WDNR BRRTS#: 03-45-002078 PECFA Claim #: 54914-3412-29

Robert Korth 820 W Weiland Avenue Appleton, WI 54914

Dear Mr. Korth,

Enclosed is our "Site Investigation Field Procedures Workplan" concerning the Korth Property site in Appleton, Wisconsin. This document outlines the procedures and the methods used to conduct such an investigation.

A copy of this workplan will be sent to the Wisconsin Department of Natural Resources for review.

We appreciate the opportunity to be of service to you on this project. Should you have any questions or require additional information, do not hesitate to contact our La Crosse office.

Sincerely,

The T. Prevell

Jason T. Powell Staff Scientist

C: Alex Edler – WDNR

OBJECTIVES

Requirements of the WDNR

A Site Investigation is required by the Wisconsin Department of Natural Resources (WDNR) by authority of Section 292.11 of the Wisconsin Statutes. According to the WDNR, any soil that tests over 10 ppm Gasoline Range Organics (GRO) or Diesel Range Organics (DRO) requires an investigation. Any soil that tests over the Chapter NR720 Groundwater RCLs, Direct Contact RCLs, or Soil Saturation Values an investigation and possible remediation. Any groundwater that tests over the Preventive Action Limits (PAL) or Enforcement Standards (ES) for compounds listed in Chapter NR140 of the Wisconsin Statutes requires an investigation and possible remediation. For a further explanation of WDNR rules and regulations, see Appendix D.

Requirements of the PECFA Program

According to rules adopted in May 2006, the maximum allowable cost for an initial Site Investigation shall be no more than \$20,000 unless pre-approved by PECFA. All consultant and commodity service costs must not exceed the PECFA Usual and Customary Charges.

Purpose of Document

This document briefly outlines all methods and procedures used by METCO personnel concerning "Site Investigations". These guidelines are strictly followed unless changed by managing personnel, site conditions, or project situations. All changes will be clearly noted.

All work conducted by METCO is undertaken in accordance with approved methods and regulations of the WDNR Bureau for Remediation and Redevelopment.

This document is site specific and will always be on-site during the project.

INTRODUCTION

Site Name

Korth Property

Site Address

1629 W Washington Street Appleton, Wisconsin

Legal Description

SW ¼, SW ¼, Section 27, Township 21 North, Range 17 East, Outagamie County

WTM Coordinates

645150, 422257

Please note that the WDNR RR sites map shows the site location to be on the adjacent property to the west. The above coordinates are the correct location.

SITE BACKGROUND

Facility

Schmidt Oil operated a bulk petroleum storage facility on the subject property from approximately the 1950s until the 1970s. A 1970 Sanborn Fire Insurance Map shows seven gasoline storage tanks and a pump house on the property. Korth Upholstery purchased the property in 1981 and built the exiting building. During construction of the building, a large fuel oil UST (est. 20,000-gallons) was removed from the subject property.

On April 20, 1995, Environmental Assessments, Inc. completed one soil boring in the area of a removed full UST. One soil sample was collected from the soil boring for GRO, DRO, PVOC, 1,2-DCA, and PAH analysis. The analytical results showed 196 ppm GRO, 123 ppm DRO, and several low level detects for PVOC and PAH compounds. The petroleum contamination was subsequently reported to the WDNR, who then required that a site investigation be conducted.

Numerous other LUST, ERP, and Spill sites exist within the City of Appleton. The closest of these, Aratex Services, Inc. (BRRTS# 03-45-001068), is located approximately 225 feet to the northeast of the subject property. In the 1980s, a petroleum storage tank was removed from the adjacent property to the west. The environmental status of this property is not known.

Potential Risks and Impacts

The subject property and surrounding properties are all served by the City of Appleton municipal water supply, which draws it's potable water from Lake Winnebago. METCO is not aware of any private water supply wells in the area, however neighboring properties will be inspected for private water supply wells during the site investigation.

METCO is not currently aware of any other impacts, receptors, risks, or local problems associated with the subject property.

SITE CONDITIONS

Topography

According to the USGS Hydrologic Atlas, Appleton is located in the central portion of the Fox-Wolf River Basin. This area is characterized by relatively flat plains with some generally north-south ridges. The topography and drainage of this area is controlled by the topography of the bedrock surface, and modified by glacial erosion and deposition.

The elevation of the site is approximately 810 feet above Mean Sea Level (MSL). See Appendix A for site location.

Geology

Native unconsolidated materials in this area generally consist of silt/clay. The unconsolidated materials are underlain by limestone/dolomite bedrock at approximately 25-75 feet below ground surface.

Hydrology

The nearest surface water is the Fox River, which exists approximately 1 mile to the southeast of the subject property.

Hydrogeology

Based on nearby LUST sites, groundwater is expected to exist at approximately 5 to 10 feet below ground surface. Local groundwater flow is expected to be toward the east to southeast.

SCOPE OF WORK

Site Investigation

An investigation consists of collecting samples of soil, groundwater, and vapor for analysis by a laboratory for compounds related to petroleum products. The WDNR requires that the investigation determine the degree and extent of contaminants in these mediums, which is commonly referred to as "defining the contaminant plume". Further background information will also be collected to assist in the investigation.

Geoprobe Project

METCO has proposed a 1-2 day Geoprobe Project. We propose 20 to 25 borings to 10-15 feet with soil and groundwater sampling. The Geoprobe will be used to collect soil samples at various depths in order to determine the general extent of contaminants in the subsurface environment.

The goal of the Geoprobe Project is to complete the following:

- 1. Determine general subsurface geotechnical characteristics.
- 2. Determine general extent of the contaminants in the unconsolidated deposits.

- 3. Determine the general extent of contaminants in groundwater, if applicable.
- 4. Determine if contaminants have migrated to competent rock, if applicable.

This data will either completely define the extent of contamination or be used to guide the Drilling Project if required.

Vapor Sampling Project

METCO has proposed to install 3 sub slab vapor sampling ports within the footprint of the on-site building. These sampling ports along with one indoor air sample will then be sampled by collecting an air sample using a suma canister and submitted to a certified laboratory for Method TO-15 (PVOC and Naphthalene) analysis.

Drilling Project (if required)

METCO has proposed 8 to 10 boreholes to be completed on/off site. METCO has also proposed 6 to 8 monitoring wells to be installed on/off site. Based on the results of the Geoprobe project, we will be able to determine how many monitoring wells will need to be installed.

