Mr. Keld Lauridsen
Hydrogeologist/Project Manager
WDNR-Northeast Region RR
2984 Shawano Avenue
Green Bay, WI 54313-6727

RE: Summary of the May 14 & 15, 2019 groundwater sampling events at the former Better Brite Chrome and Zinc Shops.

Dear Keld:

The purpose of this letter report is to summarize the groundwater sampling events conducted on May 14 & 15, 2019 at the former Better Brite chrome and zinc shops. The former Better Brite facilities are located at 519 Lande Street (chrome shop, BRRTS # 02-05-000030) and 315 S. 6th Street (zinc shop, BRRTS # 02-05-000031), De Pere, Wisconsin. (See Figure 1 – Site Location Map.) This report includes:

- Figure 1 – Site Location Map
- Figure 2 – Monitoring Wells – Chrome Site
- Figure 3 – Monitoring Wells – Zinc Site
- Well Specific Field Sheets
- Table 1 – Groundwater Analytical Summary, Better Brite – Chrome Shop
- Table 2 – Groundwater Analytical Summary, Better Brite – Zinc Shop
- Monitoring Well Photograph Summary
- Laboratory Report

Groundwater elevations were only taken at the monitoring points that were sampled. Groundwater elevations were recorded on the well specific field sheets. (See Well Specific Field Sheets.)

Monitoring points W-1 and W-1A would allow the water level meter probe to be placed down the PVC pipe. However, a standard bailer would not freely go down the PVC pipe. (See Monitoring Well Photograph Summary.) A peristaltic pump was used to collect the samples. FOTH purged these monitoring points several times in the weeks leading up to OMNI's sampling.

Monitoring well covers were inspected at all monitoring points that could be located during the sampling event. The conditions of the covers were noted on the well specific field sheets and photographs of the covers were taken. (See Well Specific Field Sheets and Monitoring Well Photograph Summary.)

Color, odor, and turbidity observations were recorded on well specific field sheets. The well specific field sheets also list the measured depth to water from the top of the PVC pipe, mean sea level groundwater elevation, the length of time spent purging and the approximate gallons of groundwater purged from each monitoring well/piezometer prior to taking the groundwater sample. (See Well Specific Field Sheets.)

Purged groundwater from the monitoring wells and piezometers was collected in 5-gallon buckets. The purged groundwater was placed into the sump in the treatment building located at the former zinc shop site for treatment.

Unfiltered groundwater samples collected from the monitoring wells and zinc shop sump were submitted for laboratory hexavalent chromium analysis. Unfiltered groundwater from the zinc shop sump was also analyzed for cyanide and volatile organic compounds (VOCs). Unfiltered groundwater from monitoring well MW-116 was also analyzed for VOCs. Groundwater analytical methods are included with the laboratory report. (See Laboratory Report.) The laboratory analysis has been summarized in Table 1 and Table 2. (See Table 1 – Groundwater Analytical Summary, Better Brite – Chrome Shop and Table 2 - Groundwater Analytical Summary, Better Brite – Zinc Shop.)

