**Subject:**

Former V&L Stripping – Remediation Documentation and Update  
864 Mather Street  
Green Bay, WI 54303  
BRRTS #02-05-216722

**Dear Josie:**

This letter will summarize the installation of the vapor mitigation system, performance testing, and two (2) additional rounds of groundwater monitoring. The site location is shown on Figure 1. The site layout and monitoring well network is shown on Figure 2.

**Vapor Mitigation System Installation**

The vapor mitigation system was installed May 8, 2020 by A1 Radon & Vacuum of Green Bay, WI. The system size was based on the square footage of the building in accordance with standard industry practice. Photographs of the system are included in Attachment A. The system location is shown on Figure 2.

**Additional Groundwater Sampling**

The monitoring well network was sampled on May 13, and September 3, 2020 via low-flow techniques using a peristaltic pump through a flow cell. Continuous field measurements for temperature, conductivity, dissolved oxygen, pH and redox potential are collected and samples are captured once readings stabilize. Purge water was containerized in DOT approved drums and transported to the Wausau Waterworks wastewater treatment plant for disposal. Disposal documentation is included in Attachment B.

Groundwater flow has remained consistent to the west/southwest as shown on Figures 3a and 3b. Contaminant trends were similar across the network, with the progression showing continued decreases in Tetrachloroethylene (PCE) and Trichloroethylene (TCE) and increases in daughter products cis and trans 1,2 Dichloroethene (DCE) and vinyl chloride. Monitoring wells MW200, MW300, and MW1500 at the upgradient edge of the plume have decreased to non-detect or only slightly above the Enforcement Standard for PCE and TCE. A summary of groundwater data is included on Tables 2a-2r. The complete analytical reports are in Attachment C. The estimated extent of groundwater contamination for PCE, TCE, cis-1,2 DCE, trans-1,2 DCE, and vinyl chloride for each sampling event is depicted on Figures 4a-4d.

**RESPONSIVE. EFFICIENT. INNOVATIVE.**

4080 N. 20th Avenue Wausau, WI 54401  
715-675-9784 REIengineering.com

The water table has fluctuated approximately one (1) foot in the four (4) rounds since CAP 18 injection and may represent some of the variation in contaminant level. The May 13, 2020 event represents some of the highest elevations recorded. Historical groundwater elevations are summarized on Table 3. A graphical depiction of contaminant concentration vs. groundwater elevation and time for the affected monitoring wells is shown on Figures 5a-5g.

### **Vapor Mitigation System Performance Monitoring**

In accordance with the approved remedial action plan, ambient air sampling was conducted in the three (3) quadrants of the building, and exterior on September 3, 2020. The building is currently used for automotive repair, and a variety of petroleum and automotive service products such as gas cans, brake cleaner, waste oil, air conditioner refrigerant, parts cleaner, and propane are stored in the western storage area, and eastern shop area. One-liter Summa cans were utilized to capture 8-hour ambient air samples of the western storage area (West), center office area (Center), eastern shop area (East) and ambient exterior air (Entrance/Exterior). Sample locations are shown on Figure 6. Photographs are included in Attachment A.

A 0.0-0.5 inches of water Magnelhelic vacuum gauge was used to detect sub-slab vacuum from temporary wells TW900 and TW1400 within the building. Low level vacuum (0.05 inches of water) was recorded in TW900, adjacent to the vapor mitigation system. No vacuum was apparent at TW1400.

Vapor results are summarized on Table 4. All four (4) samples contained benzene, ethylbenzene, and naphthalene above the Residential Vapor Action Limit. Benzene and naphthalene also exceeded the Commercial Vapor Action Limit (VAL). Sample "West" also exceeded the Commercial VAL for Acrolein. PCE was detected in all three (3) indoor air samples (West, Center, East) at levels well below the VAL. TCE was detected only in the Center sample at a concentration well below the VAL. Cis-1,2 DCE, trans-1,2 DCE, and Vinyl Chloride were non-detect in all four (4) samples. The lab report is included in Attachment D.

According to a Guest Article titled "Problematic Compounds in Vapor Intrusion Investigations" by Mr. Bart Eklund, the Global Practice Leader for Vapor Intrusion at AECOM, Acrolein is primarily used as an intermediate in the synthesis of acrylic acid and as a biocide. It may be formed from the breakdown of certain pollutants in outdoor air or from the burning of organic matter including tobacco, or fuels such as gasoline or oil. Airborne exposure to acrolein may occur by breathing contaminated air, by smoking tobacco or by being in the proximity of someone who is smoking, by being near vehicle exhaust, or by being near oil- or coal-fired power plants. This is reasonable given the use of the western storage area, which includes the furnace, and storage of a lawn mower. The study also notes that acrolein is sometimes detected in canisters, especially if the samples contain high levels of certain polar compounds such as acetone or methyl ethyl ketone (MEK). Low levels of both compounds were detected in all four (4) samples.

