**Re: Supplement Site Investigation to Assess Vapor Plume
Former Dry Cleaner Building
Arcadia State Bank
127 Main Street
Arcadia, Wisconsin, 54612
WDNR BRRTS Nos. 02-62-259051**

Dear Ms. Sylora:

Aptim Environmental and Infrastructure (APTIM), on the behalf of State Bank of Arcadia, is presenting this Supplement Site Investigation Report for the former dry cleaner building located at the above referenced address (**Figure B.1.a**). On June 12, 2019, the Wisconsin Department of Natural Resources (WDNR) approved Change Order #6 to assess the vapor plume at the former dry cleaner building and adjacent structures. The site activities including indoor vapor sampling, crawl space and basement vapor sampling, sump sampling and reporting as outlined in the approved proposal dated June 7, 2019.

The supplemental investigation was conducted is in response to the WDNR letter dated August 9, 2018 addressed to Kevin Manley stating that the data provided in the Interim Remedial Action Plan Report to the WDNR, sent December 28, 2015, identified impacted vapors; however, the data was more than 3 years old and did not achieve the definition of extent and magnitude for vapor intrusion. The WDNR recommended that a sub-slab and soil-gas investigation be completed to define the extent and magnitude for the above referenced site and other potential receptors. Data obtained during this investigation will used to assess the vapor plume and possible mitigation.

The following field activities were completed during cooling (March 2020) and heating (August 2020) seasons:

- Collected indoor air and ambient air samples from the first floor of the Tricor Insurance (formerly Westland Insurance), La Tapatia Restaurant, and Chasteen Insurance (former Barber Shop) buildings to assess the vapor intrusion pathway. Unable to gain access to the Bawek's Shoes building.
- Collected indoor air samples from the crawl space and/or basement of the Tricor Insurance and La Tapatia Restaurant buildings to assess the vapor intrusion pathway. These buildings were constructed with a crawl space and earthen floor that were submerged at the time of inspections

due to naturally high water table; therefore, indoor air samples were collected in lieu of sub-slab samples.

- Collected soil vapor samples on the northwest side of the Tricor Insurance building to assess residual chlorinated volatile organic compounds (CVOCs) in the shallow soils.
- Collected the water samples from the sumps located in the crawl spaces of the Tricor Insurance and La Tapatia Restaurant buildings.
- Collected soil samples from five soil borings located along the west and north sides of the Tricor Insurance building to assess vapor migration in these areas. Soil vapor samples were collected only during the March 2020 field activities.

All indoor vapor, crawl space, and sump samples were collected during the cooling and heating seasons. The cool season samples were collected on March 2 and 3, 2020. During the March 2020 sampling event, the weather was in the low 30's, Partly cloudy with light snow on the ground. The warm season samples were collected on August 6, 2020. During the August 2020 sampling event, the weather was in the 70's and partly cloudy. The sample locations for the completed field activities are illustrated in **Figure B.4.a**. Documentation of the field activities are provided in **Attachment A**.

Indoor Air Vapor Sampling Activities

On March 2, 2010 and August 6, 2020, indoor air and crawl space samples were collected at the Tricor Insurance, La Tapatia Restaurant, and Chasteen Insurance (former Barber Shop) buildings to evaluate the potential for vapor intrusion. In addition, one ambient air sample was collected during each event on the west side of the Tricor Insurance to establish background. Vapor samples were collected in 6-liter summa canisters that draw air into the canister under the influence of the canister's vacuum. Each canister was fitted with a flow controller that provides an 8-hour time-weighted average concentration. The data tables for the indoor air and the crawl space vapor samples were updated to compare the results to the November 2017 United States Environmental Protection Agency (USEPA) Regional Screening Level Tables. The vapor sample locations are illustrated in **Figure B.4.a**.

The CVOCs concentrations in the indoor air samples collected from the first floor of these buildings were below the Wisconsin Vapor Action Levels (VALs) commercial Target Indoor Air screening levels. Tetrachlorethene (PCE) concentrations in the La Tapatia Restaurant crawl space sample collected on August 6, 2020 (warming season) exceeded the commercial VALs Target Indoor Air screening level of $180 \mu\text{g}/\text{m}^3$, but was below the sub-slab commercial Target Soil Gas concentration of $6,000 \mu\text{g}/\text{m}^3$. All other detected VOC concentrations were below their respective commercial Target Soil Gas screening levels.

The indoor air, crawl space and basement vapor analytical data are summarized in **Table A.4.a**.

