Subject: DNR Review of MMP for Installation of ChemDesign Water Line, Stanton Street Facility

Denice,

The DNR has reviewed the Wis. Admin Code NR 718 Material Management Plan submitted by Tyco on behalf of ChemDesign on February 13, 2024.

- 1. The request for a locational criteria exemption under Wis. Admin. Code § NR 718.12(1)(c) is granted.
- 2. The request to manage contaminated soil as backfill within the area from which it is excavated for the ChemDesign water line work is approved, per Wis. Admin. Code § NR 718.12(1)(d).
- 3. Best management practices for stormwater control must be implemented at the site to mitigate any releases of contaminated surface water to the environment.
- 4. Following work completion, documentation of the material management activities shall be provided. The documentation must describe how the activities complied with the approved management plan and must also comply with the requirements of Wis. Admin. Code § NR 724.15(3). Including, but not limited to:
 - a. Maps, drawings, and/or cross sections that depict how contaminated material was managed.
 - b. A synopsis of the work conducted and an explanation as to how it complied with the material management plan.
 - c. A description of any changes made to the planned management activity and an explanation as to why they were necessary for the project.
 - d. Any field observations or results of monitoring conducted during the management activity.
 - e. A description of how new site conditions are protective of human health, safety, welfare and the environment.
 - f. Fieldnotes.
 - g. Waste Characterization Lab Data.
 - h. Photo Logs.
 - i. Waste Manifest.

Thank you, Sarah

We are committed to service excellence.

Visit our survey at http://dnr.wi.gov/customersurvey to evaluate how I did.

MEMORANDUM

Date:	January 29, 2025	From:	Tom Willis, Director HES, Chem Design. c/o Endpoint Solutions						
RE:	ChemDesign Products Inc. Water Line Installation Project - Soil & Water Management								
To:	Sarah Krueger - Wisconsin Department of Natural Resources								
	Andrew Kleinberg – U.S. Environmental Protection Agency								
Address:	2984 Shawano Avenue								
	Green Bay, WI 54143-6727								
Project #:	732-003-001								

