth is expected to continue the phytoremediation process.

## **4. Surface Water Sampling**

### **4.1 Sampling Dates and Methods**

Two rounds of surface water sampling were conducted in Slaughterhouse Creek in 2022: one in April and one in October. Samples were collected from the following locations and are presented on Figure 2:

- Upstream of the Site near the old Slaughterhouse (SW-10)
- Downstream of the landfill at the Newell Street Bridge (SW-20).
- At the toe of the Area 2 Restoration project (SW-28).

### **4.2 Sample Results**

A surface water sample collection and analysis summary is included in Table 1. Surface water results from this period are shown in Table 2. All the results from this period are similar or within the normal range of variability when compared to prior sampling dates. Surface water laboratory reports, along with the Data Validation Memos, for this period are in Appendix A.

Chloride, ammonia, copper, lead, and zinc have established surface water quality standards as enumerated in Chapter NR 105, Wisc. Admin. Code (NR 105). None of the 2022 results showed an exceedance of any applicable standard as expressed in NR 105. The discussion in this section compares the results to their codified NR 105 standards. To do this, certain field parameters (pH and temperature for ammonia/ammonium and hardness for metals) need to be considered in making the comparison to the standards. Comparisons of values using straight concentration comparisons are not valid for NR 105 exceedance evaluation for certain substances.

Chloride concentrations varied little among the six samples analyzed in 2022, ranging from 29.5 milligrams per liter (mg/L) to 112 mg/L. The acute chloride toxicity surface water quality criteria, as listed in Table 1 of NR 105, is 757 mg/L. The chronic chloride standard for warm water sportfish is 395 mg/L, as listed in Table 5 of NR 105. Table 3 shows the chloride data relative to the applicable NR 105 standards.

Copper and lead were not detected in any of the six surface water samples collected in 2022. Zinc was detected in one (SW-28 – April) of the six surface water samples with a detected concentration estimated (J) value of 15.9 micrograms per liter ( $\mu\text{g}/\text{L}$ ). No metal results exceeded their respective standards relative to their applicable standard (analysis for zinc, copper, and lead) listed in Table 2 and Table 6 of NR 105. Table 4 shows the lead, zinc, and copper data relative to Table 2 and Table 6 of the NR 105 applicable standards.

Ammonia is regulated under Table 2C (acute toxicity), Table 4B (30-day chronic), and Table 4B (4-day chronic toxicity) of NR 105. The applicable standard is based on the temperature and pH of the sample water, and thus results from point to point or round to round are not directly comparable based on total concentrations. The samples collected from the April and October 2022 sampling events had no samples that exceeded the calculated standards from Table 2C and Table 4B. No other samples had concentrations above the acute or chronic standards. The last exceedance for ammonia at SW-28 was in the fall of 2021. The surface water locations will be sampled again in April 2023. Table 5 shows the ammonia data relative to the applicable NR 105 standards.

## 5. Groundwater Monitoring

### 5.1 Summary of Groundwater Monitoring Program

Figure 3 presents the network of monitoring wells identified for groundwater monitoring. The groundwater monitoring well network consists of a total of 35 wells, of which 29 are part of the monitoring program. These wells are screened in the upper, middle, and lower portions of the shallow regional aquifer.

Table 6 summarizes the sampling locations in the monitoring plan and illustrates any changes to the monitoring plan that have occurred during the monitoring period. A sample collection and analysis summary for the groundwater monitoring wells is included in Table 6.

During this reporting period, groundwater monitoring was conducted in April and October. The April 2022 sample event required collecting samples from nine monitoring wells. However, MW-28A, was inaccessible and not sampled due to spring flooding. The October 2022 round consisted of collecting samples from 20 monitoring wells and collecting field parameters only from 3 wells.

Monitoring well locations were sampled for analysis of volatile organic compounds (VOCs) + tetrahydrofuran. Select wells were sampled for ammonia/kjeldahl (TKN) nitrogen. Field parameters included in the sampling are pH, temperature, conductivity, oxidation-reduction potential, dissolved oxygen, and turbidity.