Sump Sampling Activities

On March 2, 2010 and August 6, 2020, the crawl space/basement located beneath the Tricor Insurance and La Tapatia Restaurant were inspected for the collection of soil gas samples. Saturated soils and standing water were observed in the crawl space/basements during both sampling events. Water samples

were collected from the sumps beneath the target buildings where sufficient volumes were present. On August 8, 2020, an insufficient quantity of water was present in the crawl space beneath the La Tapatia Restaurant to collect a water sample. The sump samples were collected in the same vicinity as the crawlspace samples illustrated in **Figure B.4.a.**

The water samples from each crawl space/basement sumps were collected into laboratory supplied jars for VOC analysis by EPA Method 8260 by Pace Analytical of Green Bay, Wisconsin. The water data from the crawl space/basement sampling are presented on **Table A.1**. The laboratory analytical report is provided in **Attachment B**.

During the March 2, 2020 sampling event, all of the target CVOCs were below their respective analytical detection limits in the water sample collected from the sump beneath the Tricor Insurance building. Concentrations of PCE (58.7 µg/L) exceeded the USEPA MCL of 5 µg/L in the water sample collected from the crawl space beneath the La Tapatia Restaurant. All other concentrations of CVOC were below their respective EPA MCLs.

During the August 6, 2020 sampling event, all of the target CVOCs were below their respective analytical detection limits in the water sample collected from the sump beneath the Tricor Insurance building. An insufficient volume of water was present in the crawl space beneath the La Tapatia Restaurant to collect a water sample.

The sump and crawl space water analytical data are summarized in **Table A.4.a.**

Soils Vapor Data Activities

On March 3, 2020, soil samples were collected from the interval near the groundwater interface at five locations adjacent to the west side of the Tricor Insurance building. The depth to groundwater was measured at 3.44 feet below top of casing at MW-24. Soil gas probes were installed to approximately 4 feet bgs for soil gas collection. Soil gas samples were collected in 6-liter summa canisters that draw air into the canister under the influence of the canister's vacuum. Each canister was fitted with a flow controller that provides an 30-minute time-weighted average concentration. The locations of the soil gas sampling points and the site layout are illustrated in **Figure B.1.b.**

All CVOCs concentrations were below their respective Wisconsin VALs commercial Target Indoor Air screening levels. The soil sample analytical data are summarized in **Table A.4.b.**

Summary

The results of the vapor assessment that was conducted in the Tricor Insurance building and adjacent buildings to include the La Tapatia Restaurant and Chasteen Insurance (former Barber Shop) buildings indicated that the underlying impact groundwater does not pose an exposure risk exceeding the Wisconsin VALs commercial Target Indoor Air screening levels to occupants in the respective buildings. The only exceedance that was detected was in the crawl space of the La Tapatia Restaurant. PCE was detected in the air vapor (223 µg/m³) and sump water (58.7 µg/L) at concentrations that exceeded the Wisconsin VALs commercial Target Indoor Air screening level of 180 µg/m³ and the USEPA MCL for groundwater of 5 µg/L. The maximum PCE concentration detected in the indoor air sample collected at the La Tapatia

Restaurant was 13.9 $\mu\text{g}/\text{m}^3$ which was below the Wisconsin VALs commercial Target Indoor Air screening levels for air vapor. All other target CVOCs were either below the laboratory analytical detection limits or below their respective Wisconsin VALs commercial Target Indoor Air screening levels for air vapor or USEPA MCL for groundwater.

All CVOCs concentrations in the soil gas in the area adjacent to the west and north side of the Westland Insurance building were below the Wisconsin VALs commercial Target Indoor Air screening levels.

Closing

Based on the findings of this vapor investigation, an indoor vapor mitigation system is not recommended for the Tricor Insurance, La Tapatia Restaurant, or Chasteen Insurance (former Barber Shop) buildings.

If you have any questions, please contact me at (913) 317-3591.

Sincerely,

Mark Finney

RE: Project: 631009876 Arcadia
Pace Project No.: 10510681

Dear Mark Finney:

Enclosed are the analytical results for sample(s) received by the laboratory on March 05, 2020. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kirsten Hogberg

PROJECT NARRATIVE

Project: 631009876 Arcadia
Pace Project No.: 10510681

Method: TO-15

Description: TO15 MSV AIR

Client: APTIM Environmental Services

Date: March 12, 2020

General Information:

5 samples were analyzed for TO-15. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:

The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):

All criteria were within method requirements with any exceptions noted below.

QC Batch: 664431

SS: This analyte did not meet the secondary source verification criteria for the initial calibration. The reported result should be considered an estimated value.

