Subject: G&D Mobil (WDNR BRRTS # 03-38-204911)

Hello Noel. The DNR has received and reviewed Bay's February 15, 2008 submittal for the G&D Mobil site. The DNR recommends the following:

- Install two additional push probes. One push probe is to be installed to the north of SB-4. The other push probe is to be installed adjacent to the property boundary and southwest of post excavation soil sample #1 South Bottom.
- Collect soil samples from each push probe using the sampling approach identified in Bay's November 28, 2007 work plan. Samples are to be laboratory analyzed for PVOCs and PAHs.
- Collect an additional round of groundwater samples from groundwater monitoring well MW-1 and the six temporary wells. Samples are to be laboratory analyzed for PVOCs and PAHs.
- If possible, locate and provide DNR with a copy of the well construction report for groundwater monitoring well MW-1.
- Provide the DNR with the exact location and size of the stockpile. Also, provide a brief summary of the sampling approach (e.g., how many samples will be collected and at what depths).

Within 60 days, please provide the DNR with a letter or report documenting the progress being made at the G&D Mobil site.

Thank you in advance for your assistance and feel free to contact me with any questions.