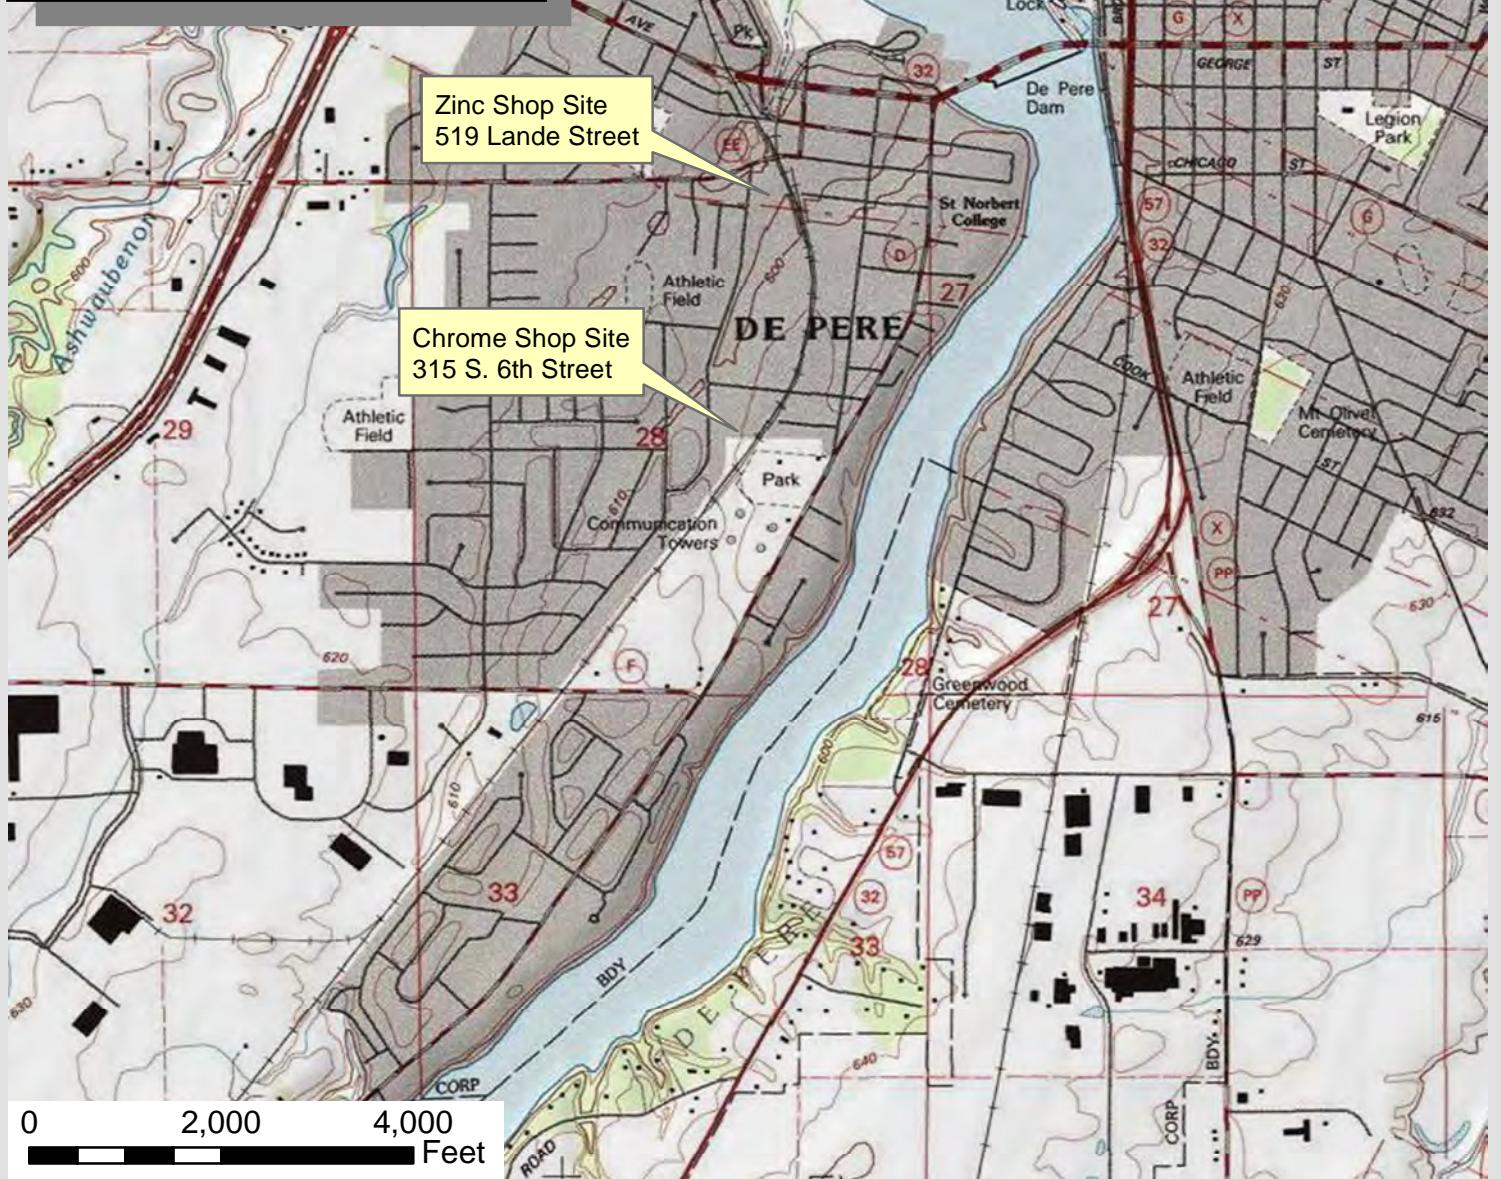

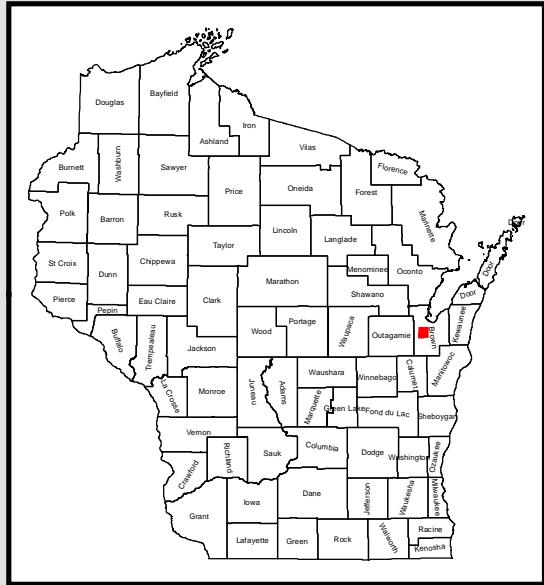

All monitoring locations had lower hexavalent chromium laboratory analysis results than recent events, with the exception of MW-111 which was the same as the 2018 sampling event. In general, VOC results for the zinc shop sump and MW-116 were similar when compared to past sampling events. Groundwater enforcement standard exceedances for hexavalent chromium remain at both sites. At the former chrome shop site, the hexavalent chromium groundwater enforcement standard exceedance remains in MW-116. Groundwater enforcement standard and preventive action limit exceedances of VOCs remain in MW-116. At the former zinc shop site, the hexavalent chromium groundwater enforcement standard was exceeded in monitoring points W-1, W-1A, MW-6, MW-10 and the sump. Groundwater preventive action limit exceedance for cyanide was found in the sump.

If you have any questions on the enclosed information, please contact me at 920/830-6174 or by email at kkennedy@omnni.com.

Sincerely,
OMNNI Associates, Inc.

Kimberly Kennedy

1 Depth to bottom of the well is suspect. Felt like soft bottom (sediment).

2 A standard bailer would not fit down the monitoring well.

3 Sump was not running at time of sample collection.

4 Well height modified. New elevation unknown.

RE: Project: N1969A07/010 BETTER BRITE
Pace Project No.: 40187578

Dear Brian Wayner:

Enclosed are the analytical results for sample(s) received by the laboratory on May 14, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Steven Mleczko

QUALIFIERS

Project: N1969A07/010 BETTER BRITE

Pace Project No.: 40187578

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor, percent moisture, initial weight and final volume.

LOQ - Limit of Quantitation adjusted for dilution factor, percent moisture, initial weight and final volume.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-G Pace Analytical Services - Green Bay

PASI-I Pace Analytical Services - Indianapolis

ANALYTE QUALIFIERS

D3 Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.

L5 LCS recovery exceeded QC limits. Batch accepted based on matrix spike recovery within LCS limits.

M0 Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

R1 RPD value was outside control limits.

RE: Project: N1969A07/010 BETTER BRITE
