Subject: July 2015 Progress Report, One Hour Martinizing Site, 1233 S. Military Ave., Green Bay, Wisconsin -- BRRTS #02-50-217270 – AECOM Project No. 60310036

Dear Mr. Nass,

This progress report is being submitted by AECOM Technical Services, Inc. (AECOM) to summarize environmental services performed at the One Hour Martinizing site, 1233 South Military Avenue, Green Bay, Wisconsin. The report provides results of environmental testing services between late 2013 and June 2015 including monitoring well groundwater sampling, sump water sampling, and vapor monitoring. The services were described in two proposals: one dated June 2013 and one January 2015. The proposals were provided to the Wisconsin Department of Natural Resources (WDNR) for eventual reimbursement via the Wisconsin Dry Cleaner Environmental Reimbursement Fund (DERF). Results of the sump water and vapor sampling are prompting recommendations for further remedial action.

Background

A brief summary of site activities follows:

- In 1967, the One Hour Martinizing (dry cleaning) facility began operation.
- In 1972, Mr. Peter Fink acquired the property as a partnership along with two other partners.
- In 1975, Mr. Fink bought the interests of his other two partners and operated the business as a proprietorship until 1997, when the business was incorporated.
- In 1999 a Phase II environmental assessment identified tetrachloroethylene (PCE) contamination associated with the dry-cleaning operations. AECOM's heritage company STS Consultants, Ltd., was retained by the property owner to conduct a subsurface investigation which included installation of 10 monitoring wells/piezometers and associated soil testing and groundwater quality monitoring.
- In 2002, the WDNR approved natural attenuation monitoring as the remedial action on the site.

This document includes proprietary data that shall not be duplicated, used or disclosed outside Synergy Investors, LLC for any purpose other than to evaluate this document. This restriction does not limit Synergy Investors, LLC's right to use information contained in this document if it is obtained from another source without restriction.

- From 2002 to 2007 groundwater samples were collected for natural attenuation monitoring. A May 2007 groundwater sampling event indicated that PCE concentrations had decreased.
- In 2008, the property was acquired by Synergy Investors, LLC, of Green Bay, Wisconsin, after Mr. Fink passed away.
- In March 2011 and May 2013, the WDNR requested a status update including collection of a round of groundwater samples and soil vapor assessment.
- On June 28, 2013, AECOM provided a Work Plan and Cost Estimate proposal to conduct two rounds of groundwater monitoring of existing monitoring wells.
- In the first half of 2015, AECOM developed a proposal for vapor sampling. AECOM, WDNR, and Synergy discussed locations for vapor testing. It was decided that four sumps in the building would be sampled along with one temporary vapor well installed in a utility trench on the east side of the building. Water samples would also be collected from the sumps.

The following describes procedures and the results of the sampling conducted, and provides recommendations for further actions.

Procedures and Results of Testing

1.0 Groundwater Monitoring

AECOM mobilized to the site on two occasions (November 2013 and March 2014). Groundwater samples were collected from the ten groundwater monitoring wells/piezometers to assess current volatile organic compounds (VOC) along with natural attenuation parameters including methane, ethane, ethane, chloride, sulfate, and nitrate/nitrite. Groundwater elevations were also measured. The groundwater samples were submitted to Pace Analytical Laboratory (Pace) in Green Bay, Wisconsin, for analyses.

Results of the groundwater monitoring are attached. Groundwater monitoring results continue to show that VOC concentrations in Monitoring Wells MW-2, MW-5, MW-7, and PZ-6 are below Wisconsin Administrative Code Chapter NR 140 enforcement standards (ES), preventive action limits (PAL), and in most cases below method detection limits. Further, review of the data indicates that although chlorinated VOC concentrations remain above the ES in Monitoring Wells MW-1, MW-3, MW-6, and PZ-1, these concentrations are decreasing over time. The compounds with regulatory exceedances are primarily tetrachlorethene (PCE), trichlorethene (TCE), cis & trans 1,2 dichloroethene (cis & trans 1,2-DCE), and vinyl chloride. Natural attenuation monitoring indicates some chloride generation in MW-1, possibly indicating reductive de-chlorination of VOCs. A comparison of water elevations measured in 2013 and 2014 to historic water levels indicates groundwater elevation and flow direction is highly variable, likely dependent on precipitation events and buried utilities.

