Tom,

I would like to take about 8 samples off of where the old MGP plant was in Superior. I think the bottom is 7 to 12 feet. We would be using Ekman or Ponar. I would like you to help me on it. Let me know what your availability around mid to late August is. I will line up on of the Fish Program's work boats.

Sampling parameters:

PAHs  
RCRA metals  
Anything else you think is necessary?
