March 6, 2018

Mr. Michael Schmoller  
Wisconsin Department of Natural Resources-South Central Region  
3911 Fish Hatchery Road  
Fitchburg, WI 53711

Subject: 2017 Semi-Annual (November event) Groundwater Sampling Letter Report  
Trent Tube Plant No. 1 2188 Church St., East Troy, WI (Site)  
FID # 265097030; BRRTS NO. 02-65-245827; U.S. EPA ID WID 006097281

Dear Mr. Schmoller:

On behalf of EnPro Holdings, Inc. (EnPro Holdings), RJRudy LLC (RJR) is submitting this Semi-Annual Groundwater Sampling Report for the above-referenced Site, which includes descriptions and results of groundwater monitoring activities performed on November 20-21, 2017, and phytoremediation system monitoring activities performed on October 20, 2017. This report was prepared to comply with requirements of s. NR 724.13(3) of the Wisconsin Administrative Code (WAC).

#### **PUMP AND TREAT SYSTEM PERFORMANCE MONITORING AND RESULTS**

RJR completed semi-annual groundwater monitoring field activities at the Site in November 2017. The field activities included measurement of groundwater levels, collection of groundwater samples, and quantification of field water quality parameters from eighteen monitoring wells<sup>1</sup> across the Site. This event did not include samples from any of the recovery wells. The Groundwater Extraction and Treatment System (GETS) continues to operate normally and effluent concentrations have been below permitted limits. EnPro Holdings continues to submit the required discharge monitoring reports to the Wisconsin Department of Natural Resources (WDNR) on a timely basis.

#### **Water Level Measurements**

Prior to well purging and sampling, RJR measured groundwater levels using a Solinst™ water level instrument. RJR decontaminated all equipment between sampling of each well location. RJR collected surface water elevations from measurements that were obtained directly from staff gauge locations SG-A and SG-9A (I) (see Attachment A). A groundwater elevation map based on water level measurements is provided in Attachment A as Figure 1.

#### **Survey**

On November 15, 2017, Jacob Tetzlaff of LandTech Surveying performed a survey of all monitoring wells, observation points, recovery wells, staff gauges, and the locations of the two recovery sumps by the former flume area. This updated survey information is provided in Attachment A, Table A.1.

---

<sup>1</sup> Prior to the 2016 semi-annual event, twenty wells were sampled. However, two of the wells could not be sampled in 2016 or 2017: MW-6 was dry and MW-23 could not be located. After multiple attempts to locate MW-23 using historical data and physical exploration, RJR has determined that MW-23 is lost/abandoned. MW-23 will not be included in subsequent sampling events.

### **Groundwater Sampling**

Following the collection of water level measurements, RJR purged monitoring wells until a minimum of four well casing volumes were removed or the well went dry. RJR conducted groundwater sampling in accordance with chapter NR 140 WAC requirements and the Groundwater Sampling Field Manual (WDNR, 1996). Attachment B contains results summary tables, the associated PACE laboratory reports, and Chain of Custody reports for groundwater monitoring wells sampled during this semi-annual groundwater monitoring event.

Following well purging, RJR collected groundwater samples and submitted the samples to Pace Analytical Services, Inc. 1241 Bellevue Street - Suite 9 Green Bay, Wisconsin 54302 (WDNR ID No. 405132750). The groundwater samples were analyzed for chlorinated volatile organic compounds (CVOCs) (EPA-SW846-8260).

For Quality Assurance/Quality Control (QA/QC), two duplicate samples and one trip blank were analyzed for CVOCs. Equipment blanks were not collected because RJR used new disposable bailers or laboratory-supplied transfer containers to sample at each monitoring location. QA/QC samples were processed and handled in the same manner as actual samples. Concentrations detected in duplicate samples were similar to concentrations detected in the corresponding original samples, and the trip blank results showed no detected constituents.

### **Field Water Quality Measurements**

Following purging and sampling, RJR measured field water quality parameters using a YSI 556 MPS Multimeter water quality meter. Water quality parameters included dissolved oxygen (DO), oxidation-reduction potential (ORP), temperature, pH, and specific conductivity. These measurements are included on forms provided in Attachment B.

### **Groundwater Analytical Results**

Table B.1 in Attachment B presents the results of the groundwater sampling. Table B.2 in Attachment B provides a comparison of semi-annual results since May 2015. General observations from these November 2017 groundwater results are as follows:

- The following VOCs were detected - chloroethane, 1,1-dichloroethane (DCE), 1,1-dichloroethene, cis-1,2-DCE, trans-1,2-DCE, vinyl chloride and naphthalene. These compounds have been consistently detected above WDNR standards in monitoring wells 02, 04, 07R, 12, 15, 16, 17R, 19, 37R and Observation Points 02, 03, and 09 in past sampling events, however have decreased in concentration over time.
- Most on-site monitoring wells show stabilization or a decrease in concentrations of CVOCs. Historical TCE concentrations in MW-2 range from 8890 µg/L (May 2013) to 7110 µg/L (June 2016). The results indicate that the GETS and phytoremediation system (discussed below) are continuing to effectively remediate the Site.

