Re: Work Plan for Completing the Site Investigation
Subject Sites: University Cleaners Former University Cleaners
 1608 University Avenue 1620 University Avenue
 Green Bay, WI 54302 Green Bay, WI 54302
 BRRTS Case No. 02-05-233555 BRRTS Case No. 02-05-321297

Dear Ms. Du Fresne:

On behalf of Mr. David Charles, RP for the above referenced DERF sites, we are providing this Work Plan for completing the Site Investigation at the subject sites pursuant to our telephone conversation on December 19, 2003. The Work Plan is submitted to comply with the requirements of NR 169.09(c)(4) of the Wisconsin Administrative Code. The Work Plan outlines the work that will be performed to complete the investigation to define the degree and extent of the chlorinated solvent contamination in the soil and groundwater at the subject sites. At the completion of the work, we will submit a revised Site Investigation Report (SIR)/Remedial Action Options Report (RAOR) that will supply the findings of the investigation and will evaluate the appropriate remedial actions for the sites and recommend a remedial action to be taken at the sites.

Site Description and Background

The sites are located at 1608 and 1620 University Avenue in the City of Green Bay, Brown County, Wisconsin. Figure No. 1 – *Site Location Map*, provided in Attachment “A” – *Figures & Maps*, details the location of the subject sites in the City of Green Bay. Figure No. 2 – *Site Plan*, included in Attachment “A”, details the general layout of the subject properties.

The 1608 University Avenue site is currently being used as a dry cleaning operation. The dry cleaning operation is a licensed facility. The dry cleaning business was previously located at 1620 University Avenue before relocating to 1608 University Avenue. The 1620 University Avenue site closed prior to October 1997. The 1620 University Avenue site was never licensed.

In addition, a Standard Gasoline Station once operated from the 1608 University Avenue site. An UST system was located at the Standard Station to store gasoline for retail sale.

Ms. Du Fresne
January 16, 2004
Page 2

The petroleum contamination resulting from the activities at the Standard Station was investigated under WDNR BRRTS Case No. 03-05-216499.

In February 1999, Northern Environmental completed a limited Phase II ESA at the subject sites to determine the impact the former UST storage tank system and the dry cleaners had on the subject sites. According to Northern Environmental's *Site Investigation Status Update, Chlorinated Solvent Release, University Cleaners, 1608 and 1620 University Avenue* dated February 10, 2000, the results of the Phase II ESA identified petroleum and solvent contamination in the groundwater at the sites to-date.

Northern Environmental was retained by Ms. Gale Charles, the former owner of the subject sites, to investigate the contamination discovered at the subject sites. As part of that work, Northern Environmental conducted fifteen soil borings at the sites. Six of the borings were converted into groundwater monitoring wells and one soil boring was converted into a piezometer.

Current Responsible Party

The current responsible party for the sites is the current owner of the property. The current property owner is Mr. David Charles. Mr. Charles' mailing address and telephone number are provided below:

Responsible:	Mr. David Charles
Address:	1740 Cofrin Drive Suite 2 Green Bay, WI 54302
Phone Number:	(920) 432-5777

Consultant

MMA, INC. has been retained by Mr. Charles to prepare a Work Plan for completing the investigation, determine the degree and extent of contamination, identify the most cost effective means to clean-up the contamination and to oversee the clean-up of the properties.

John M. Maas, P.E. is the Project Manager for the investigation. Mr. Maas has more than 25-years consulting experience in environmental engineering, natural resources and related fields.

Discovery of Contamination

Contamination was discovered by Northern Environmental during the limited Phase II ESA activities. On March 22, 1999, Northern Environmental reported the discovery of contamination via fax to Ms. Janis DeBrock of the WDNR.

The WDNR issued a RP letter to Ms. Gale Charles, the former owner of the subject site, which outlined her responsibility to investigate and restore the environment to the extent practicable. A divorce settlement between Mr. and Mrs. Charles transferred the property ownership and responsibility for clean-up of the site to Mr. David Charles.

Summary of the Investigation Completed To-Date

As previously mentioned, Northern Environmental conducted approximately fifteen soil borings and installed a number of monitoring wells at the 1608 and 1620 University Avenue sites as part of the Phase II Environmental Site Assessment (ESA) and Site Investigation. In addition, MMA, INC. conducted thirty-two geoprobe borings and installed five additional monitoring wells at the site as part of completing the solvent and petroleum investigations at the sites.

Table No. 1 – *Analytical Results for Soil Samples*, provided in Attachment “B”, summarizes the analytical results of the soil samples collected and analyzed to-date as part of the ESA and investigation conducted by Northern Environmental and MMA, INC. at the subject sites. Table No. 2 – *Analytical Results for Groundwater Samples*, provided in Attachment “B”, summarizes the results for the groundwater samples collected and analyzed to-date as part of the ESA and investigation conducted by Northern Environmental and MMA, INC. at the subject sites.

