**ANNUAL LANDFILL MONITORING REPORT
FORMER GORSKI LANDFILL, MOSINEE, WISCONSIN**

Dear Ms. Sykora:

This Annual Landfill Monitoring Report has been prepared by Ramboll US Corporation (Ramboll) on behalf of an ad hoc group of parties (the “Group”) associated with the former Gorski Landfill located in Mosinee, Wisconsin (Figure 1). Contact information for the involved parties is provided in Attachment A. Pursuant to the Wisconsin Department of Natural Resources (WDNR) correspondence dated February 17, 2017, regarding the former Gorski Landfill site, Ramboll has prepared this letter to document the annual landfill cover inspection and groundwater monitoring event that was conducted in October 2018. The methodology and results of these October 2018 activities are provided as follows.

March 8, 2019

Landfill Cover Inspection

The annual landfill cover inspection was conducted by Ramboll on October 24, 2018, by traversing the entire site and observing the surface of the cover for evidence of erosion and exposed waste materials. The adequacy of the cover integrity was reviewed. Photographs were also taken as appropriate to document site conditions. No exposed waste materials and no erosion of the vegetated landfill cover was observed. Based on the results of the October 2018 landfill cover inspection, the condition of the landfill cover is concluded to be consistent with its designed intent and repairs to the landfill cover are not necessary at this time.

Monitoring Well Samples

Pursuant to the WDNR correspondence dated February 17, 2017, the following monitoring wells in the vicinity of the former landfill were sampled in October 2018 as part of the annual landfill monitoring event: MW-4, MW-6, PZ-3, and PZ-4 (Figure 2). The groundwater samples collected from these monitoring wells were submitted to Pace Analytical of Green Bay, Wisconsin, a Wisconsin-certified laboratory, and the laboratory reports are provided in Attachment B. The groundwater samples were analyzed for volatile organic compounds (VOCs) and the following field parameters: groundwater elevation, temperature, specific conductivity, pH, oxidation-reduction potential (ORP), and dissolved oxygen (DO).

The results of field parameter analyses are summarized in Table 1. As shown in Table 1, temperatures of the October 2018 groundwater samples ranged from 12.99 to 18.39 degrees Celsius (55.38 to 65.10 degrees Fahrenheit). The October

2018 groundwater samples revealed pH values that ranged from 5.71 to 5.91, and specific conductivity values ranged from 60 to 157 microsiemens (μs).

DO concentrations ranged from 4.32 to 13.00 milligrams per liter (mg/L), and ORP values ranged from -4 to +196 millivolts (mV). The presence of DO concentrations greater than 0.5 mg/L and ORP values greater than -100 mV are consistent with historical values and represent conditions that are not highly favourable for naturally occurring reductive dechlorination of chlorinated VOCs through anaerobic biodegradation. However, some degree of reductive dechlorination may occur at DO concentrations as high as 5 mg/L and ORP values as high as +50 mV (United States Environmental Protection Agency [USEPA], 1998: "Technical Protocol for Evaluating Natural Attenuation of Chlorinated Solvents in Groundwater," EPA/600/R-98/128). Based on the detected DO and ORP values, the groundwater monitoring information lead to the conclusion that groundwater within the vicinity of the former Gorski Landfill is generally aerobic and not highly favourable for the occurrence of naturally occurring reductive dechlorination of more chlorinated VOCs such as tetrachloroethene (PCE) and trichloroethene (TCE). Lesser halogenated VOCs such as vinyl chloride (VC), however, can be biodegraded in an aerobic environment.

Previous Annual Groundwater Monitoring Reports have included evaluations of PCE, TCE, cis-1,2-dichloroethene (cDCE), and VC concentration trends for the monitoring wells by using the Mann-Kendall Statistical Test for Trends, as formerly recommended by the WDNR for evaluating natural attenuation processes. Per current WDNR guidance, the Mann-Whitney U Test should be conducted by assembling well data for the most recent eight consecutive quarterly or semi-annual sampling events for each contaminant that has exceeded the Wisconsin Administrative Code (WAC) NR 140 Enforcement Standard (ES) at one or more monitoring wells. Because the monitoring well sampling frequency was modified from semi-annual to annual in 2011, the October 2018 groundwater sampling event was not preceded by consecutive quarterly or semi-annual sampling events. Therefore, the results could not be analyzed using the Mann-Whitney U Test. As such, qualitative discussions of the October 2018 groundwater sampling results (Table 2 and Attachment B) are provided as follows:

