Subject: Site Investigation Update
Arctic Laundry & Cleaners (former)
5619 22nd Avenue, Kenosha, Wisconsin
BRRTS # 02-30-245843

Dear Mr. Cieslak

SCS Engineers (SCS) is providing the following summary of recent environmental site investigation work performed for the Arctic Laundry & Cleaners site located at 5619 22nd Avenue, Kenosha, Wisconsin (**Figure 1** and **Figure 2**). Investigation methods, findings, and recommendations are provided below.

GROUNDWATER MONITORING

SCS conducted a third round of groundwater monitoring on October 1, 2019. The monitoring included measuring water levels and collecting groundwater samples from site groundwater monitoring wells (MW-1, MW-2, and MW-3). For quality control purposes, one duplicate sample and a trip blank were also collected. Dedicated bailers were used for sampling each well and all samples were properly preserved in laboratory-supplied containers and transported under chain of custody to TestAmerica of University Park, Illinois, for analysis of volatile organic compounds (VOCs) via laboratory method 8260B. The laboratory report is included in **Appendix A** and results are summarized in **Table 1** and below.

Dry cleaner-related contaminants were not detected in the MW-1 or MW-2 samples. Dry cleaning solvent, tetrachloroethylene (PCE), was detected in the MW-3 and MW-3 duplicate samples at concentrations in excess of the NR 140 enforcement standard (ES).

Based on the October 2019 water levels, groundwater flow is to the west at a gradient of approximately 0.025 feet per foot as shown on **Figure 3**. This flow direction and gradient is consistent with that observed during prior sampling events. Water level measurements are summarized in **Table 2**.

Based on the sampling results to date, groundwater with PCE in excess of the ES appears to be limited to the source property (5619 22nd Avenue) and neighboring 5611 22nd Avenue property, and the concentrations appear to be stable. SCS plans to conduct a fourth round of groundwater monitoring in January 2020.

VAPOR INTRUSION ASSESSMENT SAMPLING AND MITIGATION

Vapor Sampling

On October 2, 2019, SCS collected a second round of sub-slab vapor, indoor air, and outdoor (background) samples for the nearby buildings at 5605 22nd Avenue (Midnight Liquor & Bar) and 5621/5625 22nd Avenue (Pa's Pizzeria). Initial sampling for the buildings was performed in January 2018.

The October 2019 samples were collected in laboratory-supplied 6-liter canisters equipped with 30-minute flow controllers for sub-slab sampling or 24-hour controllers for indoor/outdoor air sampling. SCS tested sub-slab vapor pin® (vapor pin) seals and sampling equipment prior to collection of each sub-slab sample. No leaks were detected.

Sub-slab samples could not be collected from vapor pins SS-4 or SS-5 in the basement of Pa's Pizzeria (5621 22nd Avenue) due to the presence of water in the vapor pins. The water was likely resulted from heavy rainfall which occurred the day before on October 1, 2019.

The samples were transported under chain of custody to Pace Analytical Services of Minneapolis, Minnesota, for analysis of chlorinated volatile organic compounds (CVOCs) including PCE, trichloroethylene (TCE), cis-1,2-dichloroethene (cis-1,2-DCE), trans-1,2-dichloroethene (trans-1,2-DCE), and vinyl chloride via laboratory method TO-15. The laboratory report is included in **Appendix A** and results are summarized in **Table 3** and **Table 4**.

As with the prior sampling, CVOCs were not detected in any of the samples at concentrations in excess of residential or commercial indoor air vapor action levels (VALs) or sub-slab vapor risk screening levels (VRSLS).

Vapor Mitigation

November 2018

A vapor mitigation system (VMS) was installed in the source property building at 5619 22nd Avenue in November 2018 to address elevated CVOCs detected in the building sub-slab vapor samples (**Table 3**). The VMS was installed by Allis Environmental Services of West Allis, Wisconsin. It includes two pick-up points sealed through the building floor slab and plumbed together via PVC piping to a single Fantech Model Rn4EC-4 radon fan capable of producing up to 4.3 inches of water vacuum. The fan is mounted on the north exterior wall of the building with an exhaust line extending to the building roof. Fan operation is checked at a manometer installed on the northern pickup point. VMS sub-slab pressure field extension (PFE) is checked using five vacuum observation points installed through the floor slab. The building sump pit was sealed to prevent vapor migration and vacuum loss from the VMS. The VMS layout is shown on **Figure 2** and photos are included in **Appendix B**.

The VMS vacuum at startup, as measured on the system manometer on November 21, 2018, was 3.5 inches of water. Sub-slab PFE readings from five permanent and three temporary sub-slab vacuum observation points ranged from 0.008 to 0.791 inches of water, indicating good sub-slab PFE.

October 2019

SCS inspected the VMS on October 2, 2019 and found that the blower was operating and VMS monometer was reading a vacuum of 3.5 inches of water. Heavy rainfall had occurred late in the day on October 1, 2019. During the October 2nd inspection SCS observed that the basement floor was wet at several locations and water was present in one of the sub-slab PFE observation points. The owner, Mr. John Ekornaas, explained that water gets into the basement approximately 2 to 3 times each year after heavy rainfall events such as the one which occurred on October 1st.

Positive sub-slab vacuums were observed at three of the five sub-slab vacuum observation points and ranged from 0.001 to 0.285 inches of water. The positive readings were likely related to the rain infiltrating the sub-slab material under the building. Vacuum at a forth observation point could not be measured due to water in the point. A fifth vacuum observation point could not be located as it was covered by wood shelving or other materials, which had been placed over the observation point subsequent to the VMS installation.

SCS observed that an access port lid on the basement sump pit lid was missing. Mr. Ekornaas explained to SCS that the access port lid was removed recently in order to install a new sump pump. Mr. Ekornaas said that he would reinstall the lid or contact SCS if he needed assistance replacing it.