The goal of the Drilling Project is to complete the following:

- 1. Collect a soil sample for field analysis every 2.5 feet of boring.
- 2. Collect at least two soil samples for laboratory analysis in every boring.
- 3. Verify, through sampling, the horizontal and vertical extent of soil contamination, including smear zones.
- 4. Install monitoring wells in an arrangement that fully defines the horizontal and vertical extent of groundwater contamination.
- 5. Develop the monitoring wells.
- 6. Collect at least two rounds of groundwater samples from the monitoring wells.
- 7. If conditions warrant, perform slug tests on at least one monitoring well.

Report Preparation

The final report, prepared by METCO, will include background information, observations, procedures, methods, field data, laboratory analysis, site maps, data analysis, risk assessment, conclusions, and recommendations concerning

all activities conducted for this project. This report will be submitted to the client and the WDNR for review and discussion.

METCO PROCEDURES AND METHODS

Geoprobe

The Geoprobe consists of a truck mounted, hydraulically driven unit that advances 1-inch diameter, 3 or 4-foot long, stainless steel rods into the subsurface. At desired depths, either a soil or water sample can be collected.

A 4-foot or 5-foot long, $\frac{1}{2}$ or 1-inch diameter soil sampler is advanced to the sampling location. At desired depths, a soil sample is collected and brought to the surface for analysis.

All Geoprobe holes are properly abandoned to ground level using bentonite clay and a surface seal.

Vapor

The sub-slab vapor sampling port will be constructed by drilling a ½-inch pilot hole through the concrete slab and several inches into the sub slab material with a hammer drill. A 1½-inch outer hole is then drilled to depths ranging from ¾ -inch to 1-inch, depending on the concrete slab thickness. The hole will then be cleaned of dust and drilling debris using a shop-vac. A stainless steel vapor pin is then installed in the inner hole with a silicon sleeve to obtain an air tight seal with the concrete floor. The remainder of the hole is sealed with hydrated bentonite and a water dam test will be conducted to confirm that the seal is air tight.

Vapor samples will be collected by using a short length of Teflon tubing to connect the sampling port and a 6-liter Suma canister. The air sample is then collected using a Suma canister with a flow regulator that allows sub-slab vapor samples to be collected over a 30 minute period. Prior to collecting the sub-slab vapor samples, a shut in test is conducted to assure that the fittings between the sample probe and sampling container are air tight.

The indoor air sample will be collected using a Suma canister with a flow regulator that allows the air sample to be collected over a 24 hour period for VOC analysis.

Drilling

Drilling is conducted with a truck mounted auger drill rig. To penetrate any

2

unconsolidated materials, work is conducted in accordance with ASTM D-1452 "Soil Investigation and Sampling by Auger Boring". If bedrock is encountered and cannot be penetrated with auger boring, an accepted air-rotary drilling procedure will be used.

Sampling unconsolidated materials is done in accordance with ASTM D-1586 "Penetration Tests and Split-Barrel Sampling of Soils" using a 2-inch outside diameter (O.D.), 2.5 foot split spoon sampler. Using this procedure, a split spoon sampler is driven into the soil by a 140-pound weight falling 30-inches, and a soil sample collected.

All borings are properly abandoned to ground level using bentonite clay.

HNU Screening

Each of the samples, for headspace analysis, are placed in a clean, clear, plastic Ziploc bag. These containers are to be filled ½ full. All containers are the same size and filled to the same volume. The containers are then sealed.

Once collected and sealed, samples are shaken for 30 seconds to break apart soil clods. They are then allowed to establish headspace. The following table is used to determine headspace equilibration time.

Outside temperature Time to establish headspace

- <40 deg. F 40 minutes
- 41-55 deg. F 20 minutes
- 56-69 deg. F 10 minutes
- >70 deg. F 5 minutes

To take readings, the HNU probe is inserted into the plastic bag halfway between the sample and the highest meter response recorded. The samples are screened with a MODEL DL-102 HNU Meter equipped with a 10.6 eV lamp. Metered calibration is done at the beginning of each workday. Other notes taken are as follows:

- 1. Temperature and weather conditions.
- 2. Date of last factory calibration.
- 3. Field calibration gas used and concentration.
- 4. Date and time of last calibration.
- 5. Instrument gain setting.

- 6. Erratic instrument readings.
- 7. Cleaning or repairs performed in the field.
- 8. Sample moisture (saturated, wet, moist, damp, dry).
- 9. Petroleum odors or staining of samples.
- 10. Any instrument quenching.
- 11. Other relevant information.

Monitoring Wells

Groundwater monitoring well installations are completed under the direction of a METCO hydrogeologist and in accordance with Wisconsin Department of Natural Resources Chapter NR141, "Groundwater Monitoring Well Requirements." The monitoring wells are constructed of flush-threaded, two-inch inside diameter schedule 40 or 80 polyvinyl chloride (PVC) piping. Ten-foot well screens with 0.010-inch slots are installed approximately 5 to 6 feet into the watertable. A uniform washed sand is installed around the well screens to serve as a filter pack. Granular bentonite is used above the filter pack to provide a surface seal. Steel, locking protective well casings are cemented in at each well. Any variances from NR141 will be reported to the WDNR.

Each well is developed by alternately surging and purging with a clean polyethylene bailer for 20 to 30 minutes to remove fines from the well screen, after which ten well volumes are removed using a submersible pump.

Groundwater level measurements are obtained using an electronic water level indicator. All measurements are recorded to the nearest 0.01-foot. The probe is thoroughly washed between measurements.

At least two rounds of samples are collected using a bottom loading, disposable, polyethylene bailer and disposable polyethylene cord. Approximately four well volumes are purged from each well before collecting samples.

Depending on site conditions and groundwater sampling results, slug tests may be conducted on two or three of the monitoring wells to determine hydrogeologic parameters (hydraulic conductivity, transmissivity, and flow velocity). During the slug test, groundwater in a monitoring well is displaced using a solid plastic slug, while water levels are recorded using a transducer and data logger. Water levels are recorded until the water level in the well returns to equilibrium. Slug test data is evaluated using the Bouwer and Rice method.

1.1.0

Well Elevation Survey

All wells are surveyed to the nearest 0.01-foot MSL by a qualified surveying company.

Sample Analysis

Environmental samples are collected to minimize both soil disturbance and exposure of the sample to the air.

Field observations such as soil characteristics, petroleum odors, product sheens, and staining associated with the samples are continuously noted throughout sampling.

The amount of sample taken, the size of the container used, and the type of sample preservation used, will depend on the laboratory contracted and for which parameters the soil samples are analyzed. See Appendix C for LUST Sample Guidelines.

All collected samples are stored in a cooler that maintains a temperature of, at most, 4 degrees Celsius. The coolers are accompanied by a complete chain of custody and are delivered to the laboratory within two days of sampling.

The WDNR document, "LUST Analytical and Quality Assurance Guidance, July 1993" is referenced in determining what parameters in which the soil and water samples will be analyzed, and the amount of duplicates/blanks required.