- At deep monitoring well PZ-3, concentrations of TCE, cDCE, trans-1,2-dichloroethene (tDCE), and VC have been generally decreasing since 2009. The October 2018 groundwater sample contained 1.2 micrograms per liter ($\mu\text{g}/\text{L}$) TCE, which is above the WAC NR 140 Preventive Action Limit (PAL) (0.5 $\mu\text{g}/\text{L}$) but less than the WAC NR 140 ES (5 $\mu\text{g}/\text{L}$). The October 2018 groundwater sample also contained 10.4 $\mu\text{g}/\text{L}$ TCE, which is above the WAC NR 140 PAL (7 $\mu\text{g}/\text{L}$) but less than the WAC NR 140 ES (70 $\mu\text{g}/\text{L}$). The TCE concentration has not exceeded the WAC NR 140 ES (5 $\mu\text{g}/\text{L}$) since October 2013, and the cDCE concentration has not exceeded the WAC NR 140 ES (70 $\mu\text{g}/\text{L}$) since October 2014. The analyte tDCE was not detected based on the analytical results of the October 2018 sampling event and has historically only exceeded the WAC NR 140 ES (100 $\mu\text{g}/\text{L}$) on one occasion (April 2008). The tDCE concentration has not exceeded the WAC NR 140 PAL since January 2009. VC has not been detected since October 2014.
- At shallow monitoring well MW-4, historical TCE concentrations have ranged from <0.13 to 14.9 $\mu\text{g}/\text{L}$ and have remained less than 10 $\mu\text{g}/\text{L}$ since April 2008. The October 2018 groundwater sample contained 2.2 $\mu\text{g}/\text{L}$ of TCE, which is above the WAC NR 140 PAL (0.5 $\mu\text{g}/\text{L}$) but below the WAC NR 140 ES (5 $\mu\text{g}/\text{L}$). The analyte cDCE was not detected based on the October 2018 analytical results and detected cDCE concentrations to date have not exceeded the WAC NR 140 PAL.
- At shallow monitoring well MW-6, detected concentrations of TCE have been generally decreasing since 2009. The October 2018 groundwater sample contained 5.2 $\mu\text{g}/\text{L}$ TCE, which is slightly above the WAC

NR 140 ES (5 µg/L) but well within the historical TCE concentration range of 1.57 to 23.9 µg/L. The October 2018 sample contained 2.3 µg/L cDCE, which consistent with historical results has remained below the WAC NR 140 PAL (7 µg/L).

- At deep monitoring well PZ-4 adjacent to MW-6, concentrations of TCE have been generally decreasing since 2010. The October 2018 groundwater sample contained 6.6 µg/L TCE, which is slightly above the WAC NR 140 ES (5 µg/L) but well within the historical TCE concentration range of 6.2 to 21.6 µg/L. The October 2018 sample contained 1.4 µg/L cDCE, which consistent with historical results has remained below the WAC NR 140 PAL (7 µg/L).
- October 2017 groundwater samples from monitoring wells MW-4, MW-6, PZ-3, and PZ-4 had contained detectable concentrations of chloromethane, which exceeded the WAC NR 140 PAL (3 µg/L) but did not exceed the WAC NR 140 ES (30 µg/L). Chloromethane had previously not been detected (and the October 2017 duplicate sample from MW-4 did not contain chloromethane). None of the 2018 groundwater samples contained detectable concentrations of chloromethane, such that the 2017 monitoring well results are apparently anomalous. The possible presence of chloromethane will continue to be a monitored as part of future sampling events.

Based on the October 2018 groundwater monitoring results, slight exceedances of the WAC NR 140 ES for TCE were detected in groundwater samples from two monitoring wells (5.2 µg/L at MW-6 and 6.6 µg/L at PZ-4). No other exceedances of WAC NR 140 ES values were detected. The continued overall decreasing chlorinated VOC concentrations support the conclusion that the residual (low parts per billion) chlorinated VOCs in groundwater are naturally attenuating.

Residential Well Samples

Pursuant to the WDNR correspondence dated February 17, 2017, the following residential wells were sampled in October 2018 as part of the annual landfill monitoring event: 626 CTHB, 642R CTH B, 652R CTH B, 666 CTH B, 669 CTH B, 670 CTHB, 1054 CTHKK, 1058 CTHKK, 1096 CTHKK, and 1101 CTHKK. The water samples obtained from the residential wells were submitted to the Wisconsin-certified laboratory and were analyzed for VOCs, the results of which are provided in Attachment B and summarized in Table 3.

As shown in Table 3, the residential well water sample from 666 CTH B was the only October 2018 sample that contained a detectable VOC concentration. Methyl-tert-butyl ether (MTBE) was detected at a concentration of 12.1 µg/L, which slightly exceeds the WAC Public Health NR 140 PAL (12 µg/L) but is below the WAC Public Health NR 140 ES (60 µg/L). The USEPA has not established a Safe Drinking Water Act maximum contaminant level (MCL) for MTBE. A source of MTBE has not been identified associated with the former Gorski Landfill, and MTBE has not been detected to date in any of the residential well or monitoring well samples obtained as part of the site groundwater monitoring program. The possible presence of MTBE in residential well water samples will be evaluated as part of future groundwater monitoring events.