SCS plans to inspect the system again in January 2020. A VMS maintenance plan with additional details will be provided to Mr. Ekornaas and submitted to the Wisconsin Department of Natural Resources (WDNR) under separate cover.

SUMMARY AND CONCLUSIONS

- Repeated groundwater monitoring has shown consistent flow direction and the presence of PCE in groundwater at concentrations in excess of the ES. However, PCE appears to be stable and limited to the 5611 and 5619 22nd Avenue properties. A fourth round of groundwater monitoring is planned for January 2020 to further evaluate groundwater flow and contaminant concentrations.
- Repeated vapor intrusion assessment sampling for the neighboring Midnight Liquor & Bar and Pa's Pizzeria buildings has shown that CVOCs are not present in the sub-slab, indoor air, or outdoor air at concentrations in excess of VRSLs or VALs at either of the nearby buildings.
- Other than the source property building which has a vapor mitigation system, there do not appear to be any other buildings located within 100 feet north, south, or west of CVOC-contaminated soil or overlying groundwater with CVOCs in excess of ESs.
- There are buildings located within approximately 100 feet east of the CVOC-contaminated soil, however, given the vapor assessment findings for the above-noted nearby buildings, the groundwater flow direction (west), and the sanitary sewer flow direction (north along 22nd Avenue) it appears unlikely that buildings to the east would be affected by vapor intrusion. Therefore, no additional vapor assessment sampling is proposed.

- A VMS was installed at the source property building (5619 22nd Avenue) in November 2018 and appears to be operating as intended with occasional interruptions (approximately two to three times per year) when heavy rainfall temporarily saturates the underlying sub-slab material. Given the initial sub-slab PFE results and limited extent of VMS disruption it does not appear that modifications to the VMS would be necessary. SCS plans to evaluate the VMS again in January 2020.
- The degree and extent of contamination (soil, groundwater, vapor, and air) appears to have been adequately defined. SCS plans to submit an NR 716 Site Investigation Report (SIR) following the January 2020 groundwater sampling event.
- The SIR will include a recommended remedial action, which would likely be natural attenuation of groundwater and maintaining existing pavement and building foundation to prevent leaching of residual soil contamination. The VMS would also be maintained to prevent the potential for vapor intrusion into the source property building.

Please direct any questions concerning this letter and the above-noted case to Robert Langdon of SCS at (608) 216-7329 or rlangdon@scsengineers.com.

Sincerely,

Robert Langdon

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Comments

No additional comments.

Receipt

The samples were received on 10/4/2019 8:45 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 1.0° C.

GC/MS VOA

Method 8260B: The following samples were collected in a properly preserved vial; however, the pH was outside the required criteria when verified by the laboratory. The samples were analyzed outside the 7-day holding time specified for unpreserved samples but within the 14-day holding time specified for preserved samples: MW3 Dup (500-171208-1), MW2 (500-171208-2) and MW3 (500-171208-3).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
D	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	1.0
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

RE: Project: 25216186 Arctic Laundry & Clea
Pace Project No.: 10494511

Dear Rob Langdon:

Enclosed are the analytical results for sample(s) received by the laboratory on October 05, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kirsten Hogberg

QUALIFIERS

Project: 25216186 Arctic Laundry & Clea
Pace Project No.: 10494511

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor, percent moisture, initial weight and final volume.

LOQ - Limit of Quantitation adjusted for dilution factor, percent moisture, initial weight and final volume.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-M Pace Analytical Services - Minneapolis

RE: Project: Artic Laundry & Cleaners
Pace Project No.: 10494447

Dear Rob Langdon:

Enclosed are the analytical results for sample(s) received by the laboratory on October 04, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kirsten Hogberg

QUALIFIERS

Project: Artic Laundry & Cleaners
Pace Project No.: 10494447

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor, percent moisture, initial weight and final volume.

LOQ - Limit of Quantitation adjusted for dilution factor, percent moisture, initial weight and final volume.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-M Pace Analytical Services - Minneapolis

Values were not rounded according to EPA rounding rules. THC is quantitated based on the average response factors of several compounds; the nominal molecular weight of THC used for units conversion is the average of the molecular weights of the compounds used for quantitation.

ANALYTICAL RESULTS

Client: SCS Engineers
 Phone: 843.746.8525

Lab Project Number: 10494447
 Project Name: Artic Laundry & Cleaners

Lab Sample No:	10494447004	ProjSampleNum:	10494447004	Date Collected:	10/02/19 11:13
Client Sample ID:	5605 Outdoor	Matrix:	Air	Date Received:	10/04/19 12:00

Parameters	Results	Units	Report Limit	MDL	Analyzed	CAS No.	Ftnote
Air							
TO-15							
cis-1,2-Dichloroethene	<0.069	ppbv	0.25	0.069	10/12/19 0:55 MJL	156-59-2	
Tetrachloroethene	<0.059	ppbv	0.13	0.059	10/12/19 0:55 MJL	127-18-4	
trans-1,2-Dichloroethene	<0.092	ppbv	0.25	0.092	10/12/19 0:55 MJL	156-60-5	
Trichloroethene	<0.06	ppbv	0.13	0.06	10/12/19 0:55 MJL	79-01-6	
Vinyl chloride	<0.062	ppbv	0.13	0.062	10/12/19 0:55 MJL	75-01-4	

DISCLAIMER: These results have been converted to the units shown from the original units of measurement assuming 20 degrees Celsius and 1 atmosphere pressure. Values were not rounded according to EPA rounding rules. THC is quantitated based on the average response factors of several compounds; the nominal molecular weight of THC used for units conversion is the average of the molecular weights of the compounds used for quantitation.
