Subject: Nep's Bar – Letter Report

Dear Ms. Stoltz,

Enclosed is the Letter Report for the Nep's Bar site located at 23885 County Hwy G in Ashland, Wisconsin. **This completes the Public Bidding Deferred workscope approved on September 29, 2015.**

Vapor Sampling Worksope

On April 12-13, 2016, Braun Intertec of La Crosse, WI collected one indoor air sample (V-1) from the basement of the residence located at 23885 County Hwy G. The air sample was collected using a Suma canister with a flow regulator that allowed the air sample to be collected over a 24 hour period for VOC (TO-15) analysis.

On April 13, 2016, Braun Intertec installed three sub-slab vapor sampling ports (V-2, V-3, V-4) in the basement of residence 23885 County Hwy G. The sub-slab vapor sampling port was constructed by drilling a ½-inch pilot hole through the concrete slab and several inches into the sub slab material with a hammer drill. A 1½-inch outer hole is then drilled to depths ranging from ¾ -inch to 1-inch, depending on the concrete slab thickness. The hole was cleaned of dust and drilling debris using a shop-vac. A stainless steel vapor pin is installed in the inner hole with a silicon sleeve to obtain an air tight seal with the concrete floor. The remainder of the hole is sealed with hydrated bentonite and a water dam test was conducted to confirm that the seal is air tight.

On April 13, 2016, Braun Intertec collected three vapor samples from the sub-slab sampling ports (V-2, V-3, V-4) for VOC (TO-15) analysis. Vapor samples were collected by using a short length of Teflon tubing to connect the sampling port and a 6-liter Suma canister. The air samples were collected using a Suma canister with a flow regulator that allowed the sub-slab vapor sample to be collected over a 30 minute period. Prior to collecting the sub-slab vapor samples, a shut in test was conducted to assure that the fittings between the sample probe and sampling container are air tight. No leaks were detected. The sub-slab soil vapor sampling results are summarized in the attached data table.

Drilling Project

On April 13, 2016, Range Environmental Drilling of Hibbing, MN conducted a drilling project under the supervision of METCO personnel. During the drilling project, three monitoring wells (MW-6, MW-7, MW-8) were installed to 20 feet bgs. Fifteen soil samples were collected during the drilling project for field (PID) and/or laboratory analysis (GRO, PVOC, Naphthalene, and +1,2-DCA). The monitoring wells were not developed, as they were dry following installation.

Groundwater Monitoring Workscope

On May 31, 2016, METCO personnel collected groundwater samples from eight monitoring wells (MW-1, MW-2, MW-3, MW-4, MW-5, MW-6, MW-7, and MW-8,) for VOC (MW-6, MW-7, and MW-8) or PVOC, Naphthalene, and +1,2-DCA analysis (MW-1, MW-2, MW-3, MW-4 and MW-5). A water sample was also collected from the on-site potable well (23885 PW) for VOC analysis. Water level, dissolved oxygen, pH, ORP, specific conductance, and temperature measurements were collected from all sampled wells.

On August 30, 2016, METCO personnel collected groundwater samples from eight monitoring wells (MW-1, MW-2, MW-3, MW-4, MW-5, MW-6, MW-7, and MW-8) for PVOC, Naphthalene, and +1,2-DCA analysis. A water sample was also collected from the on-site potable well (23885 PW) for VOC analysis. Water level, dissolved oxygen, pH, ORP, specific conductance, and temperature measurements were collected from all sampled wells. During the sampling event, METCO personnel properly surveyed the new monitoring wells (MW-6, MW-7, and MW-8) to feet mean sea level (MSL).

Discussion of Results:

Discussion of Vapor Results:

Indoor Air Sample V-1: Currently shows a Residential Indoor Air Vapor Action Level (VAL) exceedance for Naphthalene (2.9 ug/m^3). This may likely be due to the presence of the two home heating oil tanks located in the basement.

Sub-Slab Vapor Sample V-2: Currently shows a Residential Indoor Air Vapor Action Levels (VAL) exceedance for Naphthalene (67.4 ug/m^3).

Sub-Slab Vapor Sample V-3: Showed no exceedances for the Residential Sub-Slab Vapor Action Levels (VAL).