Except for MW-19, all wells south of Honey Creek (MW-20, MW-25, MW-27 and MW-29) continue to show no detections of CVOCs in any samples. MW-19 had a detection of vinyl chloride of 0.26 µg/L J (November 2017), down from 10.3 µg/L in June 2017. Furthermore, a "J" value qualifier means that this is an estimated concentration at or above the Limit of Detection and below the Limit of Quantification thus this vinyl chloride may not be present at all at this location.

## **PHYTOREMEDIAION SYSTEM MONITORING AND RESULTS**

RJR collected tree core samples from 29 trees on October 20, 2017. All cores were analyzed at the Utah Water Level Research Laboratory (UWRL) for TCE and several other CVOCs. The approximate location of the trees sampled is shown in Figure 2 of Attachment C. RJR conducted this tree core sampling following the methodology described in the May 2016 Phytoremediation Monitoring and Maintenance Plan and the 2017 Remediation Site Operation, Maintenance, Monitoring & Optimization Report. RJR sampled the same 29 trees twice per year: once in early June and once in October.

Attachment C includes all October 2017 physical tree analytical and circumference data. RJR collected core samples at an average of 42 cm above the ground surface and noted the circumference of each tree at the sample location (Note: Tree 029 is a cottonwood and has a larger diameter than the poplars). Cores were generally collected from trees with the largest trunk circumferences that were located near groundwater monitoring wells. Table C.1 provides a summary of CVOC analyte ranges for this event and the previous three core sampling events and the number of trees with specific detections.

### **Tree Core Analytical Results**

Figure 2 shows TCE tree core data for October 2017 and the three previous sampling events. Detailed results for each of the 29 trees that were sampled are presented in Table C.2 (June/October 2016 and June 2017). RJR collected quality control samples (two trip blanks and duplicates) during the October 2017 event. The trip blanks were non-detect for all constituents. The CVOC concentrations detected in duplicate samples were similar to CVOC concentrations detected in the corresponding original samples. Detailed results including tree sample trunk height, circumference, duplicate/trip blank, and EQL limits are provided in Attachment C.

The October 2017 tree core data show detectable concentrations of TCE in all 29 tree core samples. In general, higher tree core sample TCE concentrations correlate with elevated TCE groundwater plume concentrations detected in nearby wells. Since June of 2016, noticeable growth has occurred in all trees (Table C.3). The results indicate that the trees are growing and continuing to take up TCE, which is in turn remediating and inhibiting the expansion of the contaminant groundwater plume.

### **Recommendations**

As defined in the Phytoremediation Monitoring and Maintenance Plan, RJR performed a June and an October tree core sampling in both 2016 and 2017. Based on the consistency of the results in the prior four sampling events, RJR recommends that the tree core sampling schedule be modified from two times per year to once per year in coordination with the annual groundwater sampling event in June. EnPro Holdings requests WDNR's written approval of this change to the sampling schedule.

Please call me at 303-459-0164 or email at [rickrudy@rjrudyllc.com](mailto:rickrudy@rjrudyllc.com) if you have any comments or questions regarding this submittal.

Sincerely,  
RJR

Table B.1 - RJR TT-1 November 2017 Semi-Annual Groundwater Summary Table  
Table B.2 - RJR Semi-Annual Groundwater Monitoring Wells VOC Historical Comparison Table  
PACE Laboratory Data  
Groundwater Well Sample Field Sheets and Documents

**Table B.1**  
**RJR TT-1 November 2017 Semi-Annual Groundwater Summary Table**  
**Volatile Organic Compound Results**

**Explanation**

TOC - Total Organic Carbon  
NA - Not analyzed  
NE - Not established  
NR - Not reported  
< - Analyte not detected at quantitation limit – not detected  
J - Estimated  
**123** - Bold indicates exceedance of RCL  
TOC - Total organic carbon  
HP - Hydraulic probe  
GP - Geoprobe  
MW - Monitoring well  
RW - Recovery well  
All concentration values are in µg/kg unless noted.

**Table B.2**  
**RJR Semi-Annual Groundwater Monitoring Wells**  
**VOC Historical Comparison Table**

**Explanation**

TOC - Total Organic Carbon  
NA - Not analyzed  
NE - Not established  
NR - Not reported  
< - Analyte not detected at quantitation limit - not detected  
J - Estimated  
**123** - Bold indicates exceedance of RCL  
TOC - Total organic carbon  
HP - Hydraulic probe GP - Geoprobe  
MW - Monitoring well  
RW - Recovery well

All concentration values are in µg/kg unless noted.

RE: Project: FORMER TRENT TUBE PLANT 1 TT1  
Pace Project No.: 40161315

Dear Rick Rudy:

Enclosed are the analytical results for sample(s) received by the laboratory on November 22, 2017. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Christopher Hyska  
christopher.hyska@pacelabs.com

## QUALIFIERS

Project: FORMER TRENT TUBE PLANT 1 TT1

Pace Project No.: 40161315

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor and percent moisture.

LOQ - Limit of Quantitation adjusted for dilution factor and percent moisture.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.
