Subject: FW: Change Order - Webster Pig Farm-APPROVED!

Carrie.

Per our recent phone and email communications, we agree the monitoring well network and PWs should be sampled in March.

However, we are modifying the October 11, 2019 Change Order (attached) as follows:

Change Lab analysis from PVOC+Naphthalene (U&C W4) to VOC (W5). The reason for this change is because of the 1,2 DCA found in the Town Hall well. Although the concentrations are very low (below NR140 ES), two samples did exceed PALs. Therefore, we recommend we sample ALL wells for VOC (so that we can test for 1,2 DCA). Our expectation is the data will be consistent with earlier results and should not prevent Closure. However, NOT collecting this data might affect Closure.

This is a monetary change of \$74.09 (W5) - \$31.26 (W4) = \$42.83 x 21 samples = \$899.43

We will use Method 524.2 for the private well samples (already approved in Change Order).

I think an email approval from you might be sufficient, but best to check with Chris/Jenna. Let me know if you need a formal Change Order from me.

Thanks

Hi Ken, attached is the approval letter for 2 rnds of GW sampling all MWs/PZ (PVOC + Naph), Closure pkg prep with engineer review. No GW report. I changed your original request to (21) MWs/PZs sampled and changed the sampling of the (4) PWS to VOCS method 524.2. Raw labs need to be submitted after the 1st round. If you have any questions, let me know. A hard copy will be sent via USPS. Thanks, Carrie