Sub-Slab Vapor Sample V-4: Showed no exceedances for the Residential Sub-Slab Vapor Action Levels (VAL).

Discussion of Soil Results:

Soil Sample MW-7-5: Showed no detects for GRO, PVOC, Naphthalene+1,2-DCA.

Soil Sample MW-8-5: Showed no detects for GRO, PVOC, or Naphthalene+1,2-DCA.

Discussion of Groundwater Results:

Monitoring Well MW-1: Currently shows NR140 Enforcement Standard (ES) exceedances for Benzene (18,600 ppb), 1,2-Dichloroethane (DCA) (330 ppb), Ethylbenzene (1,840 ppb), Naphthalene (490 ppb), Toluene (22,300 ppb), Trimethylbenzenes (2,530 ppb), and Xylene (12,300 ppb).

Monitoring Well MW-2: Currently shows an ES exceedance for Benzene (35 ppb) as well as a NR140 Preventative Action Limit (PAL) exceedance for Naphthalene (18.5 ppb).

Monitoring Well MW-3: Currently shows an ES exceedance for Benzene (172 ppb).

Monitoring Well MW-4: Currently shows no detects for PVOC, Naphthalene, and +1,2-DCA analysis.

Monitoring Well MW-5: Currently shows no detects for PVOC, Naphthalene, and +1,2-DCA analysis.

Monitoring Well MW-6: Currently shows no detects for PVOC, Naphthalene, and +1,2-DCA analysis.

Monitoring Well MW-7: Currently shows a PAL exceedance for Benzene (0.57 ppb).

Monitoring Well MW-8: Currently shows no detects for PVOC, Naphthalene, and +1,2-DCA analysis.

Private Well 23885 Cty Hwy G: Currently shows no detects for VOC's .

Conclusions/Recommendations

Due to the Direct Contact exceedances in borings G-1-1, G-4-1, G-5-1, and G-6-1 and elevated contaminant levels in MW-1, the WDNR will likely require an excavation/disposal project to reduce the contaminant mass (see the attached Proposed Excavation Area Map). Following the excavation project, a replacement well (MW-1R) would be required along with post excavation groundwater monitoring to assess post excavation contaminant trends.

However, if a remedial excavation project is conducted, it should be noted that large cracks were noted in the foundation blocks on the north wall of the basement of the Nep's Bar building. Excavation of the soils immediately adjacent to the north wall of the basement should be avoided and a suitable backfill (with fines) should be used to prevent flooding issues to the basement.

It should also be noted that the Indoor Air Sample (V-1) and Sub-Slab Vapor Sample (V-2) exceeded Vapor Action Levels for Naphthalene, however the indoor sample may likely be due to the presence of two heating oil tanks located in the basement. Permanent sub-slab vapor monitoring points were installed, if additional vapor sampling is required.

Per WDNR response, METCO will proceed with the project.

A Detailed Site Map, Groundwater Flow Maps (2), Soil Contamination Map, Groundwater Contamination Map, Proposed Excavation Area Map, Data Tables, Drilling Documents, Vapor Documents, and Laboratory Documents have been attached.

If you have any questions or comments please feel free to call (608-781-8879) or email at jasonp@metcohq.com.

