**Re: Supplemental Site Investigation Report
Former Peters Dry Cleaners
5094 West College Avenue, Greendale, Wisconsin
WDNR BRRTS# 02-41-284323
EnviroForensics Project# 6305**

Dear Mr. Peters:

Environmental Forensic Investigations, Inc. (EnviroForensics) is pleased to provide this Supplemental Investigation Report for the Peters One Hour Cleaners located at 5094 West College Avenue, Greendale, Wisconsin (Site). The additional work performed was based on comments received from the Wisconsin Department of Natural Resources (WDNR) in its *Site Investigation Review and Request for Additional Investigation* letter dated June 7, 2016. The WDNR requested additional site investigation work to further delineate the soil and groundwater impacts at on- and off-Site locations. In response to WDNR requirements for further characterization of the nature and extent of subsurface impacts, EnviroForensics submitted a Supplemental Site Investigation Work Scope to the WDNR Dated June 23, 2016.

INVESTIGATION ACTIVITIES

EnviroForensics mobilized to the Site on multiple occasions in July and August 2016 to perform the following activities:

- Re-sampled MW-11 to verify groundwater results;
- Advanced wo (2) interior hand-auger soil borings with soil sampling to define shallow soil impacts within building footprint;
- Advanced three (3) soil borings (DP-25 through DP-27) to facilitate soil sampling to define shallow soil impacts;
- Advanced two (2) soil borings (DP-28 and DP-29) and installed temporary wells to define off-site groundwater impacts;
- Collected a total of 12 soil and two (2) groundwater investigation samples;
- Collected water lever measurements and groundwater samples from select permanent monitoring wells (MW-3, MW-8, MW-9 and MW-11); and
- Updated the Site maps and Cross Sections with utilities locations and depths.

Supplemental Site Investigation Report

Document: 6305-0430

Environmental Forensic Investigations, Inc.

Phone: 262-290-4001 • Fax 317-972-7875

Figure 1 shows updated Site details including floor drains and utilities with depths, locations of the former dry cleaning machine, and doors. **Figure 2** shows the expanded surrounding areas and all investigation sample locations. **Figures 3 and 4** present the cross-section transect and cross section showing the utilities and depths.

Direct-Push Boring, Hand-Auger Boring and Sampling

Two (2) hand-auger borings were advanced beneath the Site building to approximately 6 feet below ground surface (bgs) to further define the extents of soil impacts within the building footprint. Three (3) on-site direct-push borings (DP-25 through DP-27) were advanced between GP-1 and DP-7 to 5 feet bgs to further define the extent of shallow soil impacts. Two (2) direct-push borings (DP-28 and DP-29) were advanced 20 feet bgs north of MW-11 to further define off-site groundwater impacts. The locations of the hand auger and direct-push soil boring locations are depicted on **Figure 2**.

Continuous soil sampling was conducted at each of the locations. Two (2) soil samples were collected from hand auger boring HA-1 and three (3) soil samples were collected from hand auger boring HA-2. Two (2) soil samples were collected from each of the on-site 5 foot soil borings; one (1) soil sample was collected from the boring (DP-29) furthest north. Soil samples were collected from the unsaturated zone based on highest PID detections.

One (1) temporary monitoring well was installed at each off-Site direct-push boring (DP-28 and DP-29) locations using ¾-inch by 10-foot polyvinyl chloride (PVC) well screen straddling the water table to further define the horizontal extent of groundwater contamination. The temporary wells were purged and sampled using new disposable bailer for each well. One grab groundwater sample was collected from each of the temporary wells. One (1) duplicate groundwater sample, one (1) field blank sample, and one (1) trip blank sample were analyzed for quality assessment and quality control (QA/QC) purposes. The temporary well locations are depicted on **Figure 2**.

A total of 12 soil samples, two (2) groundwater samples, and three (3) QA/QC samples were submitted using appropriate chain-of-custody documentation to Synergy Environmental Laboratory, INC. (Synergy) and analyzed for volatile organic compounds (VOCs) using the United States (U.S.) Environmental protection Agency (EPA) SW-846 Method 8260.

Investigation derived media (IDM) was containerized in 55-gallon drums. The drums were labeled and staged on-Site pending waste characterization and disposal.

Monitoring Well Sampling

EnviroForensics collected groundwater samples from monitoring wells MW-3, MW-8, MW-9 and MW-11. Groundwater elevation data was collected from each select well prior to sampling. Each monitoring well was purged and sampled using new disposable bailer. One (1) duplicate groundwater sample, (1) field blank sample, and one (1) trip blank sample were analyzed for

QA/QC purposes. The groundwater and QA/QC samples were submitted using appropriate chain-of-custody documentation to Synergy and analyzed for volatile organic compounds (VOCs) using the United States (U.S.) Environmental protection Agency (EPA) SW-846 Method 8260. The well locations are depicted on **Figure 2**.