### 5.2 Hydraulic Monitoring Program

During this reporting period, GHD collected a water level measurement from each monitoring well during the annual fall sampling round. October 2022 groundwater contours for the upper "A" and middle "B" wells are presented on Figures 4 and 5. Groundwater elevations for the deep "C" wells are presented on Figure 6. Not enough data points were present to contour the "C" elevations. Table 7 presents the groundwater elevations for the October 2022 monitoring event.

Groundwater flow directions for the "A" and "B" wells exhibit a radial flow direction from the landfill to the surface water features located to the northwest (Slaughterhouse Creek) and southwest (Pelican River). Groundwater flows from the landfill towards Slaughterhouse Creek to the north and towards the Pelican River to the southwest.

The groundwater elevation data show upward vertical groundwater flow at monitoring well locations along Slaughterhouse Creek and Pelican River, which infers groundwater discharge into these surface water features.

## 5.3 Groundwater Sampling Program

Groundwater sampling was conducted in accordance with the April 29, 2016 letter from the WDNR to the RLG. Sampling methods are in accordance with the WDNR Groundwater Sampling Field Manual. Table 8 summarizes the monitoring well sampling events.

Samples were collected immediately after low flow purging and stabilization. Samples were placed in iced coolers and shipped via standard chain of custody procedures to Pace Analytical Laboratories in Green Bay, Wisconsin.

Appendix B contains a copy of the laboratory reports associated with the 2022 groundwater sampling events. A copy of the data quality assessments and validation memos are also provided in Appendix A.

Table 9 provides a summary of detected compounds in monitoring wells sampled during the April and October 2022 sampling events.

## 5.4 Groundwater Sampling Results

The analytical results from the 2022 sampling events, along with the previous six years, are presented on Table 9. The groundwater sampling results from 2022 are consistent with historical results. Groundwater laboratory reports for this period are in Appendix B.

### 5.4.1 VOCs

Three VOCs exceeded their respective Wisconsin Enforcement Standard (WES) in monitoring well samples collected during this reporting period: benzene, tetrahydrofuran, and vinyl chloride.

Benzene results exceeded the WES at one location (MW-2A). Tetrahydrofuran results exceeded the WES at three locations (MW-2A, MW-3A, and MW-21A). Vinyl chloride results exceeded the WES at ten locations (MW-2B, MW-16A, MW-16C, MW-18A, MW-20B, MW-20C, MW-25B, MW-26B, MW-26C, and MW-28A).

The VOC exceedances, along with the concentrations for the October 2022 monitoring event, are presented on Figure 7. Graphs of vinyl chloride concentrations over time at select well nests are provided in Appendix C.

### 5.4.2 Other Analytes

Ammonia exceeded the WES in the monitoring well samples collected during this reporting period at three locations (MW-2A, MW-3A, and MW-21A).

## 6. Conclusions and Recommendations

Based on the 2022 surface water and groundwater sampling activities, the following conclusions are made:

- No sample results from the 2022 surface water sampling events indicated an exceedance of any applicable standard.
- Other typical landfill parameters (ammonia) are present in groundwater but are not impacting the adjacent surface water.
- Groundwater exhibits a radial flow direction from the landfill towards Slaughterhouse Creek to the north and towards the Pelican River to the southwest.

- Three VOCs exceeded their respective WES in monitoring well samples collected during this reporting period: benzene, tetrahydrofuran, and vinyl chloride.
- Ammonia exceeded the WES in the monitoring well samples collected during this reporting period.
- The groundwater sampling results from 2022 are consistent with historical results.
- VOCs are sporadically present at low concentrations and do not indicate the presence of a plume emanating from the Site and impacting surface waters.