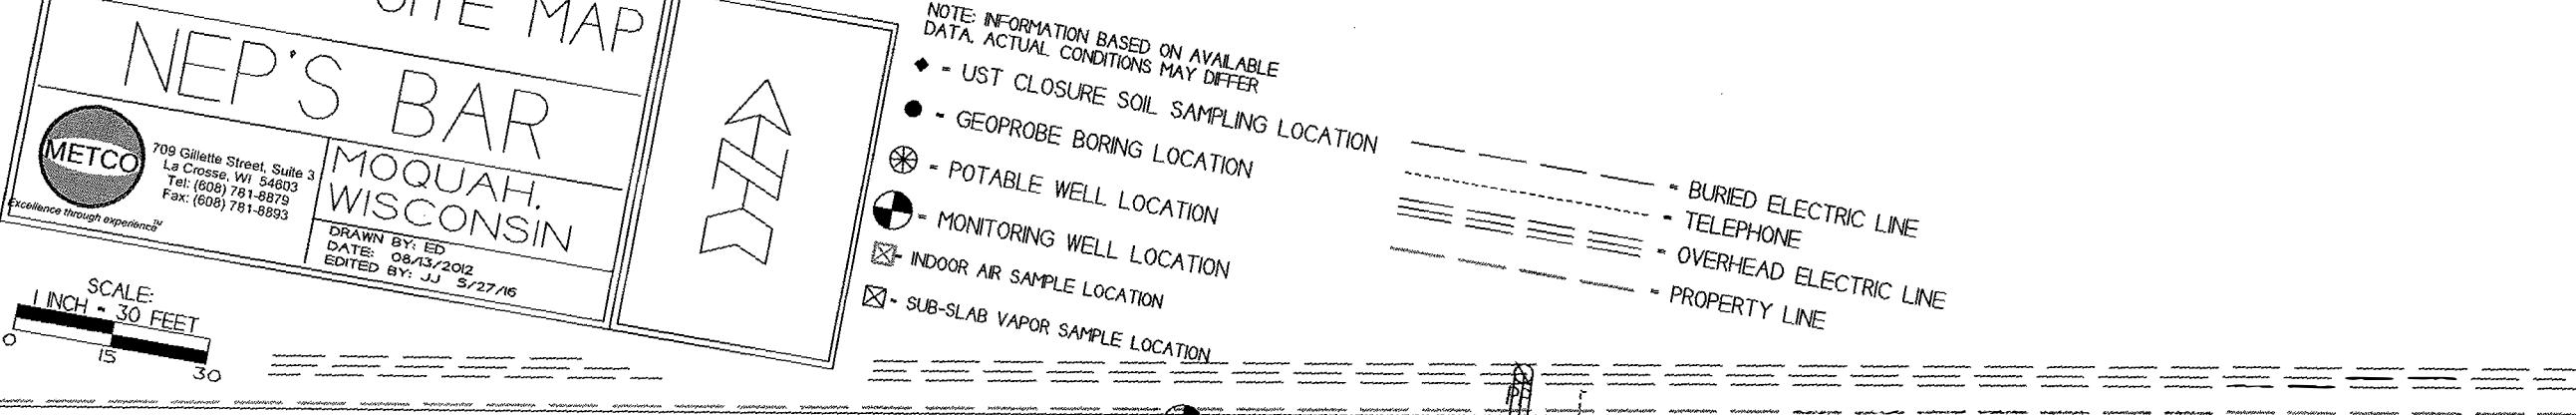

Sincerely,

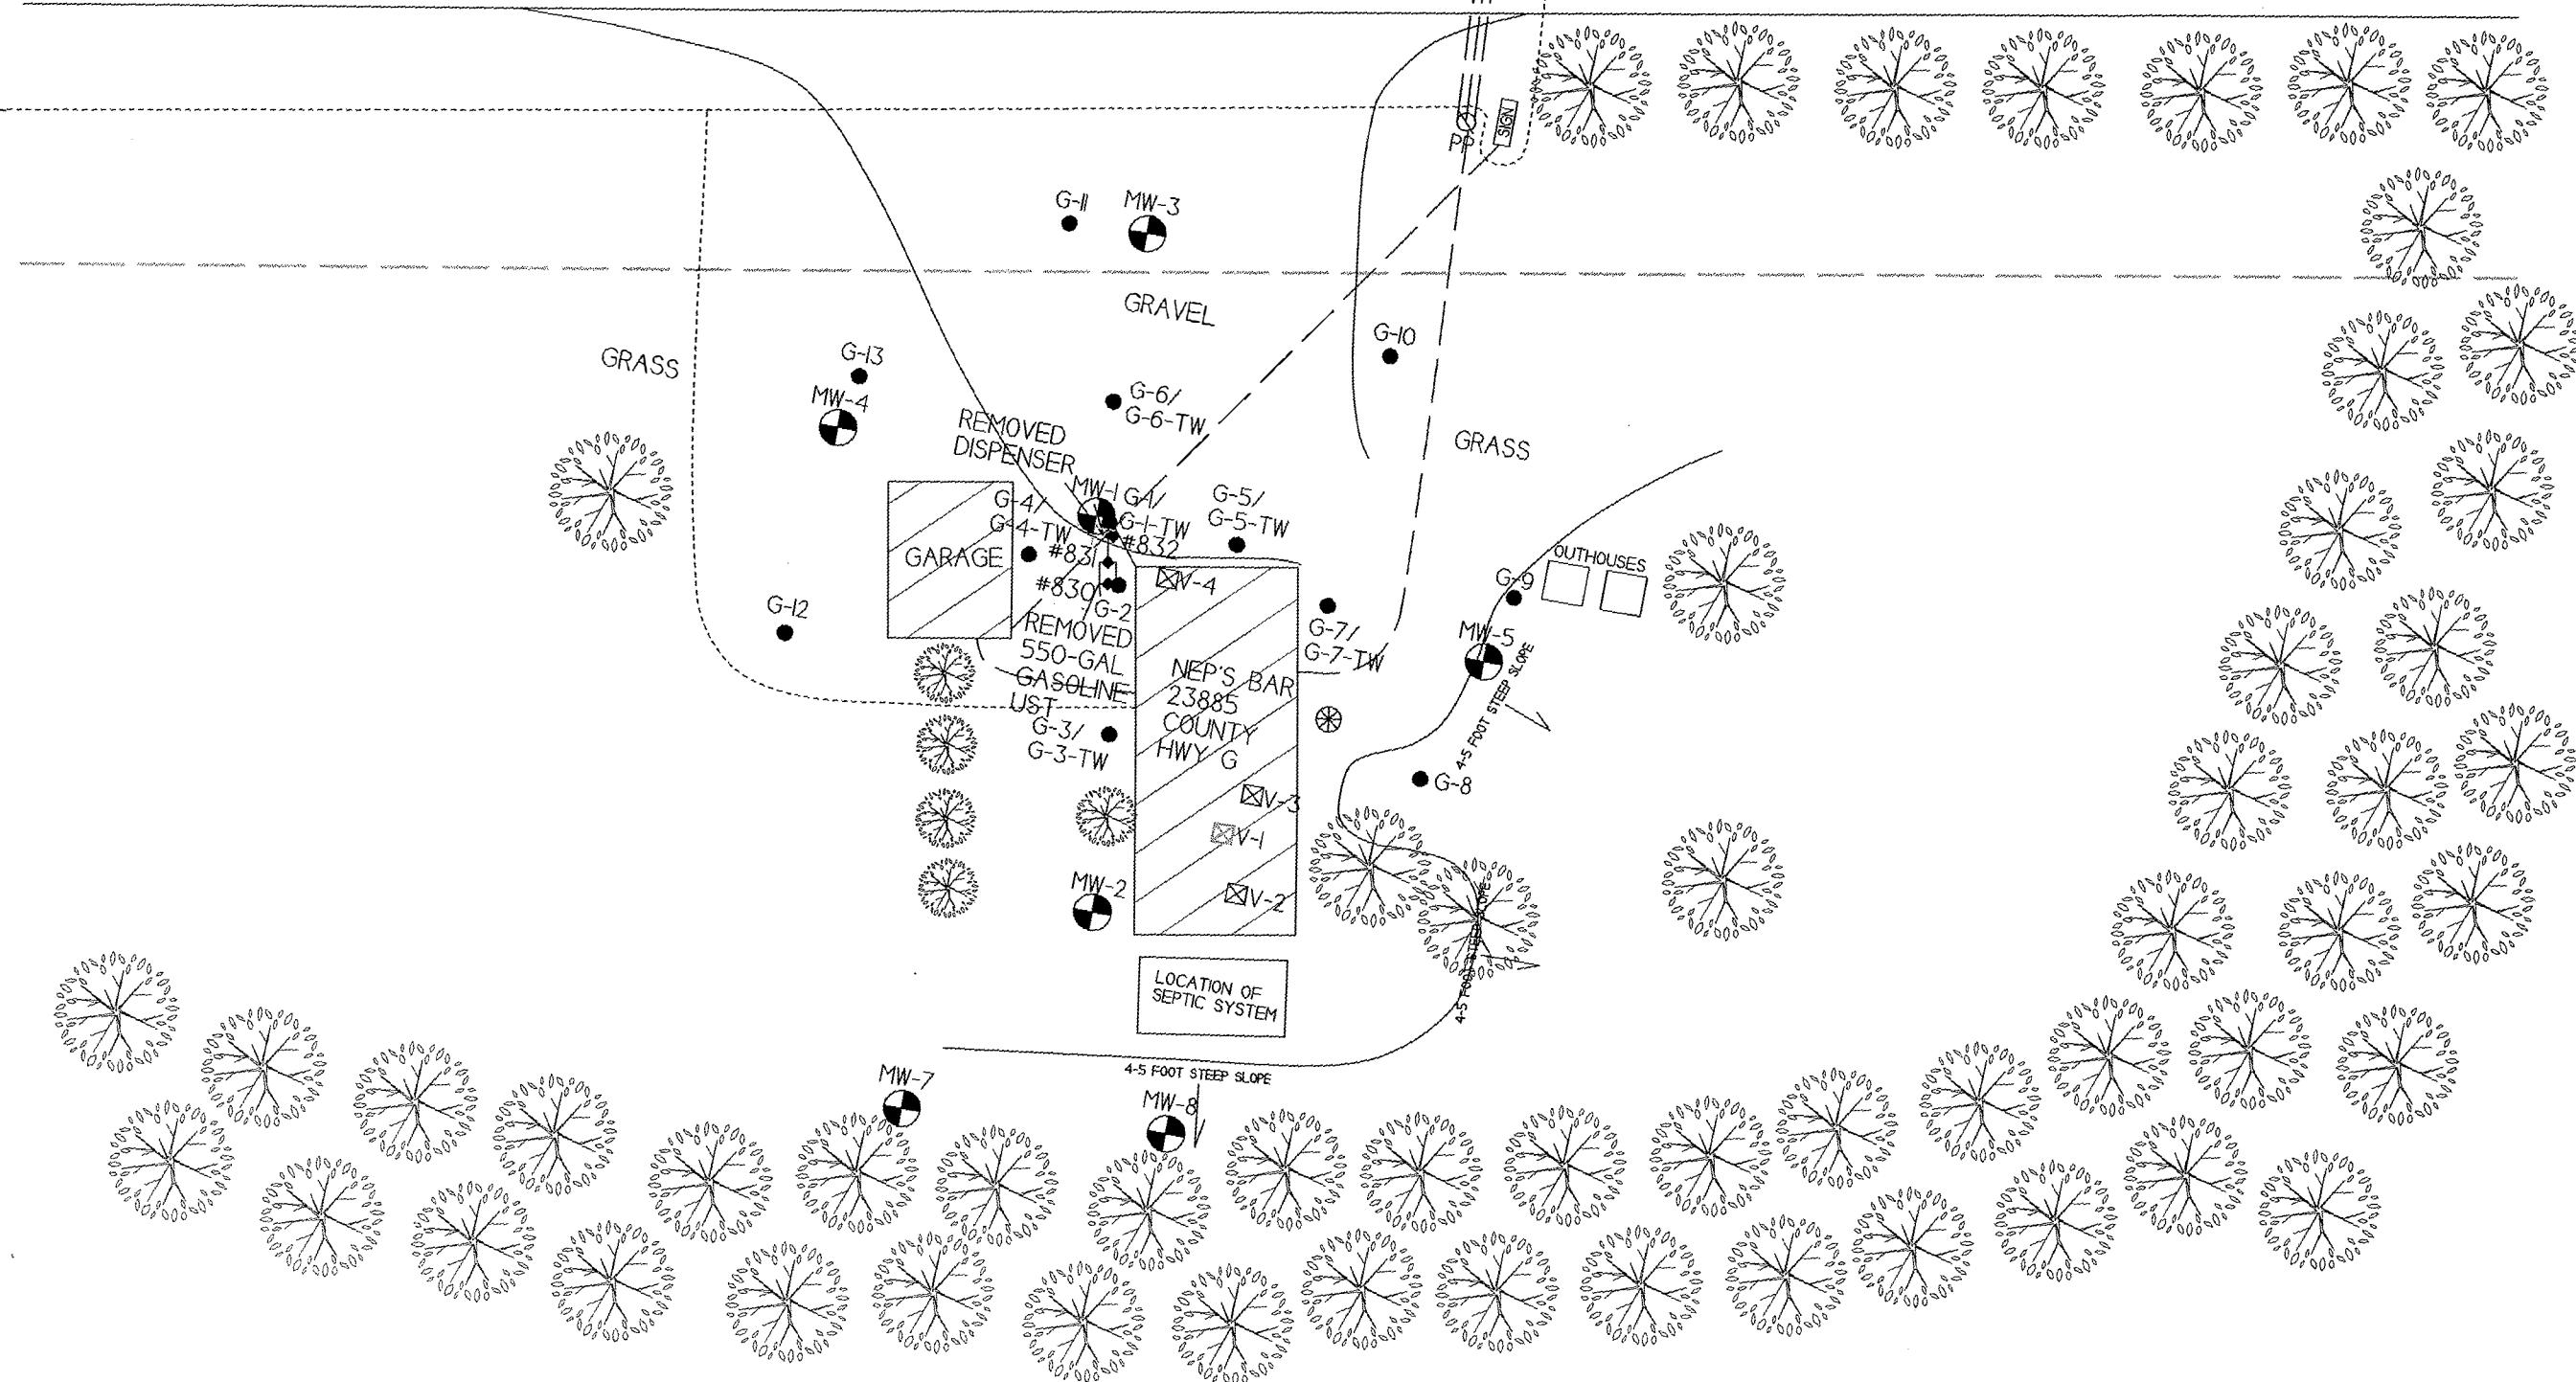

Jason T. Powell
Staff Scientist

RE: Project: B1602930 Nep's Bar
Pace Project No.: 10344742

Dear Kevin Nestingen:

Enclosed are the analytical results for sample(s) received by the laboratory on April 14, 2016. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

A handwritten signature in black ink, appearing to read "Nathan Boberg".

PROJECT NARRATIVE

Project: B1602930 Nep's Bar

Pace Project No.: 10344742

Method: TO-15

Description: TO15 MSVAIR (TICS)

Client: Braun-Air

Date: April 21, 2016

General Information:

4 samples were analyzed for TO-15. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:

The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):