### **Conclusion and Recommendations**

The CAP 18 injection has been successful in enhancing reductive dechlorination at the site. Levels of PCE and TCE have shown a consistent decrease since the injection. Levels of daughter products cis and trans-1,2 DCE, and vinyl chloride have increased as a result, but are expected to stabilize or decrease in the next four (4) rounds.

The vapor mitigation system has been successful in limiting vapor intrusion for chlorinated VOCs into the building. The current use of the building, as well as it's proximity to a high traffic road and nearby industrial use appears to be the source of petroleum VOCs in the air samples.

WDNR  
Attn: Josie Schultz  
October 5, 2020

The remedial action plan calls for four (4) additional rounds of groundwater sampling, with closure submittal thereafter. The next round is scheduled for December 2020.

Thank you for your assistance with this project. Please contact me to discuss further at (715) 675-9784 or email me at Adelforge@REIengineering.com.

Sincerely,  
REI Engineering, Inc.

**DISPOSAL DOCUMENTATION**

Date: 8-8-07

**SPECIAL DISCHARGE FORM**  
GROUNDWATER CLEANUP PROJECTS

This form is intended to document the discharge of contaminated groundwater or process waters into the Wausau Wastewater Treatment Facility. Sewerage Utility billing for this discharge will be directly to the party listed below.

Source of Water: Monitoring Well purge water  
Up to 500 gallons, no free product, no strong or volatile odors

Party Responsible for Utility Charges:

Dave Larsen  
REI Engineering Inc.  
4080 N 20th Ave  
Wausau WI 54401

Approved By: [Signature]

Wausau Sewerage Utility

**TO BE COMPLETED BY WASTE HAULER**

Name of Waste Hauler:

REI Engineering, Inc.

Disposal date 6/08/2020

Approximate quantity of water discharged: 623 gallons

Date of Discharge: 6/8/20

Time of Discharge: \_\_\_\_\_

By submitting this form, the hauler will not be billed for this load. Special Discharge Request has been completed to obtain authorization for this discharge but please notify treatment plant operator if water contains oil, grease, solids, or sediments, has a strong odor or otherwise appears unsuitable for discharge into the treatment plant.

# **GROUNDWATER LABORATORY ANALYTICAL REPORTS**

May 29, 2020

Andy Delforge  
REI  
4080 North 20th Avenue  
Wausau, WI 54401

RE: Project: 8318 V&L STRIPPING  
Pace Project No.: 40207818

Dear Andy Delforge:

Enclosed are the analytical results for sample(s) received by the laboratory on May 15, 2020. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Green Bay

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Brian Basten

## QUALIFIERS

Project: 8318 V&L STRIPPING

Pace Project No.: 40207818

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor, percent moisture, initial weight and final volume.

LOQ - Limit of Quantitation adjusted for dilution factor, percent moisture, initial weight and final volume.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

### ANALYTE QUALIFIERS

D3 Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.

E Analyte concentration exceeded the calibration range. The reported result is estimated.

H1 Analysis conducted outside the recognized method holding time.

H3 Sample was received or analysis requested beyond the recognized method holding time.

H6 Analysis initiated outside of the 15 minute EPA required holding time.

M0 Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

R1 RPD value was outside control limits.

RE: Project: 8318 U&L STRIPPING  
Pace Project No.: 40214184

Dear Andy Delforge:

Enclosed are the analytical results for sample(s) received by the laboratory on September 05, 2020. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Green Bay

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Brian Basten

## QUALIFIERS

Project: 8318 U&L STRIPPING

Pace Project No.: 40214184

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor, percent moisture, initial weight and final volume.

LOQ - Limit of Quantitation adjusted for dilution factor, percent moisture, initial weight and final volume.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

### ANALYTE QUALIFIERS

D3 Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.

E Analyte concentration exceeded the calibration range. The reported result is estimated.

H1 Analysis conducted outside the recognized method holding time.

H3 Sample was received or analysis requested beyond the recognized method holding time.

H6 Analysis initiated outside of the 15 minute EPA required holding time.

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

"J" Flag: Analyte detected between LOD and LOQ

LOD Limit of Detection

LOQ Limit of Quantitation

**Code**      **Comment**

1              Laboratory QC within limits.

All solid sample results reported on a dry weight basis unless otherwise indicated. All LOD's and LOQ's are adjusted for dilutions but not dry weight. Subcontracted results are denoted by SUB in the analyst field.