- LCS (Lab ID: 3564164)
- 1,2,4-Trichlorobenzene

Continuing Calibration:

All criteria were within method requirements with any exceptions noted below.

Internal Standards:

All internal standards were within QC limits with any exceptions noted below.

Method Blank:

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:

All laboratory control spike compounds were within QC limits with any exceptions noted below.

Duplicate Sample:

All duplicate sample results were within method acceptance criteria with any exceptions noted below.

Additional Comments:

This data package has been reviewed for quality and completeness and is approved for release.

QUALIFIERS

Project: 631009876 Arcadia
Pace Project No.: 10510681

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor, percent moisture, initial weight and final volume.

LOQ - Limit of Quantitation adjusted for dilution factor, percent moisture, initial weight and final volume.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

MN The reporting limit has been raised in accordance with Minnesota Statutes 4740.2100 Subpart 8. C, D. Reporting Limit Evaluation Rule.

SS This analyte did not meet the secondary source verification criteria for the initial calibration. The reported result should be considered an estimated value.

RE: Project: 631009876 Arcadia
Pace Project No.: 10510703

Dear Mark Finney:

Enclosed are the analytical results for sample(s) received by the laboratory on March 05, 2020. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kirsten Hogberg

PROJECT NARRATIVE

Project: 631009876 Arcadia
Pace Project No.: 10510703

Method: TO-15

Description: TO15 MSV AIR

Client: APTIM Environmental Services

Date: March 12, 2020

General Information:

7 samples were analyzed for TO-15. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:

The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):

All criteria were within method requirements with any exceptions noted below.

QC Batch: 664431

SS: This analyte did not meet the secondary source verification criteria for the initial calibration. The reported result should be considered an estimated value.

- LCS (Lab ID: 3564164)
- 1,2,4-Trichlorobenzene

Continuing Calibration:

All criteria were within method requirements with any exceptions noted below.

Internal Standards:

All internal standards were within QC limits with any exceptions noted below.

Method Blank:

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:

All laboratory control spike compounds were within QC limits with any exceptions noted below.

Duplicate Sample:

All duplicate sample results were within method acceptance criteria with any exceptions noted below.

Additional Comments:

This data package has been reviewed for quality and completeness and is approved for release.

QUALIFIERS

Project: 631009876 Arcadia
Pace Project No.: 10510703

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor, percent moisture, initial weight and final volume.

LOQ - Limit of Quantitation adjusted for dilution factor, percent moisture, initial weight and final volume.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

MN The reporting limit has been raised in accordance with Minnesota Statutes 4740.2100 Subpart 8. C, D. Reporting Limit Evaluation Rule.

SS This analyte did not meet the secondary source verification criteria for the initial calibration. The reported result should be considered an estimated value.

RE: Project: 631009876 Arcadia
Pace Project No.: 10527827

Dear Mark Finney:

Enclosed are the analytical results for sample(s) received by the laboratory on August 10, 2020. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Minneapolis

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kirsten Hogberg
kirsten.hogberg@pacelabs.com

Lenexa, KS 66215

RE: Project: 631009876 ARCADIA
Pace Project No.: 40212567

Dear Mark Finney:

Enclosed are the analytical results for sample(s) received by the laboratory on August 07, 2020. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Green Bay

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Christopher Hyska

QUALIFIERS

Project: 631009876 ARCADIA

Pace Project No.: 40212567

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor, percent moisture, initial weight and final volume.

LOQ - Limit of Quantitation adjusted for dilution factor, percent moisture, initial weight and final volume.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

PROJECT NARRATIVE

Project: 631009876 Arcadia
Pace Project No.: 10527827

Method: TO-15

Description: TO15 MSV AIR

Client: APTIM Environmental Services

Date: August 21, 2020

General Information:

7 samples were analyzed for TO-15 by Pace Analytical Services Minneapolis. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:

The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):

All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:

All criteria were within method requirements with any exceptions noted below.

Internal Standards:

All internal standards were within QC limits with any exceptions noted below.

Method Blank:

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:

All laboratory control spike compounds were within QC limits with any exceptions noted below.

Duplicate Sample:

All duplicate sample results were within method acceptance criteria with any exceptions noted below.

Additional Comments:

This data package has been reviewed for quality and completeness and is approved for release.

QUALIFIERS

Project: 631009876 Arcadia
Pace Project No.: 10527827

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor, percent moisture, initial weight and final volume.

LOQ - Limit of Quantitation adjusted for dilution factor, percent moisture, initial weight and final volume.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.
