Subject: Transmittal April, 2017 Monitoring Well Sampling Results
We Energies' Appleton MGP Site, FID #445033380; BRRTS #02-45-000042

Dear Ms. Borski:

We Energies recently received final analytical results for monitoring wells and piezometers for our April, 2017 quarterly sampling event on the Fox River Mills Apartments property, located adjacent to the above referenced site. A copy of the notification to the property owner and associated summary report are attached.

Please do not hesitate to contact me at (414) 221-2156 or via email at frank.dombrowski@we-energies.com if you have any questions or if further information may be required.

Sincerely,

Frank Dombrowski
Principal Environmental Consultant

Subject: Transmittal of May, 2017 Groundwater Sampling Results for Fox River Mills Properties

Dear Mr. Bornemann:

We Energies recently completed groundwater sampling at your property as part of routine quarterly monitoring for the former manufactured gas plant (MGP) site located at 337 Water St., Appleton WI. The results of this sampling are summarized in the attached report and summary tables.

Two wells (PZ-26 and PZ-28) contained evidence of free product (oily material). Consistent with previous samples collected from existing wells, the presence of volatile organic chemicals (VOCs), naphthalene and metals were present in groundwater at levels above Wisconsin Department of Natural Resources (WDNR) enforcement standards (ESs) in several locations (Table 1). The final laboratory results for the groundwater sampling conducted on your property are also included in the attachment.

As reported previously, there is no indication that the observed groundwater impacts have changed significantly, are a recent occurrence or pose any immediate risk to the health of the occupants of the building or to the environment. However, the presence of free product will warrant further investigation and we plan to continue quarterly monitoring activities on your property consistent with the WDNR-approved Supplemental Site Investigation Plan and the access agreement.

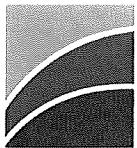

We Energies appreciates your ongoing cooperation and assistance with this matter. Please feel free to contact me at your convenience at (414) 221-2156 or via email at frank.dombrowski@we-energies.com with any questions or if further information may be needed.

Sincerely,

Frank Dombrowski
Principal Environmental Consultant
WEC Energy Group - Business Services

RE: May 2017 Sample Results Notification
Groundwater results collected in April 2017
Appleton City (Coal Tar), aka Appleton MGP
337 Water Street, Appleton, Wisconsin
WDNR ERP Case #02-45-000042
FID #445033380

Dear Mr. Dombrowski,

This sample results notification letter for the Appleton City former manufactured gas plant (MGP) site located at 337 Water Street in Appleton, Wisconsin (Figure 1) summarizes routine groundwater sampling activities that occurred in April 2017 located on the property occupied by the Fox River Mills Apartments (Figure 1). Free product (oily material) was measured in PZ-26 and PZ-28 and groundwater samples were collected from monitoring wells and piezometers PZ-23, MW-26, MW-27, PZ-27, and MW-28 in accordance with the 2017 groundwater monitoring plan.

Groundwater monitoring wells PZ-23, PZ-26, PZ-27, and PZ-28 are screened within the shallow bedrock approximately 20 to 25 feet below ground surface. Approximately 4 to 5 feet of free product was observed in PZ-26. Approximately 1 foot of free product was observed in PZ-28. No free product was recovered from either well, because the pump was not functioning properly (free product recovery will resume during the next quarterly sampling event). Free product was not observed in any of the other wells. Groundwater analytical results (Table 1) collected from the remaining shallow bedrock wells are consistent with previous samples collected from these wells which indicate benzene, naphthalene, iron, and manganese in excess of the Wisconsin Department of Natural Resources (WDNR) enforcement standards (ES) in groundwater.

Groundwater monitoring wells MW-26, MW-27, and MW-28 are screened within the unlithified material above bedrock approximately 5 to 15 feet below ground surface. No free product was observed in any of these wells. Groundwater analytical results indicate the presence of benzene, naphthalene, and metals in excess of the WDNR ES in groundwater.

The laboratory report containing groundwater results is included in Attachment A, and the results are summarized in Table 1. There are no indications that the observed groundwater impacts (or the presence of free product in wells with previous groundwater exceedances) are a recent occurrence or pose an immediate risk to the health of the occupants in the apartment building.

Mr. Frank Dombrowski

QUALIFIERS

Project: W-1272-000003 APPLETON MGP

Pace Project No.: 40148670

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor and percent moisture.

LOQ - Limit of Quantitation adjusted for dilution factor and percent moisture.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

M0 Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

SG-3	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA
SG-4	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA

Notes:

- 1 - A complete round of water levels should be collected prior to any well purging or sampling activities.
- 2 - All metals (Ar, Mn, and Fe) are to be field filtered using in-line disposable filters.
- 3 - Field parameters include:

- pH
- Dissolved oxygen
- Temperature
- Specific conductance
- Oxidation/reduction potential

- NA** - Measurement/analysis not applicable for this location.
***** - NAPL Removal will be completed if NAPL greater than 0.5 feet is present
N - Water quality sampling will not be conducted at this location as long as NAPL remains present
TBD - To Be Determined.