Deviations from Work Scope

As requested by the WDNR, MW-11 was resampled prior to delineating further to the north. Tetrachloroethene (PCE) was detected in the groundwater but at a concentration below the Enforcement Standard. Therefore, only two (2) of the four (4) borings to the north of MW-11 were completed. The proposed monitoring well was not installed since the initial groundwater sample collected from MW-11 and delineation samples resulted in no detections of PCE above the ES.

SUPPLEMENTAL SITE INVESTIGATION RESULTS

Soil Analytical Results

The soil analytical results are summarized and compared to Residual Contaminant Levels (RCLs) on **Table 1**. The results are illustrated on **Figure 5**, and the laboratory reports related to the soil samples are provided in **Appendix A**.

Soil samples collected from borings DP-25, DP-26, DP-27, HA-1, and HA-2 contained concentrations of PCE and/or breakdown products above the soil to groundwater RCLs. No others samples contained detectable VOCs.

Groundwater Analytical Results

The groundwater analytical results from the permanent and temporary monitoring well samples are summarized and compared to WDNR standards in **Table 2** and **Table 3**, respectively.

Figure 6 presents the groundwater results, while **Figure 7** presents the extent of groundwater impacts that exceed WDNR Preventive Action Limits and the Enforcement Standards for PCE, trichloroethene, total cis-/trans-1,2-Dichloroethene (DCE), and vinyl chloride on individual maps. The laboratory reports related to the groundwater samples are provided in **Appendix A**.

The PCE contaminant plume in soil and water is defined. In general, the presence of TCE, cis-1,2-DCE, trans-1,2-DCE and vinyl chloride in all impacted wells demonstrate that the plume is decreasing and naturally attenuating.

CONCLUSIONS AND RECOMMENDATIONS

The recent investigation activities shows the soil source is in shallow soils below the former dry cleaning machine and just outside the building where solvent transfer occurred. The groundwater delineation data from DP-28 and DP-29 indicates the plume does not migrate beyond MW-11 in a significant way. Additionally, due to the presence of a 22 acre public park without buildings of any kind west of 54th Street there are no potential exposure pathways to consider to the west. A church is located approximately 200 feet to the north-northwest of MW-11. Without continuous occupancy or the presence of schooling, there are no exposure pathways for that location either. The Site investigation has been completed to a reasonable extent and should move towards remediation and closure.

To facilitate the development of a remedial action plan, EnviroForensics recommends two (2) additional rounds of consecutive quarterly sampling events from the on-site wells MW-5, MW-8, MW-9, and MW-11. Each well should be sampled and analyzed for VOCs, dissolved gases (ethene, ethane, and methane), Ferrous iron (Fe^{2+}) and manganese (Mn), nitrate/nitrite, sulfate, chloride, and total organic carbon (TOC). One (1) sample from MW-5 will also be collected for presence of the bacteria *Dehalococcoides ethenogenes*. Additionally, the off-site wells on the College Square Apartments property have been non-detect or below the Enforcement Standard for at least four (4) sampling events. The wells MW-1 through MW-4 should be abandoned because investigation activities are complete, no exposure pathways have been identified, and remedial actions are not necessary for the off-site property.

We appreciate the opportunity to provide you with this Supplemental Site Investigation Report. If you have any questions or require additional information, please do not hesitate to contact us at 1-866-888-7911.

Sincerely,

Environmental Forensic Investigations, Inc.

"J" Flag: Analyte detected between LOD and LOQ

LOD Limit of Detection

LOQ Limit of Quantitation

Code **Comment**

1 Laboratory QC within limits.

All solid sample results reported on a dry weight basis unless otherwise indicated. All LOD's and LOQ's are adjusted for dilutions but not dry weight. Subcontracted results are denoted by SUB in the analyst field.

Project Name FMR PETER'S DRY CLEANERS
Project # 6305

Invoice # E31384

"J" Flag: Analyte detected between LOD and LOQ

LOD Limit of Detection

LOQ Limit of Quantitation

Code **Comment**

1 Laboratory QC within limits.

All solid sample results reported on a dry weight basis unless otherwise indicated. All LOD's and LOQ's are adjusted for dilutions but not dry weight. Subcontracted results are denoted by SUB in the analyst field.

Project Name FMR PETER'S DRY CLEANERS
Project # 6305

Invoice # E31514

"J" Flag: Analyte detected between LOD and LOQ

LOD Limit of Detection

LOQ Limit of Quantitation

Code **Comment**

1 Laboratory QC within limits.

All solid sample results reported on a dry weight basis unless otherwise indicated. All LOD's and LOQ's are adjusted for dilutions but not dry weight. Subcontracted results are denoted by SUB in the analyst field.

Authorized Signature
