WISCONSIN ADMINISTRATIVE CODE CHAPTER NR712 CERTIFICATIONS

The recommendations contained in this report are based on the information obtained from our study of the site and were arrived at in accordance with accepted hydrogeologic and engineering practices at this time and location.

"I, Matthew C. Michalski, hereby certify that I am a hydrogeologist as that term is defined in s. NR 712.03 (1), Wis. Adm. Code, am registered in accordance with the requirements of ch. GHSS 2, Wis. Adm. Code, or licensed in accordance with the requirements of ch. GHSS 3, Wis. Adm. Code, and that, to the best of my knowledge, all of the information contained in this document is correct and the document was prepared in compliance with all applicable requirements in chs. NR 700 to 726, Wis. Adm. Code."

Matthew C. Michalski

REI PROJECT #10288

1.0 INTRODUCTION

On June 12, 1996 and January 17, 2008, the Wisconsin Department of Natural Resources (WDNR) issued a “Responsible Party” (RP) Letter for contamination identified at the former drycleaner property located at 127 Main Street, Arcadia, Wisconsin. The WDNR RP letter notified the State Bank of Acadia that it is responsible for investigating the extent and degree of contamination and for restoring the environment if it is determined to be the source of contamination.

An Initial Site Assessment was conducted in September 2008 by Shaw Environmental, Inc. (Shaw) which revealed concentrations of chlorinated volatile organic compounds (CVOCs) above the NR 140 Preventative Action Limit (PAL) and Enforcement Standard (ES) in groundwater samples collected from the property. Soil concentrations of CVOCs from samples collected from the property exceeded Migration to Groundwater Residual Contaminant Levels (RCLs). Additional site investigations and groundwater sampling events were conducted by Shaw, CB&I, and Aptim Environmental & Infrastructure Inc. (Aptim) from 2008 through 2020.

REI was retained by The State Bank of Acadia to conduct additional soil gas and vapor monitoring at the property and adjacent properties. This report serves to notify the WDNR a qualified consultant has been retained and summarize REI’s proposed scope of work to move this site towards the completion of site investigation.

2.0 BACKGROUND INFORMATION AND SCOPE OF WORK

2.1 Responsible Party

First National Bank & Trust Company (formerly State Bank of Acadia)

Attn: Mr. Kevin Manley

131 West Main Street

Arcadia, WI 54612

2.2 Environmental Consulting Firm

REI Engineering, Inc.

Public Land Survey System:

The Northeast Quarter (NE $\frac{1}{4}$) of the Southwest Quarter (SW $\frac{1}{4}$) of Section Thirty-two (32), Township Twenty-one North (21N), Range Nine West (90W), Trempealeau County, Wisconsin.

WTM Coordinates:

Easting: 400,211

Northing: 420,990

Latitude & Longitude (WGS84):

Latitude: 44° 15' 8.26" N

Longitude: 91° 30' 1.72"W

The site location is depicted in Figure 1.

2.5 Site Background

2.5.1 Current & Historic Land Use

The current land use of the property is a commercial office space for an insurance agency. The property was historically used by a dry-cleaning business.

2.5.2 Previous Releases/Investigations

No other releases other than the one associated with BRRTS# 02-62-259051 are known to be associated with the subject property.

2.6 Scope of Work

REI proposes to conduct vapor sampling to further investigate the magnitude and extent of vapor impacts to the property and adjacent properties. The proposed vapor sampling scope of work is described below.

1. REI will obtain landowner agreements in order to gain permission to access the properties for sampling purposes.
2. REI proposes to install a sub-slab vapor point in the building located at 119 West Main Street, currently occupied by Bawek's Shoes. A sub-slab vapor point

has not been installed in this location and previous ambient air samples collected from within the building appeared to have elevated concentrations of contaminants of concern due to the use of solvents and glues in the building.

