

August 18, 2016

Mr. Keld Lauridsen
Hydrogeologist/Project Manager
WDNR-Northeast Region RR
2984 Shawano Avenue
Green Bay, WI 54313-6727

RE: Summary of the August 8, 2016 groundwater sampling events at the Former American Quality Fibers site.

Dear Keld:

The purpose of this letter report is to summarize the groundwater sampling events conducted on August 8, 2016 at the former American Quality Fibers site. The former American Quality Fibers is located at 204 Railroad Street (BRRTS # 02-71-208585), Menasha, Wisconsin. (See Figure 1 – Site Location Map.) This report includes:

- Figure 1 – Site Location Map
- Figure 2 – Site Detail Map - Monitoring Well and Piezometer Locations
- Figure 3 – Soil Vent Well Locations
- Well Specific Field Sheet
- Table 2 – Groundwater Analytical Summary
- Monitoring Point Photograph Summary
- Laboratory Report

Groundwater elevations were only taken at the monitoring wells and piezometer that were sampled. Groundwater elevations were recorded on the well specific field sheets. (Reference Well Specific Field Sheets.)

Monitoring wells MW1, MW6, MW16, and piezometer P2 were sampled for volatile organic compounds (VOCs). A peristaltic pump was used to purge groundwater for 15 to 20 minutes before a grab sample was collected from these monitoring points.

Color, odor, and turbidity observations were recorded on well specific field sheets. The well specific field sheets also list the measured depth to water from the top of the PVC pipe, mean sea level groundwater elevation, the length of time spent purging and the approximate gallons of groundwater purged from each monitoring well/piezometer prior to taking the groundwater sample. (Reference Well Specific Field Sheets.)

Purged groundwater from the monitoring wells and piezometer was collected in 5-gallon buckets. The purged groundwater was poured back onto the base of trees nearest the monitoring point.

An attempt was made to collect soil samples by means of hand auger while at the site. Hand boring efforts were attempted at multiple locations near soil boring B1 and vent well V5. (See Figure 2 – Site Detail Map and Figure 3 – Soil Vent Well Locations.) Excessive gravel was experienced at about six inches from the surface at each location attempted, with a maximum depth of two feet reached before total refusal.

Unfiltered groundwater samples collected from the monitoring wells and piezometer were submitted for laboratory VOC analysis. Groundwater analytical methods are included with the laboratory report. (Reference Laboratory Report.) The laboratory analysis has been summarized in Table 2.

Groundwater enforcement standard and preventive action limit exceedances of VOCs remain in all of the monitoring points sampled. In general, results of the laboratory analysis were similar when compared to past sampling events. Monitoring wells MW1 and MW16 had some parameters lower than recent events and some parameters higher than recent events. Monitoring well MW6 had an overall decrease in contaminants since the last testing event. Piezometer P2 generally showed no change or a slight increase in laboratory detections.

Monitoring well MW1 and piezometer P2 are located directly beside each other near the eastern most row of trees, closest to the railroad tracks. Locations of monitoring wells and piezometers can be viewed on the site detail map. (Reference Figure 2 – Site Detail Map.)

If you have any questions on the enclosed information, please contact me at 920/830-6141 or by email at bwayner@omni.com.

Sincerely,
OMNNI Associates, Inc.

Brian D. Wayner, P.E.
Environmental Manager

"J" Flag: Analyte detected between LOD and LOQ

LOD Limit of Detection

LOQ Limit of Quantitation

Code ***Comment***

- 1 Laboratory QC within limits.
- 4 The continuing calibration standard not within established limits.

All solid sample results reported on a dry weight basis unless otherwise indicated. All LOD's and LOQ's are adjusted for dilutions but not dry weight. Subcontracted results are denoted by SUB in the analyst field.

Authorized Signature

A handwritten signature in blue ink, appearing to read "Michael J. Steel", is written over a horizontal line.
