Roger –

We have been troubleshooting some of the sampling and well locations based on the lack of access to the source property for Monitoring well installation. Also following our visit to the site MW – 10 looks like we won't be able to install as there are overhead electrical lines along the street. That said the plan is to ...

Install 6 wells: 2-piezometers(~40ft bgs), 3-monitoring wells (~25ft bgs), and 1-monitoring well at the bedrock interface (~15ft bgs)

5 soil samples from 4 soil borings – ON the source property – These are the ones we need the special inspection warrant for.

We are currently working on the special inspection warrant and hope to have it completed by June 11<sup>th</sup>. That being said we wanted to check in with you on the progress of the Site Safety Plan (we will include it in our warrant plan), and if you knew the specific dates (1 or 2) you plan to do the soil sampling on the source property. Currently we have 4 warden's who are saving the entire week of the 24<sup>th</sup> for this work and if we could free them up that would be helpful. The last question I have for you is do you know yet who will be in the field for soil sampling and which drilling team SES is planning on using?

Please let me know if you have any questions.

NOTE: I have the new phone number now (920)662-5443

Thank you,  
Sarah