Based on the conclusions stated above, GHD, on behalf of the RLG, recommends the following:

- Currently, nine wells are sampled semi-annually, and eleven wells are sampled annually, GHD recommends sampling all twenty wells annually.
- Although groundwater samples are not collected from MW-19B, MW-19C, and MW-28B, field parameters are. GHD recommends discontinuing the collection of field parameters on these three wells.
- GHD recommends continuing the semi-annual sampling of the three surface water locations.

## Notes:

- Semi-Annual sampling will occur in April and October.
- Annual sampling will occur in October (along with a complete round of water level measurements).

1 One trip blank, which consists of a filled 40-mL preserved glass vial, shall be shipped with each cooler of VOC water samples.

2 For MS/MSD samples within a water matrix, triple the normal sample volumes will be collected.

3 Semi-Annual Wells currently include: 2A, 2B, 16A, 16B, 16C, 20A, 20B, 20C, 28A

4 Annual Wells currently include: 3A, 4A, 5A, 18A, 18B, 18C, 21A, 25B, 26B, 26C, 27B

5 Field Parameters are recorded for the following annual wells but are not sampled - 19B, 19C, 28B

6 Only the following wells are sampled for Ammonia-N and Kjeldahl-N - 2A, 3A, 21A

7 Upstream (Sample Point 10), Area 2 Restoration (Sample Point 28), Downstream at Newell St. Bridge (Sample Point 20)

RE: Project: 11115796 RHINELANDER LF  
Pace Project No.: 40243642

Dear Grant Anderson:

Enclosed are the analytical results for sample(s) received by the laboratory on April 20, 2022. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Green Bay

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Dan Milewsky  
dan.milewsky@pacelabs.com

## QUALIFIERS

Project: 11115796 RHINELANDER LF

Pace Project No.: 40243642

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor, percent moisture, initial weight and final volume.

LOQ - Limit of Quantitation adjusted for dilution factor, percent moisture, initial weight and final volume.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

### ANALYTE QUALIFIERS

H3        Sample was received or analysis requested beyond the recognized method holding time.

M0        Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.

RE: Project: 11115796 RHINELANDER LF  
Pace Project No.: 40252621

Dear Grant Anderson:

Enclosed are the analytical results for sample(s) received by the laboratory on October 06, 2022. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Green Bay

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Dan Milewsky

## QUALIFIERS

Project: 11115796 RHINELANDER LF

Pace Project No.: 40252621

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor, percent moisture, initial weight and final volume.

LOQ - Limit of Quantitation adjusted for dilution factor, percent moisture, initial weight and final volume.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

### ANALYTE QUALIFIERS

H3 Sample was received or analysis requested beyond the recognized method holding time.

M0 Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.

P6 Matrix spike recovery was outside laboratory control limits due to a parent sample concentration notably higher than the spike level.

New Brighton, MN 55112

RE: Project: 11115796 RHINELANDER LF  
Pace Project No.: 40243661

Dear Grant Anderson:

Enclosed are the analytical results for sample(s) received by the laboratory on April 20, 2022. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Green Bay

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Dan Milewsky

## QUALIFIERS

Project: 11115796 RHINELANDER LF

Pace Project No.: 40243661

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor, percent moisture, initial weight and final volume.

LOQ - Limit of Quantitation adjusted for dilution factor, percent moisture, initial weight and final volume.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

### ANALYTE QUALIFIERS

L1 Analyte recovery in the laboratory control sample (LCS) was above QC limits. Results may be biased high.

M0 Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.

RE: Project: 11115796 RHINELANDER LF  
Pace Project No.: 40252622

Dear Grant Anderson:

Enclosed are the analytical results for sample(s) received by the laboratory on October 06, 2022. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Green Bay

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Dan Milewsky

## QUALIFIERS

Project: 11115796 RHINELANDER LF

Pace Project No.: 40252622

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor, percent moisture, initial weight and final volume.

LOQ - Limit of Quantitation adjusted for dilution factor, percent moisture, initial weight and final volume.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

### ANALYTE QUALIFIERS

HS      Results are from sample aliquot taken from VOA vial with headspace (air bubble greater than 6 mm diameter).

M0      Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.
