RE: Quarterly Progress Report for the Moose Junction Lounge LUST Investigation near Dairyland, WI. Wisconsin Unique ID# 0301.

Dear Mr. Saari:

Earth Remediation Services (ERS) presents this Quarterly Progress Report as required by Administrative Order No. NWD-92-023. The following actions were completed in the third quarter of 1994:

- * Groundwater sampling on July 22, 1994 and review associated analytics,
- * Plan installation of a groundwater remediation system (convert monitoring well MW-2 into a recovery well).

Groundwater returned to 140 ppm in the July sampling event. (GRO concentrations were 140 ppm in November of 1993 and increased to 222 ppm in March, 1994). Groundwater degraded at the at the MW-3 and the MW-4 location with low concentrations of GRO and PVOC, however, EBI suspects laboratory error as MW- 3 has never recorded any contaminants. ERS plans to conduct the sixth groundwater sampling event in October, 1994. The conversion of MW-2 into a recovery well was not completed as previously scheduled because of monetary problems between our client and the Pecfa fund. Completion and sampling of the groundwater remedial project will resume as soon as funds for previous completed work are reimbursed. EBI still intends to complete the groundwater remediation. If you have any questions concerning any aspect of this progress report, please call me at (218) 628-0248 during business hours.

Sincerely,

A handwritten signature in cursive script that reads "Roger W. Biebl".