Quality Assurance/Quality Control/Waste Management

All drilling and sampling equipment advanced into the subsurface is cleaned between sampling locations. This consists of washing with a biodegradable Alconox solution and rinsing with potable water. Wash and rinse water are disposed of atop an isolated area of asphalt for evaporation or discharged into a local storm sewer.

Drill cuttings, field screened as being contaminated, are contained in 55-gallon DOT barrels, characterized, and properly disposed of by METCO and/or client.

Development and purge waters are contained in 55 gallon DOT barrels, characterized, and properly disposed of by METCO and/or the client. Disposal options will depend on the amount of water, type of contaminants, and concentration of contaminants. All wastewater contaminants and disposal activities are recorded with complete documentation submitted to the WDNR.

Variances

We are not aware of any variances needed at this time.

SCHEDULE FOR INVESTIGATION PROJECT

The following is a checklist of activities that have been, or will be completed, concerning the Site Investigation, along with an estimated time frame. A typical Site Investigation takes approximately 2 to 6 months. The investigation may take up to 12 months if bedrock or groundwater is contaminated.

- 1) METCO submits a Site Investigation Project proposal to client (done).
- 2) Proposal acceptance by client. METCO notifies the WDNR that a consultant has been contracted (done).
- 3) Client obtains PECFA Packet and Site Eligibility Letter from PECFA (done).
- 4) METCO submits a Site Investigation Field Procedures Workplan to client and WDNR for review and approval (1/4/17).
- 5) METCO conducts Geoprobe Project (2-4 weeks). More than one field mobilization may be needed to complete project depending on complexity of the site and project (1 month to receive lab results).
- 6) METCO conducts Vapor Sampling Project during the Geoprobe Project.
- Depending on the results of the investigation, METCO prepares a brief summary report or final report and sends copies to client and WDNR (2 months after lab results are received).

NOTE: If groundwater is found to be impacted or suspected of being impacted by released contaminants, the WDNR will require a Drilling Project with monitoring wells.

- 8) METCO conducts Drilling Project (2 months). More than one field mobilization may be needed to complete project depending on complexity of the site and project (1 month to receive lab results).
- METCO develops/surveys the installed monitoring wells and collects. Round 1 groundwater samples for laboratory analysis (1 month to receive lab results).
- 10) METCO collects Round 2 groundwater samples for laboratory analysis (1 month to receive lab results).
- 11) METCO completes any additional work that is needed, such as slug tests (1 month).
- 12) METCO prepares a Site Investigation report that contains all collected data and submits to the client and WDNR (3-6 months).

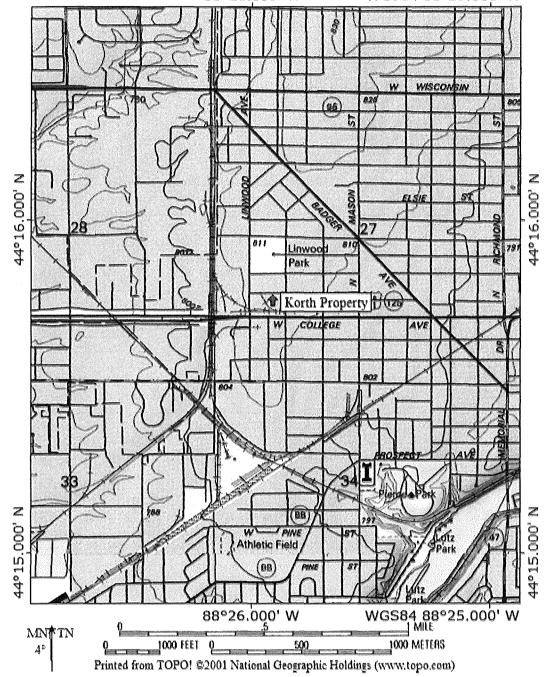

- 13) If no further investigation work is required, METCO will apply for "site closure" with the WDNR. Upon closure, METCO will complete the PECFA Application and submit for reimbursement (reimbursement takes 3 to 6 months).
- 14) If further investigation and/or remediation is required METCO will provide further assistance.

APPENDIX B/INVESTIGATION CHECKLIST

1.

SITE INVESTIGATION CHECKLIST Revised February 1992 PUBL-SW-115

This checklist was prepared by the Department of Matural Resources. It lists the necessary information to include in a site investigation report, for investigations conducted in accordance with guidelines prepared by the Emergency and Remedial Response Section, of the Bureau of Solid and Hazardous Waste Management, Wisconsin DNR. Sites include those where actions are conducted under the LUST, Spills and Environmental Repair programs. If some of this information is not submitted the report should clearly state why it is omitted. More complete information regarding site investigations is available in the Department's "Guidance on Conducting Environmental Response Actions".

The purpose of the site investigation is to 1) define the extent and degree of contamination and 2) to provide a basis for choosing a remedial action alternative. The narrative portion of the investigation report should clearly address these goals.

The Department strongly recommends that the site investigation report follow the sequence of information listed here. This will allow for a quick completeness check and more timely review of submittals. Incomplete reports will not be reviewed until all the necessary information has been received. The following information should be included in the site investigation, (as appropriate to each case):

ι. INTRODUCTION/COVER LETTER

- Project title
- Purpose of report and desired department action 2.
- 3. Client(s)
- Author(s), with signatures 4.
- 5. Scope of Services
- 6. Dates the work was performed
- 7. Date of report
- 8. Subcontractors employed by the consultant
- 11. GENERAL and BACKGROUND INFORMATION
- 1. General Information

٨. Identify the owner/operator and/or person(s) responsible: (include all applicable)

- 1. name
- 2. address
- 3. day phone number
- 4. contact person (name)
- 5. address
- 6. phone number
 - 7. verification of ownership: photocopy of deed or exact legal description of property
- В. Specify the site of contamination:
- 1. name
- 2. phone number
 - 3. specific location (street corner, miles from an intersection, etc)
 - legal address (street address if applicable, do not supply just a P.O. Box #) 8. ь. location of impacted properties by latitude and longitude, to an accuracy of seconds, at a minimum (preferred method) or State Plane coordinate system
 - location of impacted properties by quarter, quarter, section, township, range, c.
 - civil township, county, or other locational criteria if site(s) are not within the Public Land Survey system
 - type of operation: gas station, tank farm, private residence, manufacturer, etc. 4.
- с. Site Location Maps
 - 1. General Location Map
 - locate on a USGS topographic base map (include quadrangle name, series and scale) locate on a plat map, if applicable
 - 2, Local Base Map: the map must be drawn to scale and include the following items. Other features may also be needed:
 - bar scale a,
 - Ь. North arrow
 - c. legend
 - d. location of benchmark used
 - e. origin of horizontal grid system