Pace Project No.: 40187620

Dear Brian Wayner:

Enclosed are the analytical results for sample(s) received by the laboratory on May 15, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Steven Mleczko

QUALIFIERS

Project: N1969A07/010 BETTER BRITE
Pace Project No.: 40187620

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor, percent moisture, initial weight and final volume.

LOQ - Limit of Quantitation adjusted for dilution factor, percent moisture, initial weight and final volume.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-G Pace Analytical Services - Green Bay

ANALYTE QUALIFIERS

D3 Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.

**RE: Former Better Brite Chrome Shop and Zinc Shop – groundwater sampling
OMNNI Invoice**

Dear Keld:

Enclosed is OMNNI's invoice for services performed at the former Better Brite facilities. Invoice #N1969A07_010-1 is for groundwater sampling, laboratory analysis, reporting, and correspondence. A paper copy and pdf of the summary report were sent to you. Copies of the laboratory invoices have been enclosed for reference.

If you have any questions regarding this invoice or the project in general, please contact me.

Sincerely,
OMNNI Associates, Inc.

To: 'Kimberly Kennedy'
Cc: Brian Wayner; Herrera, Adrian - DNR; Chronert, Roxanne N - DNR; Fox, Shelley L - DNR
Subject: RE: SOW for groundwater sampling at Better Brite, De Pere, WI

Kim,

This email serves as DNR approval of your cost estimate of \$3,663 and a notice to proceed with the requested groundwater sampling SOW at the above referenced site.

I will have groundwater monitoring wells W1 and W1A purged by Foth prior to your arrival.

Let me know when you have it scheduled.

Thanks,

-Keld

We are committed to service excellence.

Subject: SOW for groundwater sampling at Better Brite, De Pere, WI

Brian:

Please provide the Department a cost estimate for the following SOW for a groundwater sampling event at the former Better Brite Zinc and Chrome Shop sites in De Pere, WI. Sampling should be completed as soon as your schedule allows.

Chrome Shop:

Collect groundwater samples from monitoring wells MW111, MW115, MW115A and MW116 using conventional sampling techniques. Groundwater samples are to be analyzed for hexavalent chromium.

Monitoring well MW116 is also to be analyzed for VOC.