3. REI will collect up to seven (7) vapor samples for analysis of VOCs by EPA Method TO-15. The proposed vapor sample locations are as follows:

- 125 West Main Street, Crawlspace
- 125 West Main Street, First Floor
- 127 West Main Street, Basement/Sump
- 127 West Main Street, Sewer Gas
- 131 West Main Street, Vapor Point SSG-1
- 144 Cleveland Street, Vapor Point SSG-2
- 119 West Main Street, Proposed Vapor Point

4. The structure located at 127 West Main Street is reported to have an air exchange unit located in the crawl space to remove humidity. Samples collected from the crawl space previously were collected after the air exchange unit was shut down at least 24 hours in advance. REI plans to collect the sample from the crawl space with the air exchange operating to determine if the system is a viable vapor mitigation system.

5. Collected vapor samples will be submitted to a state certified laboratory for analysis of VOCs by EPA Method TO-15.

6. The structures located at 127 West Main Street and 125 West Main Street both have been reported to have free standing water located in the crawlspaces. The structure located at 127 West Main Street is also reported to have a sump pit. REI personnel will collect water samples from any sumps or any free standing water located in the crawlspaces of all structures where vapor samples are being collected.

7. Collected water samples will be submitted to a state certified laboratory for analysis of VOCs by EPA Method 8260.

8. REI will evaluate the potential for vapor intrusion based on criteria from WDNR Publication RR-800 Addressing Vapor Intrusion at Remediation and Redevelopment Sites in Wisconsin. REI will prepare a summary report detailing sampling methodology, sample locations, analytical results, and site map showing significant results.

The current site layout and sample locations are depicted in Figure 2. Soil analytical results for the subject property and down gradient closed LUST site are summarized in Tables 1a-h. Groundwater analytical results for the subject property and down gradient closed LUST site are summarized in Tables 2a-ac. Groundwater elevation and depth measurements are summarized in Tables 3a-c. Vapor analytical results are summarized in Tables 4a-e.

3.0 METHODOLOGIES

3.1 Vapor Analysis

REI will investigate the potential for vapor intrusion at this site to determine if vapor intrusion sampling is necessary.

3.1.1 Vapor Pin Sample Collection

Interior sub-slab vapor samples are collected via the installation of a stainless-steel VAPOR PIN[®] (Part# VPIN0522SS). The probe will be installed following the manufacturer Standard Operating Procedure Installation and Extraction of the VAPOR PIN[®] (March 16, 2018) and Use of the VAPOR PIN[®] Drilling Guide and Secure Cover (March 16, 2018). After installation, the sub-slab vapors will be allowed to equilibrate prior to sampling by allowing the probe to “rest” for a period of one (1) to two (2) hours or by purging the sub-slab probe and screening the sub-slab vapors until field meter reading are stable.

Leak tests to verify the tightness of the sampling train and the sample probe are completed prior to sample collection. A helium shroud is utilized to verify the tightness of the sample probe and sampling train contained within the shroud. The helium shroud consists of a polyethylene box placed over the sample port. Sample tubing, consisting of quarter (1/4) inch outside diameter HDPE is

connected to the sample port barbed fitting utilizing approximately two (2) inch long pieces of LS15 silicon tubing and connected to the helium shroud internal sample train. Helium is introduced through a valve in the top of the helium shroud to a concentration of twenty (20) to fifty (50) percent by volume. A MiniRAE PID with internal pump is used to purge the sample line connected to the sample port with at least four (4) volumes of air removed from the tubing. The purge air is monitored for the presence of helium using an OxyCheq Expedition Helium Analyzer. Once the line is purged and the helium detector identified the seal is adequate the sample line is disconnected from the vacuum pump and connected to the sampling container. The sample train and vapor probe seal are considered sealed when helium concentrations in the purge air is less than five (5) percent of the shroud concentration.

Sub-slab vapor samples are collected utilizing a laboratory provided canister, received with a vacuum, and a flow controller. The flow controller is connected to the sample line with a compression fitting to the quarter (1/4) inch HDPE. Once the flow controller is connected the initial vacuum is recorded and the sample canister draws vapor until the vacuum pressure decreased to two (2) to five (5) inches of mercury at which time it is disconnected flow controller to stop sample collection. Collected sub-slab vapor samples will be submitted to a state certified laboratory for analysis of VOC (EPA Method TO-15).