3. Including Site Specific Features: more than one map may be appropriate, use the local map for the base map (These maps may be used for several purposes.) location of discharge on site or facility, for example, the location of (former) α. tank and pump islands and piping location of all buildings on site ь. locations of public utilities, appropriately marked c. d. property boundaries location of all soil borings and Wells (monitoring Wells and potable Wells) e. f. location of soil vapor points locations of where field screenings and lab confirmation samples were taken g. h. nearby/neighboring structures and private wells (within 1200 feet) i. any nearby surface waters (within map scale) roads and paved areas, and other access areas i. k. known and potential sources of contamination ι. known and potential receptors limits of excavation m. 2. Site Background ٨. General Site Information site description, including features like: 1. - number of tanks/containers - volume/size of tanks/containers - tank/container contents, past and present tank/container age, installation dates - tank/container construction materials presence and type of leak detection - presence and type of secondary containment general site construction history 2. 3. any past reports of spills, or other incidents 4. periods of nonoperation 5. proximity of sensitive sites such as schools, homes, private or public wells, etc. в. ____ Description of Discharge Incident 1. type of hazardous substances discharged, known or suspected (released, spilled, lost, etc.)

- 2. approximate amounts discharged
- 3. location of impact
- 4. dates of discharge
- 5. local problems associated with discharge, e.g. vapors in homes, well contamination, etc.
- 6. known receptors

c. Impacts

- 1. existing impacts to human health, safety, welfare and the environment
 - 2. any impacts to adjacent or nearby buildings, wells or other structures
 - 3. names and addresses of owners of adjacent properties, if those properties have been adversely impacted by the hazardous substance discharge
- Ð. Past Activities, Monitoring and Testing
 - 1. dates of site activities, duration and type and potential amounts of discharges
 - description of emergency actions taken and of interim actions taken, including dates 2.
 - 3. record of activities conducted at the site which had potential to cause contamination
 - 4. inventory record system data 5.
 - summary of monitoring results, including:
 - product monitoring records according to ILHR 10
 - groundwater monitoring
 - surface water monitoring
 - soil monitoring
 - sediment monitoring
 - atmospheric monitoring
 - 6. records of testing, repair, removal or replacement, including dates
 - 7. tank/container/line integrity testing
 - method
 - testing firm dates
 - results

Ε. **Hazardous Waste Generation**

- 1. hazardous waste manifest
- 2. was hazardous waste ever generated or stored on site?

Description of Tank/Container and Soil Removal Activities F. description of soil conditions in the area of the tank/container excavation or in area of 1. discharge volume of (contaminated) soils removed from the excavation 2. 3. location of stockpiled contaminated soils type of impermeable base for stockpiled soils 4. type of impermeable cover for stockpiled soils 5. if excavation was backfilled, what was used as fill? 6. 7. final deposition of soil excavated, where and how were they used? (daily cover, backfill on/off site, roasted, buried, etc.) 8. condition of tanks, lines, pumps (corrosion, visible leaks, etc?) 9. product (other than petroleum) or waste delivery or storage systems G. Land Use Information current and past land uses of site and neighboring properties 1. 2. description of zoning of property and adjacent properties 3. Environmental Analysis Ά. Site Historical Significance impacts or potential impacts to significant historical or archeological features due to any 1. response activities or the discharge itself 2. presence of buildings greater than 50 years old on or next to discharge site 8. Presence of "Sensitive" Environmental Receptors wildlife habitat 1. state or federal threatened or endangered species 2. 3. sensitive or unique ecosystems or species 4. areas of special natural resource interest 5. other surface waters and wetlands, as appropriate Geology (use maps as appropriate) geologic origin, nature and distribution of bedrock 1. 2. geologic origin, nature and distribution of overlying soils 3. thicknesses of various strata (consolidated and unconsolidated) 4. depth to bedrock 5. geophysical characteristics 6. soil types and texture 7. soil descriptions to include: - structure mottling - voids layering lenses geologic origin - Unified Soil System Classification - grain size distribution, if applicable - evidence of secondary permeability - odor, if evident staining, if evident 8. bedrock descriptions, if impacted: - rock type grain size - bedding thickness presence of fractures orientation of fractures - sedimentary structures - secondary porosity/solutional features - other 9. topography 10. site hydrology, including - intermittent and ephemeral streams, - drain tile systems, surface waters - wetlands - location of floodway and floodplain (this may be best located on a site map) D. No RSL result for: Asbestos; Bacteria; 1,3-DCB; Hydrogen Sulfide; Nitrate/Nitrite; Tetrahydrofuran; Perchlorate. Only use DAF=2 (or site-specific DAF) RCL <u>after</u> clearly defining gw plume. RCL < 0.0001 ppm is in "E" notation. Residential setting. Not-To-Exceed D-C RCLs from web-calculator at: http://epa-prgs.ornl.gov/cgi-bin/chemicals/csl_search (Chicago as climatic zone). = cancer; nc = non-cancer; Csat = soil saturation concentration; ceiling = 10%.

-----> If web-calculator result or Csat exceeds 10% by weight (the ceiling limit concentration defined in RSL Users Guide), Not-to-Exceed D-C RCL defaults to 100,000 ppm.

1. Enter data in yellow cells. Numeric only values under "INPUT Site Data." For ND, use detection limit. Do not type '-', 'NA' nor 'space bar.' Leave purple cells "as is."

2. After completing data entry, See Summary in Row 872.

Subchapter II — Groundwater Quality Standards

NR 140.10 Public health related groundwater standards. The groundwater quality standards for substances of public health concern are listed in Table 1.

Note: For all substances that have carcinogenic, mutagenic or teratogenic proper-ties or interactive effects, the preventive action limit is 10% of the enforcement stan-dard. The preventive action limit is 20% of the enforcement standard for all other substances that are of public health concern. Enforcement is standard but an only action limits for additional substances will be added to Table I as recommendations are developed pursuant to ss. 160.07, 160.13 and 160.15, Stats.

Substance ¹	Enforcement Standard (micrograms per liter – except as noted)	Preventive Action Limit (microgram per liter – except as noted)

¹ Appendix 1 contains Chemical Abstract Service (CAS) registry numbers, common synonyms and trade names for most substances listed in T able 1.

² Total chlorinated atrazine residues includes parent compound and the following metabolites of health concern: 2-chloro-4-amino-6-isopropylamino-s-triazine (formerly deethylatrazine), 2-chloro-4-amino-6-ethylamino-s-triazine (formerly deisopropylatrazine) and 2-chloro-4,6-diamino-s-triazine (formerly diaminoa-trazine).

