Subject: RE: DNR review of July SI report - Julson Store (03-06-001296)

Ken –

Thank you for the email summary and additional actions mentioned. Yes, as we discussed, we feel the Site Investigation and Site Investigation Report are incomplete. In order to comply with NR716, at a minimum, the actions mentioning in your email message below need to be carried through. Also, please keep PECFA requests separate from report submittals.

Once the required additional Site Investigation work is completed, and a review of the revised Site Investigation Report has taken place and approved, a determination regarding remedial options will be addressed at that time.

Please note that I made a few small changes to your previous email to more accurately define the path moving forward.

I appreciate your patience and willingness as we work to get these sites properly investigated, remediated (if needed), and closed while the PECFA program is still going.

Please do not hesitate to contact me with any questions or concerns.

Thank you,
Aaron

We are committed to service excellence.

Subject: DNR review of July SI report - Julson Store (03-06-001296)

Hi Aaron.

Bc: John Marum – property owner

This email follows our telephone conversation last Friday (15th) in which we discussed the Soil and GW Inv. Rpt submitted in July for the Julson Store (former) site south of Mondovi. In that report, I recommended we complete an interim remedial excavation this fall followed by test wells and monitor to closure.

DNR staff determined that more Site Investigation is needed before a remedial option should be considered and approved. Subsequently, I will send you a revised Change Order/Work Plan to install 2-inch monitoring wells in order to define the extent of impacted ground water and characterize the aquifer properties (e.g., hydraulic conductivity, ground water flow direction (horizontal, vertical), etc). I will also install additional soil borings (and sampling) to more precisely define the extent of impacted soil.

Our goal is to complete the SI work through the winter so that a remedial option ~~can~~ **may** be implemented next summer ... which ~~is~~ **may be** needed to complete this project before the upcoming PECFA deadline.

Please let me know if you have any additional comments about the project.

Will send you CO/WP shortly.

Thanks for your phone call.
