---

Ryan,

I have reviewed the 2022 Site Monitoring Report for the Rhinelander Landfill and agree with your recommendations below. This email serves as your approval to switch to annual sampling on all twenty wells, and discontinuing the collection of field parameters on MW-19B, MW-19C, and MW-28B. In addition, semi-annual sampling of the three surface water locations will continue.

Let me know if you have any questions,

Thanks

Phil

Good Morning Phil,

Just reaching out to see if you have any thoughts on GHD's recommendations from the 2022 Site Monitoring Report? In particular, I'm wondering about reducing the sampling on the nine semi-annually sampled wells and switching to annual sampling. Let me know if you have any

questions or need any more information.

- *Currently, nine wells are sampled semi-annually, and eleven wells are sampled annually, GHD recommends sampling all twenty wells annually.*
- *Although groundwater samples are not collected from MW-19B, MW-19C, and MW-28B, field parameters are. GHD recommends discontinuing the collection of field parameters on these three wells.*
- *GHD recommends continuing the semi-annual sampling of the three surface water locations.*

Thanks,  
Ryan