³ Total coliform bacteria may not be present in any 100 ml sample using either the membrane filter (MF) technique, the presence-absence (P-A) coliform test, the minimal medium ONPG-MUG (MMO-MUG) test or not present in any 10 ml portion of the 10-tube multiple tube fermentation (MTF) technique.

* Cyanide, free" refers to the simple cyanides (HCN, CN⁻) and /or readily dissociable metal-cyanide complexes. Free cyanide is regulatorily equivalent to cyanide quantified by approved analytical methods for "amenable cyanide" or "available cyanide".

³ Dinitrotoluene, Total Residues includes the dinitrotoluene (DNT) isomers: 2,3-DNT, 2,4-DNT, 2.5-DNT, 2,6-DNT, 3,4-DNT and 3,5-DNT.

"Xylene includes meta-, ortho-, and para-xylene combined.

NR 140.14 Statistical procedures. (1) If a preventive action limit or an enforcement standard for a substance listed in Table 1 or 2, an alternative concentration limit issued in accordance with s. NR 140.28 or a preventive action limit for an indicator parameter established according to s. NR 140.20 (2) is attained or exceeded at a point of standards application:

(a) The owner or operator of the facility, practice or activity at which a standard is attained or exceeded shall notify the appropriate regulatory agency that a standard has been attained or exceeded; and

(b) The regulatory agency shall require a response in accordance with the rules promulgated under s. 160.21, Stats. No response shall be required if it is demonstrated to the satisfaction of the appropriate regulatory agency that a scientifically valid determination cannot be made that the preventive action limit or enforcement standard for a substance in Table 1 or 2 has been attained or exceeded based on consideration of sampling procedures or laboratory precision and accuracy, at a significance level of 0.05.

(2) The regulatory agency shall use one or more valid statistical procedures to determine if a change in the concentration of a substance has occurred. A significance level of 0.05 shall be used for all tests.

(3) In addition to sub. (2), the following applies when a preventive action limit or enforcement standard is equal to or less than the limit of quantitation:

(a) If a substance is not detected in a sample, the regulatory agency may not consider the preventive action limit or enforcement standard to have been attained or exceeded.

(b) If the preventive action limit or enforcement standard is less than the limit of detection, and the concentration of a substance is reported between the limit of detection and the limit of quantitation, the regulatory agency shall consider the preventive action limit or enforcement standard to be attained or exceeded only if:

1. The substance has been analytically confirmed to be present in the same sample using an equivalently sensitive analytical method or the same analytical method, and

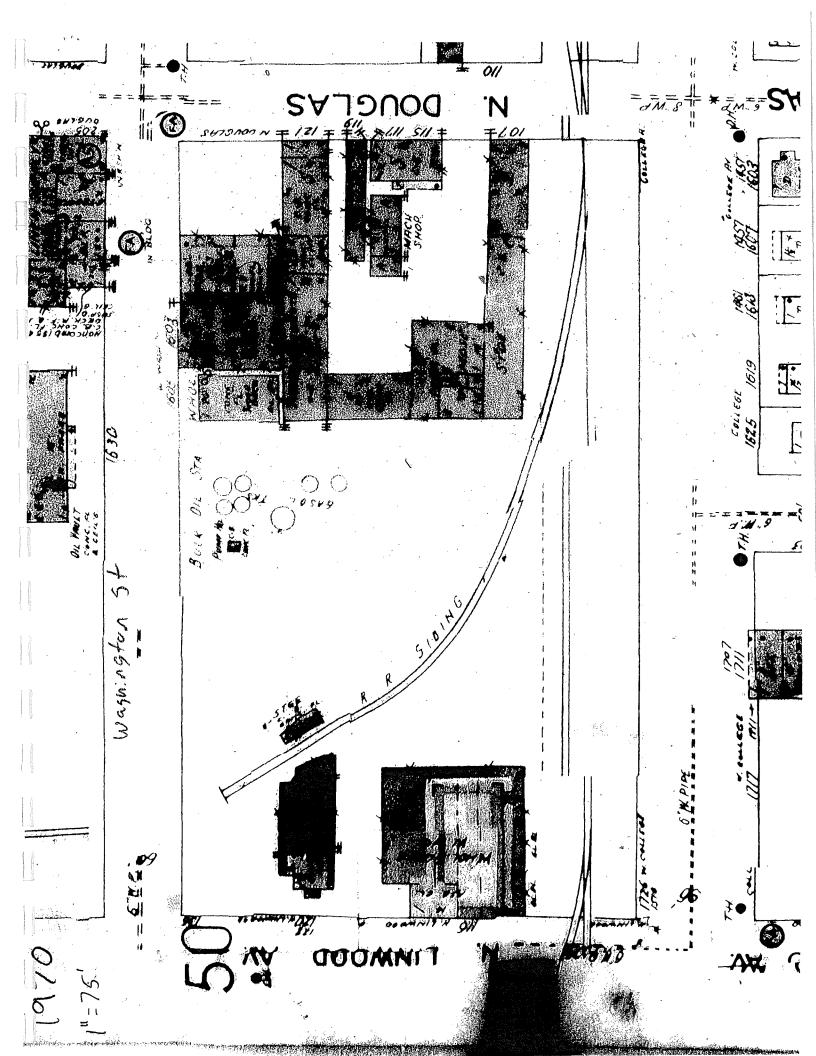

2. The substance has been statistically confirmed to be present above the preventive action limit or enforcement standard, determined by an appropriate statistical test with sufficient samples at a significance level of 0.05.

(c) If the preventive action limit or enforcement standard is between the limit of detection and the limit of quantitation, the regulatory agency shall consider the preventive action limit or

Mr. Clarence Korth Korth Upholstery Co. 1629 W. Washington Street Appleton, Wisconsin 54914

RE: Summary of results from Soil Boring Investigation EA Project #: 10036000495

Dear Mr. Korth;

This letter is to inform you of the results of the soil boring investigation performed by Environmental Assessments, Inc. on April 20, 1995.

The observations that were made during the investigation are:

- Soil contamination was evident in the backfill material of the former tankpit. This backfill material consists of well graded sand. Contamination appears to extend from approximately three feet below grade to approximately fifteen below grade.
- Groundwater was encountered at approximately four to six feet below grade and appears to be impacted.
- Laboratory analytical results from the soil sample indicated that contamination was present above Wisconsin Department of Natural Resources (WDNR) guidelines for site investigations of 10 parts per million (ppm) but below guidelines for closure of 250 ppm. Analytical results are presented in Table I. Chain of Custody documentation and laboratory data sheets are located in Attachment 1.