3.1.2 Indoor Ambient Gas Sampling

Indoor air samples are collected utilizing a laboratory provided canister, received with a vacuum, and flow controller. The initial vacuum reading will be noted, and the valve will be opened. The canister valve will be closed after the vacuum pressure decreased to two (2) to five (5) inches of mercury. Collected indoor ambient vapor samples will be submitted to a state certified laboratory for analysis of VOC (EPA Method TO-15).

3.1.3 Sewer Gas Vapor Sampling

Sewer Gas Vapor samples will be collected in following the sample collection methodologies outlined in the WDNR Guidance for Documenting the Investigation of Human-made Preferential Pathways Including Utility corridors

(RR-649, June 2021). The sanitary sewer lines will be accessed via a clean-out or by pushing tubing through the p-trap of a sink. The access point will be sealed and the sanitary sewer line allowed to equilibrate for at least one (1) hour prior to sample collection. After the sanitary sewer line has been allowed to equilibrate the sample line will be purged for five (5) minutes using a 4-gas with PID meter with field measurements for Oxygen, Carbon Monoxide (CO), Lower Explosive Limit (LEL), Hydrogen Sulfide (H₂S) and Volatile Organic Compounds (VOCs).

Sewer gas vapor samples are collected utilizing a laboratory provided canister, received with a vacuum. Collected sewer gas vapor samples will be submitted to a state certified laboratory for analysis of VOC (EPA Method TO-15).

3.2 Quality Assurance/Quality Control (QA/QC)

REI personnel will maintain strict adherence to established QA/QC procedures during sample collection and handling. EPA and/or WDNR standard accepted sample collection, transportation and storage protocols will be implemented prior to analysis of samples by a state certified laboratory. Sample containers will be properly preserved and stored prior to analysis. Dates of analysis, contingent upon the shelf life of the parameter of interest, will be noted. Field chain-of-custody (COC) documentation will be maintained for each sample. Internal laboratory QA/QC protocols will be adhered to in accordance applicable EPA documents.

3.2.1 Chain of Custody

Upon completion of a soil or groundwater sample, a chain of custody log will be initiated. The chain of custody record will include the following information: project name, work order number, shipped by, shipped to, sampling point, location, field ID number, date and time taken, sample type, number of containers, analysis required, sampler(s) signature(s), etc. The fewest number of people possible will handle the samples.

3.2.2 Decontamination

Decontamination of all field equipment will be performed to eliminate potential cross-mixing between discrete sampling points. Single use sample supplies

will be disposed of after use. All sampling equipment will be decontaminated by washing with an Liquinox/deionized water solution and rinsing with deionized water. Wash water will be contained on-site in Wisconsin Department of Transportation (WDOT) approved 55-gallon drums pending proper disposal or treatment.

4.0 CHEMICAL ANALYSIS OF VAPOR SAMPLES

Vapor samples collected will be submitted to a state certified laboratory for analysis of VOCs by EPA Method TO-15. Samples will be collected in laboratory prepared canisters and transported to a state certified laboratory. Laboratory analysis of the collected soil samples will be completed in accordance with EPA and/or WDNR accepted methods.

5.0 CHEMICAL ANALYSIS OF WATER SAMPLES

Water samples collected will be submitted to a state certified laboratory for analysis of VOCs by EPA Method 8260. Samples will be collected in laboratory prepared vials, placed into an iced cooler and transported to a state certified laboratory. Laboratory analysis of the collected groundwater samples will be completed in accordance with EPA and/or WDNR accepted methods.

