Subject: PFAS Screening Assessment
Milwaukee Die Casting Company
4132 N. Holton St., Milwaukee, Wisconsin
BRRTS #: 02-41-000023, FID #: 241228240

Dear Mr. Clark,

The Wisconsin Department of Natural Resources (DNR) received additional information regarding a poly-fluorinated alkyl substances (PFAS) screening assessment on September 30, 2021, prepared on your behalf by GeoSyntec Consultants, for the former Milwaukee Die Casting Company (MDCC) property located at 4132 N. Holton St., Milwaukee, Wisconsin. The screening assessment was conducted to comply with the DNR's requirement to evaluate emerging contaminants as part of a site investigation.

Based on the DNR's review of the PFAS screening assessment information, the DNR concurs there is no indication that PFAS-containing products were used in manufacturing processes at the former MDCC facility. PFAS sampling is not required at this time, but may be required in the future if additional information indicates PFAS-containing products were used at the facility.

The DNR appreciates your efforts to restore the environment at this site. If you or your consultant have questions concerning this letter or require additional information, please contact me at (262) 202-3921 or john.moll@wisconsin.gov.

Sincerely,

J. Gregory Moll, P.G.