Based on the results of the soil boring investigation, Environmental Assessments, Inc., recommends that a site investigation be conducted in order to define the degree and extent of contamination. Following completion of the investigation, a remedial action plan (RAP) will be developed and implemented to bring soil and groundwater contamination below WDNR preventative action limits (PALs).

TABLE ISOIL SAMPLING RESULTS

It is not yet known whether this site is eligible for clean-up funds from the state (PECFA). As per our conversation, I have included information which explains the steps we need to follow in order to confirm eligibility and to remain in compliance with NR 700 guidelines.

I will also be soliciting bids for consulting services at your site. Please retain copies of those bids, as well as ours, for your records. Enclosed you will find two original copies of our proposal for a Contamination Investigation and Remedial Action Plan. Please sign, date and send us on of the originals in the enclosed envelope.

If you have any further questions regarding this letter, please feel free to contact me at (414) 749-9746.

Sincerely, ENVIRONMENTAL ASSESSMENTS, INC

NARRATIVE

This narrative is relevant to sample GP 1-15.

The sample was analyzed for petroleum volatile organic compounds following SW-846 Method 8020.

The following is a summary of the quality control results:

- 1. The reported compounds were not detected in the method blank.
- 2. The precision between the matrix spike recovery and the matrix spike duplicate recovery was within laboratory limits for each of the four compounds spiked.
- 3. The matrix spike and matrix spike duplicate recoveries were within laboratory limits for each of the four compounds spiked.
- 4. The surrogate recovery was within laboratory limits.
- 5. The initial check standard verified the calibration curve for each of the reported compounds.
- 6. The results were confirmed by SW-846 Method 8260.

NARRATIVE

This narrative is relevant to sample GP 1-15.

The sample was analyzed for polynuclear aromatic hydrocarbons following SW-846 Method 8310.

The sample used for the matrix spikes was not included on this narrative. The following is a summary of the quality control results:

- 1. The reported compounds were not detected in the method blank.
- 2. The precision between the matrix spike recovery and matrix spike duplicate recovery was within laboratory limits for each of the reported compounds.
- 3. The matrix spike recovery was within laboratory limits for each of the reported compounds.
- 4. The matrix spike duplicate recovery was within laboratory limits for each of the reported compounds.
- 5. The surrogate recovery was within laboratory limits.
- 6. The initial and final check standards verified the calibration curve for each of the reported compounds.

State of Wisconsin \ DEPARTMENT OF NATURAL RESOURCES

Lake Michigan District Headquarters Solid & Hazardous Waste Program 1125 N. Military Avenue, PO Box 10448

Green Bay, WI 54307-0448

TELEPHONE: (414)492-5916 TELEFAX: (414)492-5859

George E. Meyer, Secretary William R. Selbig, District Director

June 5, 1995

Mr. Clarence Korth 1629 W. Washington Street Appleton, WI 54914

> SUBJECT: Petroleum Contamination from Underground Storage Tank System Korth Upholstery, 1629 W. Washington Street, Appleton WDNR LUST ID #45-2078

Dear Mr. Korth:

On May 3, 1995, the Department of Natural Resources (DNR) was notified by Victoria Flowers of Environmental Assessments that petroleum contamination was discovered during a site assessment performed at the above-referenced location.

Based on the information received by the DNR, we believe you are responsible for restoring the environment at this site under Section 144.76, Wisconsin Statutes (hazardous substances spills law). This responsibility includes first investigating the extent of the contamination, then selecting and implementing the most appropriate remedial action. Enclosed is information to help you understand what you need to do to ensure your compliance with the spills law.

The purpose of this letter is threefold: (1) to describe your legal responsibilities; (2) to explain what you need to do to investigate and clean up the contamination; and (3) to provide you with information about cleanups, environmental consultants, and working cooperatively with the DNR.

Legal Responsibilities:

Your legal responsibilities are defined both in statute and administrative code. The hazardous substances spill law, Section 144.76(3) Wisconsin Statutes, states:

RESPONSIBILITY. A person who possesses or controls a hazardous substance which is discharged or who causes the discharge of a hazardous substance shall take the actions necessary to restore the environment to the extent practicable and minimize the harmful effects from the discharge to the air, lands, or waters of the state.

Wisconsin Administrative Codes NR 700 through NR 728 establish requirements for emergency and interim actions, public information, site investigations, design and operation of remedial action systems, and case closure. Chapter NR 708 include provisions for immediate actions in response to limited contamination. Wisconsin Administrative Code NR Mr. Clarence Korth - June 5, 1995

140 establishes groundwater standards for contaminants that reach groundwater.

Steps to Take:

The longer contamination is left in the environment, the farther it can spread and the more it may cost to clean up. Quick action may lessen damage to your property and to neighboring properties and reduce your costs in investigating and cleaning up the contamination. To ensure that your cleanup complies with Wisconsin's laws and administrative codes, you should hire a professional environmental consultant who understands what needs to be done. These are the first four steps to take:

- 1. By July 10, 1995, please submit <u>written</u> verification (such as a letter from the consultant) that you have hired an environmental consultant (we would like a contact name, mailing address and phone number). You will need to work quickly to meet this timeline.
- 2. By August 10, 1995, your consultant must submit a workplan and a schedule for conducting the investigation. The consultant must follow the Department's administrative codes and our technical guidance documents. Please include with your workplan a copy of any previous information that has been completed for your site (such as an underground tank removal report or a preliminary soil excavation report).
- 3. Please keep us informed of what is being done at your site. You or your consultant must provide us with a <u>brief</u> report at least every 90 days starting after your workplan is submitted. These quarterly reports should summarize the work completed since the last report. Quarterly reports need only include one or two pages of text, plus any relevant maps and tables. Should conditions at your site warrant, you may receive a letter requiring more frequent contacts with the Department. You will also receive an annual site status report form in February.
- 4. When the site investigation is complete, your consultant must submit a full report on the extent and degree of soil and groundwater contamination and a proposal for cleaning up the contamination.

Due to the number of contaminated sites and our staffing levels, we will be unable to respond to each report. To maintain your compliance with the spills law and chapters NR 700 through NR 728, do not delay the investigation and cleanup by waiting for DNR responses. We have provided detailed technical guidance to environmental consultants. Your consultant is expected to be familiar with our technical procedures and administrative codes and should be able to answer your questions on meeting Wisconsin's cleanup requirements.

Though a WDNR project manager has not been assigned to this case, your correspondence and reports regarding this site should be sent to the Department at the following address:

Wisconsin Department of Natural Resources Attn: Thomas Verstegen (414-424-7887) 905 Bayshore Drive, Box 2565 Oshkosh, WI 54903 Mr. Clarence Korth - June 5, 1995

Unless otherwise requested, <u>please send only one copy of all plans and reports</u>. Correspondence and reports should be identified with the assigned WDNR LUST ID number, which can be found on the first page of this letter.