Zinc Shop:

Collect groundwater samples from monitoring points W1, W1A, MW3R, MW5, MW6, MW9, MW10 and the Zinc Shop sump using conventional sampling techniques. Grab sampling without any purging is acceptable for monitoring points W1 and W1A due damaged well screens/casings. The Department will make an effort to have the current treatment plant operator (Foth Infrastructure & Environment) purge these 2 wells prior to the next sampling event using plastic tubing and a pump. Groundwater samples from all the monitoring points are to be analyzed for hexavalent chromium.

The Zinc Shop sump is also to be analyzed for cyanide and VOC.

Groundwater elevations are to be determined for all groundwater monitoring points sampled. The groundwater elevation at the Zinc Shop sump should also be determined and included on the well specific field sheets.

Visually inspect all wells not sampled and note if any repairs are needed. If possible, minor repairs can be completed during this sampling event. Any cost associated with well repairs will be paid in addition to the cost estimate for the sampling activities.

All data is to be provided in tabular format attached to a letter update report.

Please let me know if you have any questions.

Thanks,

-Keld

We are committed to service excellence.

**RE: Better Brite Superfund Site, De Pere, WI
Groundwater Sampling Proposal**

Dear Keld:

Attached is our proposed level of effort for the groundwater sampling services requested at the Better Brite Superfund site. Our proposal is in response to your request for a cost estimate emailed on March 26, 2019.

Our level of effort is broken down as follows:

- Preparing for sampling, which includes notifying the Wisconsin Department of Natural Resources (DNR) project manager, coordinating with the laboratory, obtaining sampling containers, preparing labels, preparing chain of custody, Geo7X setup, and mobilization.
- Visual inspection, which includes locating and visually inspecting the cover of the 22 monitoring points which do not require groundwater analysis.
 - We estimated 10 minutes per monitoring point to locate the point, verify the GPS location, take a picture of the monitoring point cover, and note any general issues with the monitoring point cover.
 - If possible, minor repairs would be made to the monitoring well cover. Any cost associated with the monitoring well repairs would be paid in addition to the cost estimate provided for the sampling services.
- Monitoring well sampling, which includes determining the depth of groundwater and collecting a sample from 11 monitoring points.
 - We estimated 45 minutes per sampled monitoring point to locate the point, open the cover, take and record water elevation, decontaminate the water

level meter, purge the monitoring point with the provided bailer, take an unfiltered sample, which will be analyzed for hexavalent chromium, process the sample, complete the chain of custody, clean the cover, note any issues with the monitoring point, and secure the cover. Monitoring well MW116 will also be analyzed for VOCs.

- Sump sampling.
 - We estimated 30 minutes to access the Zinc Shop sump, measure the water level in the sump, collect an unfiltered sample, which will be analyzed for hexavalent chromium, VOCs, and cyanide, process the sample, complete the chain of custody, and secure the sump enclosure.
- Travel time.
 - We estimated two days of mobilization at 2.5 hours per day to travel to the site, travel between the sites, travel to the laboratory, and return to our office.
- Because of the short holding time for hexavalent chromium analysis, we are planning on delivering the samples to Pace Analytical rather than arranging for courier pickup.
- Purge water would be disposed at the treatment facility located at 315 South Sixth Street.
- Reporting/Project Management.
 - The letter report would consist of brief discussion of the sampling activities, the analytical report from the laboratory, summary tables of the analysis, a site location map, monitoring well locations maps with updated monitoring point locations, photographic summary, and well specific field sheets.
 - Project management will consist of reporting to the DNR project manager, and processing invoices.

Assumptions:

- The Zinc Shop sump can be readily accessed (building can be entered, sump enclosure gate can be unlocked and we can access the sump in a straightforward manner).
- All monitoring points can be accessed. The owner of the property that MW-111 is located is home and/or the dogs are not outside.

- W1, W1A and MW2, due to damaged well screens/casings, will be purged by others prior to the sampling event.
- The sampling event can be performed before the ground is snow covered.

We are not intending to provide, but can provide if requested, the following services:

- Groundwater elevations at monitoring points not sampled.
- Groundwater contour maps.
- Monitoring well cover repair, beyond minor repairs.
- Bailer replacement.
- Duplicate samples and analysis.
- pH/Conductivity/Temperature readings.

What we will need from the DNR:

- Access to the properties and treatment facility.
- Authorization to provide the services, in the form of a purchase order, service agreement, contract, or email notification.

We value the relationship built with the DNR on similar projects in the past, and we look forward to continuing to work with you. If you have any questions on our proposed services, please contact me at 920/830-6174 or kkennedy@omnni.com.

Very truly yours,
OMNNI Associates, Inc.