All criteria were within method requirements with any exceptions noted below.

QC Batch: AIR/25711

SS: This analyte did not meet the secondary source verification criteria for the initial calibration. The reported result should be considered an estimated value.

- BLANK (Lab ID: 2233747)
 - Propylene
- LCS (Lab ID: 2233748)
 - Propylene
- V-1 (Lab ID: 10344742001)
 - Propylene
- V-2 (Lab ID: 10344742002)
 - Propylene
- V-3 (Lab ID: 10344742003)
 - Propylene
- V-4 (Lab ID: 10344742004)
 - Propylene

Continuing Calibration:

All criteria were within method requirements with any exceptions noted below.

Internal Standards:

All internal standards were within QC limits with any exceptions noted below.

Method Blank:

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:

All laboratory control spike compounds were within QC limits with any exceptions noted below.

Additional Comments:

This data package has been reviewed for quality and completeness and is approved for release.

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,

without the written consent of Pace Analytical Services, Inc..

QUALIFIERS

Project: B1602930 Nep's Bar

Pace Project No.: 10344742

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor and percent moisture.

LOQ - Limit of Quantitation adjusted for dilution factor and percent moisture.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

N Tentatively identified compound (TIC) based on mass spectral library search. Result is estimated.

SS This analyte did not meet the secondary source verification criteria for the initial calibration. The reported result should be considered an estimated value.

"J" Flag: Analyte detected between LOD and LOQ

LOD Limit of Detection

LOQ Limit of Quantitation

Code *Comment*

1 Laboratory QC within limits.

All solid sample results reported on a dry weight basis unless otherwise indicated. All LOD's and LOQ's are adjusted for dilutions but not dry weight. Subcontracted results are denoted by SUB in the analyst field.

"J" Flag: Analyte detected between LOD and LOQ

LOD Limit of Detection

LOQ Limit of Quantitation

Code **Comment**

1 Laboratory QC within limits.

All solid sample results reported on a dry weight basis unless otherwise indicated. All LOD's and LOQ's are adjusted for dilutions but not dry weight. Subcontracted results are denoted by SUB in the analyst field.