6.0 REPORTING

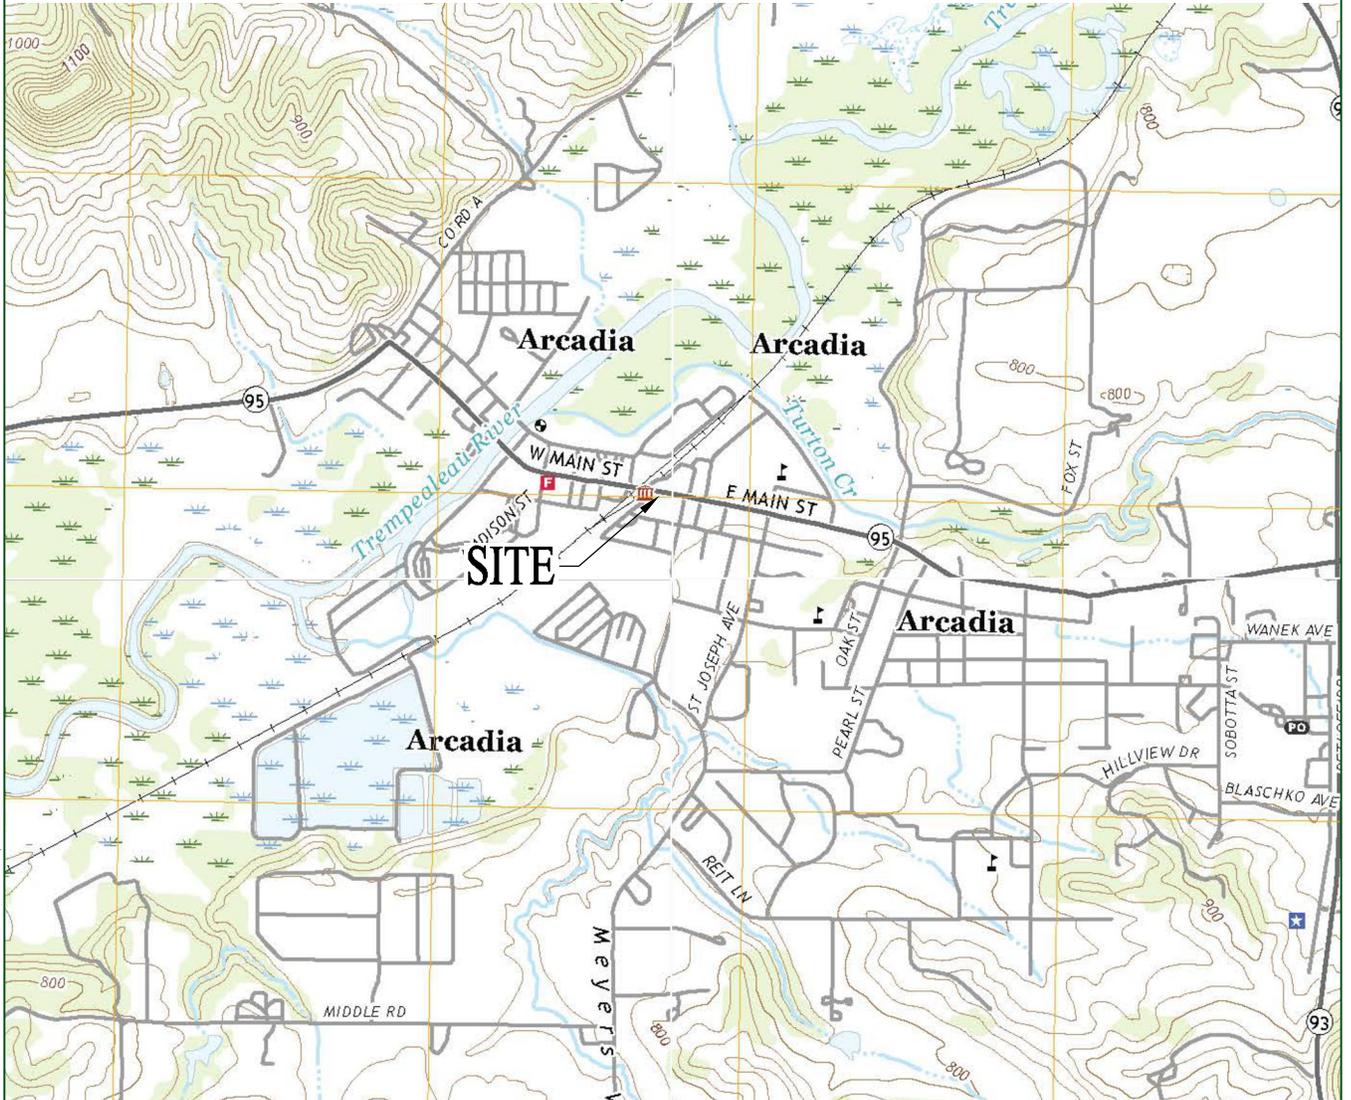

At the conclusion of the field investigation, REI will analyze the data collected and prepare a written report of the findings. Measurements that are taken in the field will be utilized to prepare a scaled map of the subject site. All data will be summarized into data tables. The report that follows the investigative work will provide documentation of all work performed for the project.

