Subject: Walkers One Stop – Annual Groundwater Monitoring Report

Dear Mr. Myers,

Enclosed is the report for the Walkers One Stop site located in Gratiot, Wisconsin. **This completes the Public Bidding Deferred workscope approved on May 6, 2014.**

Post Excavation Groundwater Monitoring Workscape

On March 10, 2015, METCO personnel collected groundwater samples from all site monitoring wells (MW-1 through MW-10) for PVOC, Naphthalene, and Dissolved Lead analysis. Water level, dissolved oxygen, pH, ORP, specific conductance, and temperature measurements were collected from all sampled wells. During the sampling event, METCO personnel properly surveyed newly replaced monitoring well MW-5R to feet mean sea level (MSL).

On June 10, 2015, METCO personnel collected groundwater samples from all site monitoring wells (MW-1 through MW-10) for PVOC and Naphthalene analysis. Water level, dissolved oxygen, pH, ORP, specific conductance, and temperature measurements were collected from all sampled wells.

On September 10, 2015, METCO personnel collected groundwater samples from all site monitoring wells (MW-1 through MW-10) for PVOC and Naphthalene analysis. Water level, dissolved oxygen, pH, ORP, specific conductance, and temperature measurements were collected from all sampled wells. During the sampling event, the PVC for MW-1 was cut down in order to bolt down the flush mount cover.

On December 9, 2015, METCO personnel collected groundwater samples from all site monitoring wells (MW-1 through MW-10) for PVOC, Naphthalene, and Dissolved Lead analysis. Water level, dissolved oxygen, pH, ORP, specific conductance, and temperature measurements were collected from all sampled wells. During the sampling event, monitoring well MW-1 was properly re-surveyed to feet MSL.

Discussion of Groundwater Results

Monitoring Well MW-1: Currently shows NR140 Enforcement Standard (ES) exceedances for Benzene (198 ppb) and Naphthalene (120 ppb). It also shows a NR140 Preventive Action limit (PAL) exceedance for Trimethylbenzenes (199.6 ppb). The contaminant concentrations appear to be stable.

Monitoring Well MW-2: Currently shows no detects for PVOC, Naphthalene, and Dissolved Lead.

Monitoring Well MW-3: Currently shows NR140 ES exceedances for Benzene (194 ppb), Ethylbenzene (1,460 ppb), Naphthalene (620 ppb), Trimethylbenzenes (2,684 ppb), and Xylene (4,190 ppb). The contaminant concentrations appear to be stable to decreasing.

Monitoring Well MW-4: Currently shows NR140 ES exceedances for Benzene (16.2 ppb), Ethylbenzene (770 ppb), Naphthalene (440 ppb), Trimethylbenzenes (2,230 ppb), and Xylene (2,420 ppb). It also shows a PAL exceedance for Dissolved Lead (3.0 ppb). The contaminant concentrations appear to be stable to decreasing.

Monitoring Well MW-5R: Currently shows NR140 PAL exceedances for Benzene (1.88 ppb) and Dissolved Lead (1.50 ppb). The contaminant concentrations appear to be stable to decreasing, as this is the first time this well has shown no NR140 ES exceedances.

Monitoring Well MW-6: Currently shows NR140 ES exceedances for Benzene (186 ppb), Ethylbenzene (1,090 ppb), Naphthalene (490 ppb), Trimethylbenzenes (2,027 ppb), and Xylene (2,550 ppb). It also shows a PAL exceedance for Dissolved Lead (2.1 ppb). The contaminant concentrations appear to be stable to decreasing.

Monitoring Well MW-7: Currently shows NR140 ES exceedances for Benzene (440 ppb) and Naphthalene (340 ppb). The Benzene concentrations appear to be stable, however the Naphthalene has increased.

Monitoring Well MW-8: Currently shows a NR140 ES exceedance for Benzene (161 ppb). It also shows PAL exceedances for Naphthalene (71 ppb), Trimethylbenzenes (304.5 ppb), and Xylene (406 ppb). The contaminant concentrations appear to be stable to slightly increasing in the most recent round.

Monitoring Well MW-9: Currently shows no detects for PVOC, Naphthalene, and Dissolved Lead.

Monitoring Well MW-10: Currently shows no detects for PVOC, Naphthalene, and Dissolved Lead.

Conclusions/Recommendations

METCO recommends that the Walker's One Stop site be reviewed for the possibility of "closure" for the following reasons: 1) The majority of the accessible contaminated soil has been removed during the excavation project. 2) Monitoring well MW-1 is the only well that has ever had free product and hasn't had product since the February 2012 sampling event (0.50 inches). 3) Overall groundwater contaminant trends appear to be stable to decreasing, with the exception of down-gradient wells MW-7 (Naphthalene) and MW-8 (Benzene) which have increased during the most recent round. 4) Groundwater flow appears to be going away from Wolf Creek. 5) The main municipal water supply well exists approximately 3,000 feet to the southeast of the subject property. However the backup municipal well exists approximately 500 feet to the southeast of the subject property.

If the state concurs that "closure" is a viable option at this time, please contact METCO to discuss closure activities. However, if due to the increasing groundwater contaminant trends in down-gradient wells MW-7 and MW-8 the state determines that additional groundwater monitoring will be required to further assess contaminant trends, please contact METCO to discuss workscope and costs.

Per WDNR response METCO will proceed with the project.

A Detailed Site Map, Groundwater Flow Maps, Groundwater Isoconcentration Map, Data Tables, and Laboratory Documents have been attached.

If you have any questions or comments please feel free to call (608-781-8879) or email at jasonp@metcohq.com.

Sincerely,

Jason T. Powell
Staff Scientist

"J" Flag: Analyte detected between LOD and LOQ

LOD Limit of Detection

LOQ Limit of Quantitation

Code *Comment*

1 Laboratory QC within limits.

CWT denotes sub contract lab - Certification #445126660

All solid sample results reported on a dry weight basis unless otherwise indicated. All LOD's and LOQ's are adjusted for dilutions but not dry weight. Subcontracted results are denoted by SUB in the analyst field.

Authorized Signature

Invoice # E29095

"J" Flag: Analyte detected between LOD and LOQ

LOD Limit of Detection

LOQ Limit of Quantitation

Code *Comment*

1 Laboratory QC within limits.

All solid sample results reported on a dry weight basis unless otherwise indicated. All LOD's and LOQ's are adjusted for dilutions but not dry weight. Subcontracted results are denoted by SUB in the analyst field.