Figure No. 3 – *Areal Extent of Soil Contamination*, included in Attachment “A”, details the current degree and extent of soil contamination identified to exist at the subject sites.

Figure No. 4 – *Areal Extent of Groundwater Contamination*, included in Attachment “A”, details the current degree and extent of groundwater contamination identified to exist at the subject sites. Table No. 3 – *Groundwater Measurements and Elevations*, included in Attachment “B”, summarizes the groundwater measurements collected at the site. Figure No. 5 – *Groundwater Contours and Elevations*, included in Attachment “A”, details the groundwater contours at the site on November 21, 2003.

Scope of Additional Investigation

MMA, INC. will complete the investigation by installing monitoring wells at the following locations:

- To the northeast of MW500, across University Avenue.
- To the south of GP-8.
- To the southwest of GP-28 and GP-29, across the railroad tracks.

- To the east of GP-30, on American Food Groups property.
- To the south of GP-22.
- Between GP-6 and GP-19.
- In addition, a piezometer will be installed to the southwest of GP-28 and GP-29, across the railroad tracks.

Two rounds of groundwater sampling will be collected from each of the newly installed and existing monitoring well locations. Once the results of the groundwater samples are available, MMA, INC. will provide the WDNR with a letter report summarizing the findings of the additional investigation.

Figure No. 6 – *Proposed Monitoring Well and Piezometer Locations*, included in Attachment “A,” details the proposed locations for the monitoring wells and piezometer at the subject sites.

Soil Sampling

No soil samples will be conducted during this phase of the investigation.

Monitoring Well Construction

The monitoring well will be constructed using 2-inch Schedule 40 PVC with threaded joints. The monitoring wells are screened via a 5-foot length of manufactured well screen slotted (0.01-inch slots). The annulus of the wells will be filled with flint silica sand to four-feet above the screen. The remainder of the annulus of the well will be filled with medium bentonite chips. The monitoring well will be constructed with flush mount protectors.

The well will be constructed to intersect the water table on the well screen at the time of installation. It will be constructed and developed in accordance with NR 141 of the Wisconsin Administration Code.

The spoils from the investigation and any decontamination water will be placed in 55-gallon steel drums (conforming to DOT 17H requirements) and stored on-site until disposal can be arranged.

Access Agreements

MMA, INC. will secure access agreements from the property owner located to the north, Canadian National Railroad and American Food Groups to install the monitoring wells and piezometer. These access agreements will be secured prior to beginning work at the property.

Cost Estimate

A cost estimate for the above-described services at 1608 University Avenue is provided below.

Environmental/Consulting Services	\$ 2,860.00
Prepare and Submit WP	\$ 350.00
Commodity Bidding Documents/Assistance	375.00
Obtain Access Agreements	450.00
Field Work	1,200.00
Equipment Rental	50.00
Letter Report to WDNR	435.00
Laboratory	1,200.00
Mobilization	250.00
Install MW-5	<u>800.00</u>
ESTIMATED SITE TOTAL	<u>\$5,110.00</u>

A cost estimate for the above-described services at 1620 University Avenue is provided below.

Environmental/Consulting Services	\$ 4,515.00
Prepare and Submit WP	\$ 350.00
Commodity Bidding Documents/Assistance	375.00
Obtain Access Agreements	1,000.00
Field Work	2,300.00
Equipment Rental	50.00
Letter Report to WDNR	440.00
Laboratory	1,500.00
Mobilization	250.00
Install Five MWs and One Piezometer	<u>4,950.00</u>
ESTIMATED SITE TOTAL	<u>\$11,215.00</u>

The estimate provided above includes the installation of six monitoring wells and one piezometer and two rounds of quarterly sampling of all wells.

Schedule

The investigation is scheduled to be conducted in late February or early March. The results of the two rounds of groundwater sampling will be presented in an update letter to the WDNR to be submitted in April, before we revise the SIR/RAOR. The goal is to complete the investigation this spring so remediation activities can take place this summer.

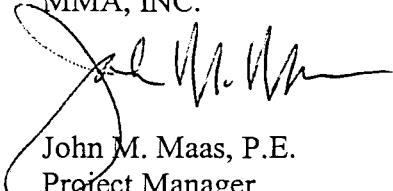

Ms. Du Fresne

DUP1 collected from GP-4

DUP2 collected from GP-16

DUP3 collected from PZ-2

DUP4 collected from MW-2

The methylene chloride detected in samples collected on November 21, 2003 is a laboratory contaminant. Methylene chloride was also detected in the trip blank.

J – Analyte detected between LOD and LOQ

Blank – Not analyzed for

Shaded – Significant results
