**Subject:** RE: PFAS scoping statement needed for Moose Junction

REI was retained to complete a PECFA approved and authorized petroleum specific environmental investigation at the Moose Junction Lounge site in Moose Junction. The completed case closure submittal documents all known parameters approved for analysis under the direction of the PECFA program. In accordance with Wis. Admin. Code § NR 716.07, an evaluation of all potential contaminants associated with a hazardous substance discharge and/or environmental pollution, including emerging contaminants should be completed. Below is the site specific evaluation for potential PFAS compounds and other applicable emerging contaminants that were historically or are presently produced, used, handled, or stored at the site. The evaluation should include any available information on whether any products containing PFAS were used in any process services, the duration of PFAS-containing product use, the type of PFAS contained in the product, and any areas of the site where PFAS-containing products may have been used, stored, managed, or discarded.

REI, on behalf of our Client, researched past land use at the subject property. The subject property was originally developed as a tavern that eventually sold fuel. Based on REI's review of the historical documentation, the possibility of soil and/or groundwater contamination originating from PFAS or other identified emerging contaminant use on the subject property is considered minimal.

Thank you,

**CAUTION:** External Email.

Hi Dave, could you please supply a PFAS/emerging contaminate scoping statement for Moose Junction (03-16-000301). The site cannot officially close without a statement. If you need some examples, please let me know. Thanks, Carrie