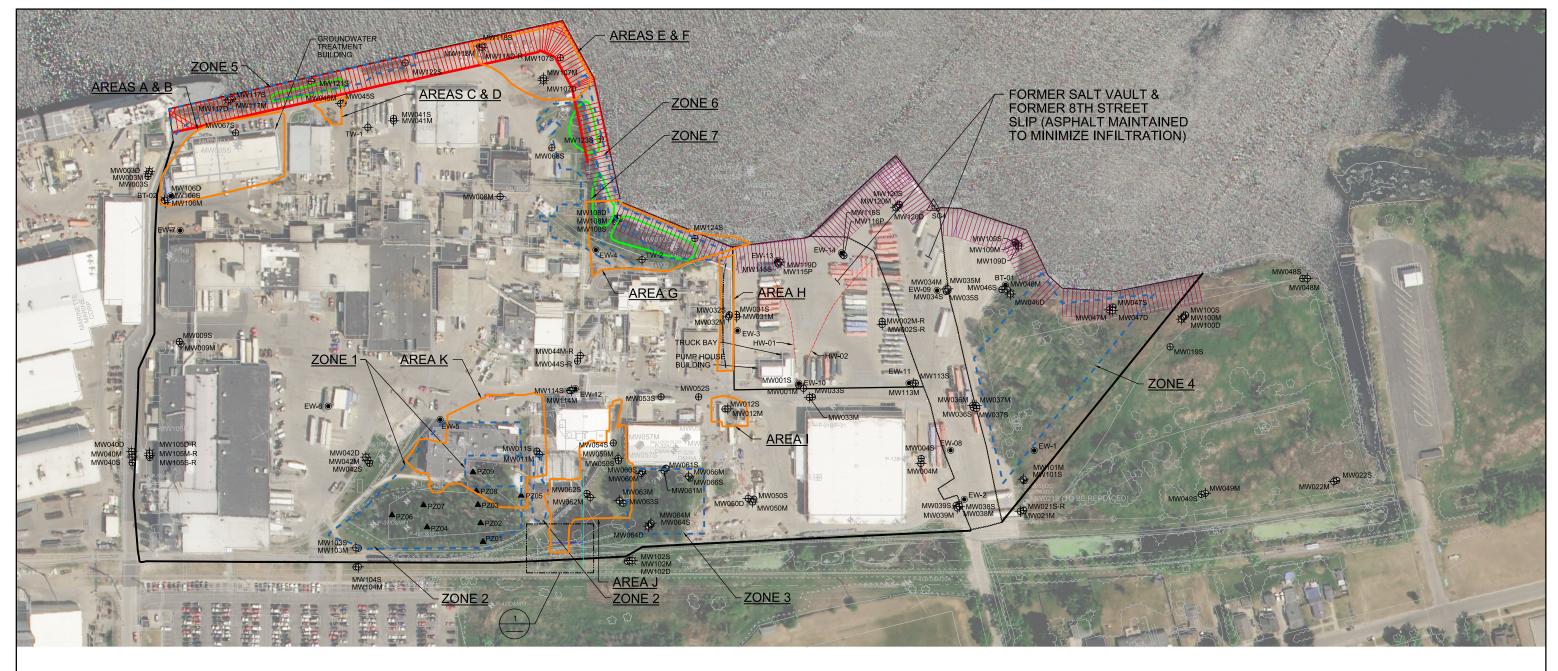

This technical memorandum has been prepared to document compliance with the Material Management Plan (MMP) previously prepared by ChemDesign Products Inc. (ChemDesign) associated with the installation of an underground potable water line on a portion of leased property owned by Tyco Fire Products LP (Tyco) at One Stanton Street, Marinette, Wisconsin. The MMP was prepared by Endpoint Solutions Corporation (Endpoint) under direction of ChemDesign and submitted to the U.S. Environmental Protection Agency (USEPA) and Wisconsin Department of Natural Resources (WDNR) for review and approval prior to commencement of work. The Tyco property is undergoing environmental investigation and remediation under a Resource Conservation and Recovery Act (RCRA) Administrative Order on Consent (AOC) between Tyco and the USEPA. In addition, environmental investigation and remedial actions are being conducted by Tyco with the support of the WDNR. A Site plan along with the location of the work discussed herein has been attached as **Figure 1**.

Commencing on October 14, 2024, a potable water line was installed on the property using horizontal well drilling techniques in accordance with information provided in the MMP. Two small excavations were completed and trench boxes were installed at each end of the proposed water line to facilitate horizontal drilling and line installation. Approximately 85 cubic yards of soil was excavated and temporarily stockpiled on plastic adjacent to the excavation areas during the work. If excavated soils were not placed back in the excavation at the cessation of the day's activities, any residual soil piles were also covered with plastic pending placement back into the excavation area. Note, all soils were placed back into their respective excavation areas during the nine (9) day time period over which these activities occurred.

In addition, approximately 4,500 gallons of groundwater was pumped from the ground as part of construction dewatering activities during installation. The groundwater was temporarily containerized in frac tanks until it could be transported for offsite disposition. The recovered groundwater was transported from the site on October 17 and October 31, 2024 under manifest numbers 020906138 and 020906128, respectively and disposed at Waste Management's Vickery, Ohio facility. A copy of the manifests and associated disposal documentation is attached.

Following installation of the water line, all soil excavated and temporarily stockpiled on site was reused to fill the excavated areas. Therefore, no offsite disposal of soil was required. It should be noted that the work was conducted on a portion of the RCRA soil cover (Area J), which consists of a geotextile membrane placed on top of impacted surface soils followed by six-inches of clean soil/topsoil and seeded with grass. The work resulted in limited disturbance of the soil cover, which was properly restored as presented in the MMP following the work. The intrusive work and restoration activities were completed on October 23, 2024. For reference, photographs of the area of work and following completion have been attached.

We trust the information provided herein demonstrates compliance with the MMP for the project. Should you have any questions, please do not hesitate to contact us.