October 2017 water samples from residential wells 642R CTHB, 652R CTH B, 669 CTHB, 1096 CTH KK, and 1101 CTH KK had contained detectable concentrations of chloromethane between 2.7 and 12.5 µg/L, none of which exceeded the WAC Public Health NR 140 ES (30 µg/L). None of the October 2018 residential well samples contained detectable concentrations of chloromethane, such that (similar to the monitoring well results) the October 2017 chloromethane results from the residential wells are apparently anomalous. The possible presence of chloromethane in residential well water samples will continue to be evaluated as part of future groundwater monitoring events.

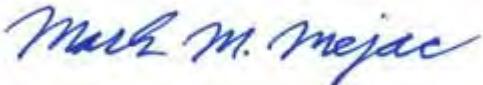

Recommended 2019 Groundwater Monitoring Program

Pursuant to the February 2017 WDNR correspondence and the information contained herein, Ramboll recommends that the 2019 groundwater monitoring program be conducted in accordance with the following:

1. Monitoring wells MW-4, MW-6, PZ-3, and PZ-4 will continue to be sampled on an annual basis in October.
2. The monitoring well groundwater samples will continue to be analyzed for VOCs (using USEPA Method 8260 or 8021B), field conductivity, pH, temperature, ORP and DO, and groundwater elevations will be obtained.
3. The following private wells will continue to be sampled on an annual basis in October: 626 CTH B, 642R CTH B, 652R CTH B, 666 CTH B, 669 CTH B, 670 CTH B, 1054 CTH KK, 1058 CTH KK, 1096 CTH KK, and 1101 CTH KK.
4. The private well water samples will continue to be analyzed for VOCs using USEPA Methods 8260, 502.2, or 524.4. The analytical methods will have method detection limits sufficiently low to detect VOCs at or below their respective WAC NR 140 ES values.
5. The analytical results of the water sample analyses will continue to be submitted within 60 days of sample collection on computer diskette to the WDNR Bureau of Waste & Materials Management.
6. The analytical results of the residential water sample analyses will also continue to be submitted within 10 days of Ramboll's receipt of those results to Ms. Amanda Dehmlow of the WDNR Solid Waste Program.

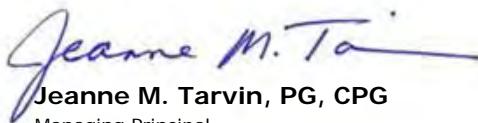

We trust that the information contained herein adequately meets your current needs. If you have any questions, please feel free to contact us. Thank you very much for your assistance with this matter.

RE: Project: 1690010425 GORSKI LF
Pace Project No.: 40178374

Dear Mark Mejac:

Enclosed are the analytical results for sample(s) received by the laboratory on October 25, 2018. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Steven Mleczko

QUALIFIERS

Project: 1690010425 GORSKI LF

Pace Project No.: 40178374

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor and percent moisture.

LOQ - Limit of Quantitation adjusted for dilution factor and percent moisture.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-G Pace Analytical Services - Green Bay

Sample Preservation Receipt Form

Client Name: Rambo M

Project # 401747M

All containers needing preservation have been checked and noted below: Yes No N/A

Lab Lot# of pH paper:

Lab Std #ID of preservation (if pH adjusted):

Initial when completed:

Date/ Time:

Pace Analytical Services, Inc.
1241 Bellevue Street, Suite 9
Green Bay, WI 54302

Page 44

Tracking #:

Custody Seal on Cooler/Box Present: yes no Seals intact: yes no

Custody Seal on Samples Present: yes no Seals intact: yes no

Packing Material: Bubble Wrap Bubble Bags None Other

Thermometer Used SR - NA Type of Ice: Wet Blue Dry None

Samples on ice, cooling process has begun

Cooler Temperature Uncorr: /Corr:

Temp Blank Present: yes no

Biological Tissue is Frozen: yes no

Person examining contents:

Date: 10/25/18

Initials: N

Temp should be above freezing to 6°C.

Biota Samples may be received at ≤ 0°C.

Chain of Custody Present:	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A	1.
Chain of Custody Filled Out:	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> N/A	2. <u>No mail to</u> <u>10/25/18</u>
Chain of Custody Relinquished:	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A	3. <u>No time</u> <u>10/25/18</u>
Sampler Name & Signature on COC:	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A	4.
Samples Arrived within Hold Time:	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	5.
- VOA Samples frozen upon receipt	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	Date/Time:
Short Hold Time Analysis (<72hr):	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	6.
