RE: Monthly Progress Report for the Moose Junction Lounge UST
Removal near Dairyland, WI. Wisconsin Unique ID# 0301.

Dear Mr. Prohaska:

Earth Remediation Services (ERS) presents this monthly progress report as required by Administrative Order No. NWD-92-023. The following actions were completed in August 1993:

- * Completed the second groundwater sampling which included analytical samples from both the Margaret Dickman residence and the Moose Junction Lounge
- * Update correspondence for both the client and regulators
- * Aquifer testing (baildown tests) of all four monitoring wells
- * Log four shallow hand soil borings to determine if contamination is entering wetlands south of the Dickman residence

ERS plans to complete the remedial action plan when the final laboratory report for the second groundwater sampling event and the analytical samples from the soil boring near the wetlands are sent to ERS. If you have any questions concerning any aspect of this progress report, please call me at (218) 628-0248 during business hours.

Sincerely,

Roger W. Biebl
