Date: Thursday, March 14, 2024 2:14:00 PM

Joe,

I looked over the 2023 Remediation Progress Report for the Tank 70 site. Considering that there has been no downgradient monitoring since approximately 2017 Cenovus should consider installing replacement monitoring wells for the abandoned MW-1R and MW-7 and resume downgradient groundwater monitoring. At the time these wells were abandoned it was thought that the Tank 70 site may be submitted for possible closure. Since it has been approximately 7 years since downgradient groundwater monitoring was conducted it is highly unlikely that closure would be considered in the future without continued downgradient monitoring. If Cenovus is not considering submitting this site for closure down gradient groundwater monitoring is still necessary to confirm the contamination is not expanding and for assessing the need for additional remedial action. Please let me know if you would like to discuss.

We are committed to service excellence.

Visit our survey at <http://dnr.wi.gov/customersurvey> to evaluate how I did.