7.0 PROJECT SCHEDULE

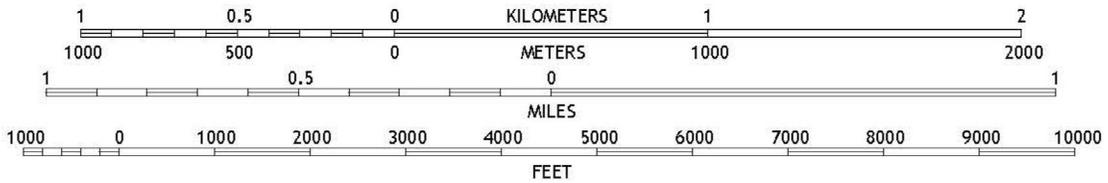

The Site Investigation will proceed according to the following schedule, but may be altered accordingly should additional work be required beyond the scope of work outlined in the Work Plan:

TASK DESCRIPTION	Time in Weeks					
	1	2	3	4	5	6
1. Approval of Work Plan	*					
2. Access Agreements						
2. Field Work						
3. Lab Analysis						
4. Data Interpretation & Draft						
5. Final Report

Notes:
NR 720 Standards Obtained From WDNR RR Program's Soil RCL Spreadsheet
This site is assessed as Non-Industrial
Cumulative RCL Calculated on: _____
RCL = Residual Contaminant Level
DC = Direct Contact
mg/kg = Parts Per Million (ppm)
< = Concentration Below Laboratory Detection Limit
* = Laboratory analytical report no located in WDNR file during review. Concentrations not reported in historic analytical tables.
- = Not Sampled/Not Reported
- - = No Standard/Not Applicable
J = Estimated concentration at or above the Limit of Detection (LOD) and below the Limit of Quantitation (LOQ)

<i>Italic</i>	= Exceeds NR720 Groundwater Pathway Protection
Bold	= Exceeds NR720 Non-Industrial Not-To-Exceed DC RCL
<u>Underlined</u>	= Exceeds NR720 Industrial Not-To-Exceed DC RCL

Notes:

NR 720 Standards Obtained From WDNR RR Program's Soil RCL Spreadsheet

This site is assessed as Non-Industrial

Cumulative RCL Calculated on: _____

RCL = Residual Contaminant Level

DC = Direct Contact

mg/kg = Parts Per Million (ppm)

< = Concentration Below Laboratory Detection Limit

- = Not Sampled/Collected

-- = No Standard/Not Applicable

^J = Estimated concentration at or above the Limit of Detection (LOD) and below the Limit of Quantitation (LOQ)

<i>Italic</i>	= Exceeds NR720 Groundwater Pathway Protection
Bold	= Exceeds NR720 Non-Industrial Not-To-Exceed DC RCL
<u>Underlined</u>	= Exceeds NR720 Industrial Not-To-Exceed DC RCL

Notes:
Indoor Air Standards based on US EPA Vapor Intrusion Screening Levels online calculator.
VAL Calculated on Date: 7/9/2021
AF = Attenuation Factor
VAL = Vapor Action Level
VRSL = Vapor Risk Screening Level
< = Concentration Below Laboratory Detection Limit
- = Not Sampled/Collected
-- = No Standard/Not Applicable
j = Estimated concentration at or above the Limit of Detection (LOD) and below the Limit of Quantitation (LOQ)
c = carcinogen
n = non-carcinogen
Target Risk for Carcinogens = 1.00E-05
Target Hazard Quotient for Non-Carcinogens = 1

Immediate Action Criteria for Indoor Air
Carcinogens (c) = 10 x VAL
Non-carcinogens (n) = 3 x VAL

<i>Italics</i>	= Exceeds US EPA Residential VAL
Bold	= Exceeds US EPA Commercial VAL
<u>Underlined</u>	= Exceeds Immediate Action Criteria for Indoor Air