Information for Site Owners:

Enclosed is a list of environmental consultants and some important tips on selecting a consultant. If you are eligible for reimbursement of costs under Wisconsin's PECFA program (see last paragraph), you will need to compare at least three consultants' proposals before hiring a consultant. Consultants and laboratories working in the PECFA program are required to carry errors and omissions insurance to help protect you against unsuitable work. Also enclosed are materials on controlling costs, understanding the cleanup process, and choosing a site cleanup method. This information has been prepared to help you understand your responsibilities and what your environmental consultant needs to do. Please read this information carefully.

If you are interested in obtaining the protection of limited liability under s. 144.76, Statutes, please contact Mark Giesfeldt (608-267-7562) or Darsi Foss (608-267-6713) in the DNR's Madison office for more information. The liability exemption under s. 144.765, Statutes, is available to persons who meet the definition of "purchaser" in s. 144.765(1)(c) and receive Department approval for the response actions taken at the property undergoing cleanup. The Department will determine eligibility for this program on a case-by-case basis, prior to the "purchaser" developing a scope of work for conducting a ch. NR 716 site investigation at the property.

Financial Information:

Reimbursement from the Petroleum Environmental Cleanup Fund (PECFA) is available for the costs of cleaning up contamination from eligible petroleum storage tanks. The fund is administered by the Department of Industry, Labor & Human Relations (DILHR). Please contact DILHR at (608) 266-2424 for more information on eligibility and regulations for this program.

Thank you for your cooperation. If you have any questions about this letter or your responsibilities, please call me at (414) 492-5878.

Sincerely,

anis DeBrock

Work Zones

Support Zone: Beyond a 25 foot radius of drilling or excavation and upwind of operation. Contamination Reduction Zone: Between 15 and 25 foot radius of drilling or excavation. Exclusion Zone: Within 15 foot radius of of drilling or excavation.

Site Entry Procedure: Obtain all approval and instructions from project manager.

Decontamination Procedures:

Personnel: Remove protective equipment and wash hands prior to eating. Equipment: Wash with brush and Alconox soap, rinse with fresh tap water.

Investigation Derived Material Disposal:

Stockpiling: The soils will be placed on and covered with plastic. The client will determine the stockpile location, but will have to be approved by the project manager. Soils will be disposed of by the most efficient and cost effective approved method.

DOT drums: Label drums as to content and date filled. Routinely inspect drums for leakage or spills. Place together in area where movement is at minimum.

Work Limitations: Daylight hours. No eating, drinking, or smoking in the exclusion zone or contamination reduction zone.

Employee Limitations:

Site Resources:

Shower

Water Supply

APPENDIX G/QUALIFICATIONS

Ronald J. Anderson, P.G.

Professional Titles

- Senior Hydrogeologist
- Project Manager

Credentials

- Licensed Professional Geologist in Wisconsin
- Licensed Professional Geologist in Minnesota
- Recognized by the State of Wisconsin Department of Natural Resources (Chapter NR712) as a qualified Hydrogeologist
- · Certified by State of Wisconsin to conduct PECFA-funded LUST projects
- Certified tank closure site assessor (#41861) in Wisconsin
- Member of the Wisconsin Groundwater Association
- Member of the Minnesota Groundwater Association
- · Member of the Federation of Environmental Technologist, Inc.

Education

Includes a BA in Earth Science from the University of Minnesota-Duluth. Applicable courses successfully completed include Hydrogeology, Applied Hydrogeology, Environmental Geology, Geological Field Methods, Geology Field Camp, Geomorphology, Structural Geology, Stratigraphy/Tectonics, Mineralogy/Petrology, Glacial/Quaternary Geology, Geology of North America, Oceanography, General Chemistry, Organic Chemistry, and Environmental Conservation

Post-Graduate Education

Includes Personnel Protection and Safety, Conducting Comprehensive Environmental Property Assessments, Groundwater Flow and Well Hydraulics, Effective Techniques for Contaminated Groundwater Treatment, and numerous other continuing education classes and conferences.

Work Experience

Includes nine months with the Wisconsin Department of Natural Resources Leaking Underground Storage Tank Program regulating LUST sites and since June 1990, with METCO as a Hydrogeologist and Project Manager. Duties have included: managing, conducting, and reporting tank closure assessments; property assessment, LUST investigations; spill investigations; agricultural chemical investigations, dry cleaning chemical investigations, general geotechnical/environmental investigations; Geoprobe projects (soil, groundwater, soil gas sampling); drilling projects (soil boring and monitoring wells); and remedial projects. Since 1989, METCO has sampled/consulted over 1,465 environmental sites.

Jason T. Powell

Professional Title

Staff Scientist

Credentials

 Recognized by the State of Wisconsin Department of Natural Resources (Chapter NR712) as a qualified Scientist.

Education

Includes a BS in Groundwater Management from the University of Wisconsin- Stevens Point. Applicable courses successfully completed include Hydrogeology, Applied Hydrogeology, Environmental Geology, Hydrogeology-Groundwater Flow Modeling, Groundwater Management, Structural Geology, Mineralogy, Glacial Geology, Soils, Soil Physics, Hydrology, Geochemistry, Water Chemistry, Organic Chemistry, General Chemistry, Environmental Issues.

Post-Graduate Education

40-hour OSHA Hazardous Materials Safety Training course with 8-hour refresher course.

Work Experience

With METCO since May 1992 as a Geoprobe Assistant and Geoprobe Operator. In June 1995 to July 1996 as a Environmental Technician. In July 1996 as a Staff Scientist. Duties have included: LUST investigations; general geotechnical/environmental investigations; Geoprobe projects (soil, groundwater sampling); drilling projects (soil boring and monitoring wells); remedial projects (sampling, pilot tests, system operation/maintenance) and project management.

Eric J. Dahl

Professional Title

Hydrogeologist

Credentials

- Recognized by the State of Wisconsin Department of Natural Resources (Chapter NR712) as a qualified Hydrogeologist.
- Registered through the Wisconsin Department of Safety and Professional Services as a PECFA consultant (#823519).

Education

Includes B.S. in Geology from the University of Wisconsin-Eau Claire. Applicable courses successfully completed include Environmental Geology, Physical Hydrogeology, Chemical Hydrogeology, Computer Modeling in Hydrogeology, Aqueous Geochemistry, Field Geology I and II, Mineralogy and Petrology I and II, Sedimentology and Stratigraphy, Petroleum and Economic Geology, Earth Resources, Earth History, and Structural Geology.

Post-Graduate Education

40-hour OSHA Hazardous Materials Safety Training course with 8-hour refresher course.

