Subject: Military Creek Site Assessment Work Proposal

As a result of my conference call with Water Resources Management (Jim Amrhein, Tom Janisch, Lee Liebenstein) and Solid Waste (Scott Watson), we concluded that Water Resources Management staff should conduct an instream macroinvertebrate study on Military Creek. We are considering placing Hester Dendy samplers within Military Creek above and below the C.M. Christensen property. I foresee approximately five to six sampling locations with replicates of three samples at each site.

I talked with Laura Herman briefly about conducting the family biotic index analysis on these samples. She indicated she would be willing to do this work. What I want to do is make sure we all realize the potential workload and agree what we can and cannot do.

After we decide how much time Laura is able to devote to this project, I will send a confirmation memo to Madison.