2.0 Sump Water Monitoring

In addition to the vapor monitoring discussed below, the WDNR also requested sampling of water in the sumps in the partial basement of the south half of the complex housing One Hour Martinizing.

On June 10, 2015, water samples were collected from three sumps (18-inch sump, 48-inch sump, boiler room sump) depicted in the attached photolog, and submitted to Pace for VOC analysis. The ejector pit did not have enough volume of water for sampling. These sample results are summarized on Table 2. A review of Table 2 indicates chlorinated VOCs above ES levels are present in the sumps and will need to be further addressed.

3.0 Vapor Monitoring

On June 10, 2015, AECOM conducted vapor sampling at five locations along the east side of the facility as depicted on the attached photolog. A brief description of the vapor sample locations follows:

Temporary Vapor Well (Photo 1) was installed along the east side of the building in a utility trench between a water service line and natural gas line going into the building, just south of Monitoring Well MW-3. The well was installed by advancing a hand auger to a depth of 4 feet (just above the water table), installing a 5-foot long piece of 1-inch PVC with the bottom 2 feet consisting of well screen. Filter pack sand was placed in the annulus near the screen and hydrated bentonite in the annulus around solid riser pipe. After using a shop vac to remove some stagnant vapor, a Summa Canister was connected via tubing to collect a vapor sample. This canister along with the other four described below were submitted to Pace for EPA TO-15 vapor analysis for chlorinated VOCs (PCE, TCE, cis/trans-DCE, and vinyl chloride). Pace's lab data is attached and indicates PCE detections in the utility trench.

The Boiler Room Sump (Photo 2) was sampled for vapor using a hydrated bentonite paste securing a piece of plastic sheeting over the sump. Due to many obstructions, it was not possible to use a helium shroud over the sump locations. Pace's lab data is attached and indicates PCE and TCE vapor concentrations in the sump above screening limits.

The 18-inch and 48-inch sumps (Photo 3 and 4) were also sealed using plastic sheeting but obstructions around the sumps likewise prevented use of a helium shroud. A review of the lab results indicates detection of one or more of the five chlorinated VOC compounds with screening level exceedances in the 48-inch sump.

The Sewer Ejector Pit (Photos 5 & 6) was also sampled for vapors. The cover is designed to create a vapor tight seal. Consequently, the vapor sample was collected with the cover in place; the vent pipe cut and capped; and, the tubing and canister connected to the capped vent pipe. Chlorinated VOCs were also detected in the ejector pipe.

Conclusions and Recommendations

Recent and historic groundwater quality monitoring indicates that although chlorinated VOC are still present above NR 140 ES values, concentrations are decreasing over time. Given that Monitoring Wells MW-2, MW-5, and MW-7 continued to demonstrate no detections of VOCs, and the historic data at abandoned MW-4 on the west side of the building, it is AECOM's opinion that the groundwater plume is laterally delineated. A vinyl chloride detection in PZ-6 should be monitored to assure that the vertical extent of the plume, as shown in the past, remains delineated.

The most significant issues in AECOM's opinion are the detections of chlorinated VOCs in the sump water and vapor, indicating a possibility that VOCs could be migrating into the building basement

via groundwater or vapor movement. At a minimum, AECOM recommends the sumps be capped to reduce the possibility that the sumps are a vapor migration pathway into the building. AECOM also recommends indoor vapor samples be collected in the building basement to determine if more aggressive vapor mitigation may be necessary. Once this report is reviewed by the WDNR we recommend that the next steps for possible VOC vapor mitigation be discussed. Also, we understand that Synergy Investors may have recently sold the property and building to another party which will add a layer of communication to any future investigation work. A site access agreement will need to be developed with the new owner.