Work Experience

With METCO since November 1999 as a Hydrogeologist. Duties have included: Site Investigations, Phase I and Phase II Environmental Site Assessments, Case Closure Requests/GIS Registry, Geoprobe projects (oversight, direction, and sampling), drilling projects/monitoring well installation (oversight, direction, and sampling), soil excavation projects (oversight, direction, and sampling), Geoprobe operation, and operation and maintenance of remedial systems.

Thomas P. Pignet, P.E.

Professional Titles

- Chemical Engineer
- Industrial Engineer

Credentials

Licensed Professional Engineer in Wisconsin

Education

Undergraduate: B.S. in Chemical Engineering from the University of Wisconsin. Applicable courses include the standard chemistry curriculum - basic, physical, organic, etc. - plus engineering transport phenomena, chemical unit operations (e.g. separations), fluid mechanics, etc.

Post-Graduate Education

Ph.D. in Chemical Engineering from the University of Minnesota - with applicable special training in absorption & catalysis; M.S. in Industrial Engineering from the University of Wisconsin - Milwaukee - with special emphasis on statistical techniques and data analysis. Applicable further training: continuing education, semester-length courses in [1] Understanding Environmental & Safety Regulation; [2] Hazardous & Toxic Waste Management; plus a number of 1-2 day workshops - Fire & Explosion Safety; Small Quantity Generations of Hazardous Waste.

Work Experience

Includes ten years as a research chemical engineer with a large chemical manufacturer; one year as process development engineer and demonstration-scale test analyst on a unique coal gasification project; ten years in association with UW-M, teaching and consulting to industry on energy efficiency, waste minimization and productivity improvement. One year working with a small engineering consulting firm on energy, environmental, and process improvement projects, including LUST Investigations and Remediations. With METCO since February 2000. Duties include Remedial Action Plan preparation, pilot test design and performance, remedial systems design and implementation, and general management of METCO's remedial projects.

Jon Jensen

Professional Title

Staff Scientist

Credentials

 Registered through the Wisconsin Department of Safety and Professional Services as a PECFA consultant (#1294924).

Education

Includes B.S. in Geography with and Environmental Science minor from University of Wisconsin – La Crosse: Applicable courses successfully completed include Interpretation of Aerial Photographs, Intro to GIS, Advanced Remote Sensing, Fundamentals of Cartography, Biogeography, and Conservation of Global Environments.

Work Experience

With METCO since July, 2014 as Staff Scientist. Duties include: soil and groundwater sampling, operation and maintenance of remedial systems, Geoprobe projects (oversight, direction, and sampling), site mapping, data reduction and analysis, and reporting.

Matthew C. Michalski

, i²

Professional Title

Hydrogeologist

Credentials

- Registered through the Wisconsin Department of Safety and Professional Services as a PECFA consultant (#1261443).
- Member of the Wisconsin Groundwater Association
- · Member of the Minnesota Groundwater Association
- Member of the National Groundwater Association
- · Member of the American Institute of Professional Geologist
- · Member of the Geological Society of America

Education

Includes B.S. in Geology with an emphasis in Hydrogeology and Water Chemistry from the University of Wisconsin-Eau Claire, completion of Western Michigan University's Hydrogeology Field Camp, a B.S. In Geography from the University of Wisconsin-La Crosse. Applicable courses successfully completed include Hydrogeology, Contaminant Hydrogeology, Aqueous Geochemistry, Geomorphology and Aerial Photograhy interpretation, Sedimentology and Stratigraphy, Structural Geology, Mineralogy and Petrology, Hazardous Waste Operation and Emergency Response, Surface Geophysics, Principles and Practices of Groundwater Sampling and Monitoring, Principles and Practices of Aquifer Testing, Principles of Well Drilling and Installation, Remediation Design and Implementation, Water Resources, Environmental Hazards and Land Use, and Advanced Map Design.

Post-Graduate Education

40-hour OSHA Hazardous Materials Safety Training course.

Work Experience

With METCO since May 2016 as a Hydrogeologist and from August 2012 to August 2014 as a Staff Scientist. Duties have included: soil and groundwater sampling, Site Investigations, Phase I and Phase II Environmental Site Assessments, Case Closure Requests/GIS Registry, Geoprobe projects (oversight, direction, and sampling), drilling projects/monitoring well installation (oversight, direction, and sampling), and operation and maintenance of remedial systems, site mapping, data reduction and analysis, and reporting.

Bryce Kujawa

Professional Title

Staff Scientist

Credentials

- Registered through the Wisconsin Department of Safety and Professional Services as a PECFA consultant (#17138).
- Member of the Geological Society of America

Education

Includes B.S. in Geology from the University of Wisconsin-Eau Claire. Applicable courses successfully completed include Hydrogeology, Contaminant Hydrogeology, Field Geology I and II, Mineralogy and Petrology I and II, Sedimentology and Stratigraphy, Petroleum and Economic Geology, Earth History, Physical Geology, Structural Geology, Computers in Geology, Geographic Informational Systems, Global Environmental Change, and General Chemistry.

Work Experience

With METCO since June, 2016 as Staff Scientist. Duties include: soil and groundwater sampling, operation and maintenance of remedial systems, Geoprobe projects (oversight, direction, and sampling), site mapping, data reduction and analysis, and reporting.

LIST OF ACRONYMS

AST - Aboveground Storage Tank

ASTM - American Society for Testing and Materials

Cd - Cadmium

DOT - Department of Transportation

DRO - Diesel Range Organics

ES - Enforcement Standards

gpm - gallons per minute

GRO - Gasoline Range Organics

HNU - brand name for Photoionization Detector

ID - inside-diameter

LAST - Leaking Aboveground Storage Tank

LUST - Leaking Underground Storage Tank

MSL - Mean Sea Level

MTBE - Methyl-tert-butyl ether

MW - Monitoring Well

NIOSH - National Institute for Occupational Safety & Health

NR - Natural Resources

OD - outside-diameter

PAH - Polynuclear Aromatic Hydrocarbons

PAL - Preventive Action Limits

Pb - Lead

PECFA - Petroleum Environmental Cleanup Fund

PID - Photoionization Detector

POTW - Publicly Owned Treatment Works

ppb ug/kg - parts per billion

ppm mg/kg - parts per million

psi - pounds per square inch

PVC - Polyvinyl Chloride

PVOC - Petroleum Volatile Organic Compounds

RAP - Remedial Action Plan

scfm - standard cubic feet per minute

SVE - Soil Vapor Extraction

USCS - Unified Soil Classification System

USGS - United States Geological Survey

UST - Underground Storage Tank

VOC - Volatile Organic Compounds

WDNR - Wisconsin Department of Natural Resources

WPDES - Wisconsin Pollutant Discharge Elimination System
