Matt.

Bc: Rebecca Godfrey (property owner)

Thanks for your review and comments.

The Project Engineer and I reviewed our report and our recommendations. We understand your reasoning. And, if this area was on public water system, we might be inclined to agree with the DNR's recommendation.

However, because the underlying sand aquifer is accessed by shallow, unfiltered, sand point wells, it is our professional opinion that the underlying sand aquifer should be sampled to confirm it is not impacted. It is possible/probable the sand point in the onsite building may fail and a new sand point installed elsewhere on the property.

Sampling the sand aquifer could be accomplished with piezometers or with Geoprobe (ground water profiling).

Would you like to discuss over the phone? Alternatively, perhaps another consultant should look at this site/report to seek their opinion.

Thanks.

Ken,

Thank you for the status update report. I have reviewed it and disagree that further investigation is necessary. No groundwater impacts were found in the shallower aquifer or potable wells and extremely limited soil contamination was identified above the water table.

Please submit a U&C Cost request to prepare a Case Closure request and CO packet for residual soil contamination at the site.

-Matt

Hi Matt.

Just checking in to make sure you received recent report for Grace's Store site (Shennington – Monroe County – BRRTS 0342204862).

Let me know if you have any questions.

Thanks