We appreciate the opportunity to provide environmental services to Synergy Investments, LLC. Please contact Bob Mottl (920-406-3147) or by email (Robert.mottl@aecom.com) with any questions.

Sincerely,

AECOM Technical Services, Inc.

PHOTOGRAPHIC LOG

Client Name: Synergy Investors		Site Location: One Hour Martinizing, Green Bay	Project No.: 60310036
Photo No. 1	Date: 6/10/15		
Direction Photo Taken: North			

Photo No. 2	Date: 6/10/15	
Direction Photo Taken: West		
Description: Vapor sampling inside boiler room. Bentonite paste was used to help seal plastic sheeting onto floor. Some condensation water from a roof drain is present because the drain was sealed during testing.		

PHOTOGRAPHIC LOG

Client Name: Synergy Investors		Site Location: One Hour Martinizing, Green Bay	Project No.: 60310036
Photo No. 3	Date: 6/10/15		
Direction Photo Taken: North (in basement)	Description: Vapor sampling 18- inch sump		

Photo No. 4	Date: 6/10/15	
Direction Photo Taken: East (in basement)	Description: Vapor sampling 48- inch sump. Used 6- mil plastic sheeting to try to seal large opening under a constructed wall.	

PHOTOGRAPHIC LOG

Client Name: Synergy Investors		Site Location: One Hour Martinizing, Green Bay	Project No.: 60310036
Photo No. 5	Date: 6/10/15		
Direction Photo Taken: East (in basement)			

Photo No. 6	Date: 6/10/15	
Direction Photo Taken: South (in basement)		
Description: Vapor sampling vent line from sewer ejector. Vent pipe was cut and the bottom portion capped. A sample port was attached to the side of the pipe. Pipe was repaired after sampling.

RE: Project: 60310036 ONE HOUR MARTINIZING
Pace Project No.: 4087872

Dear Bob Mottl:

Enclosed are the analytical results for sample(s) received by the laboratory on November 05, 2013. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kang Khang

QUALIFIERS

Project: 60310036 ONE HOUR MARTINIZING

Pace Project No.: 4087872

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PRL - Pace Reporting Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-G Pace Analytical Services - Green Bay

ANALYTE QUALIFIERS

M0 Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.

RE: Project: 60310036 ONE HOUR MARTINIZING
Pace Project No.: 4093866

Dear Bob Mottl:

Enclosed are the analytical results for sample(s) received by the laboratory on March 27, 2014. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kang Khang

REPORT OF LABORATORY ANALYSIS

QUALIFIERS

Project: 60310036 ONE HOUR MARTINIZING

Pace Project No.: 4093866

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PRL - Pace Reporting Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-G Pace Analytical Services - Green Bay

ANALYTE QUALIFIERS

M0 Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.

RE: Project: 60310036 ONE HOUR MARTINIZING
Pace Project No.: 40116288

Dear Bob Mottl:

Enclosed are the analytical results for sample(s) received by the laboratory on June 10, 2015. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Christopher Hyska

QUALIFIERS

Project: 60310036 ONE HOUR MARTINIZING
Pace Project No.: 40116288

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor and percent moisture.

LOQ - Limit of Quantitation adjusted for dilution factor and percent moisture.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-G Pace Analytical Services - Green Bay

RE: Project: 60310036 One Hour Martenizing
Pace Project No.: 10310038

Dear Bob Mottl:

Enclosed are the analytical results for sample(s) received by the laboratory on June 12, 2015. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Carolynne Trout

QUALIFIERS

Project: 60310036 One Hour Martenizing
Pace Project No.: 10310038

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor and percent moisture.

LOQ - Limit of Quantitation adjusted for dilution factor and percent moisture.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-M Pace Analytical Services - Minneapolis

ANALYTE QUALIFIERS

A3 The sample was analyzed by serial dilution.
