SUBJECT: Analytical Methods And Toxicity Testing Results From Military Creek  
And North Twin Lake Sediments

At our May 15, 1996 meeting in Rhinelander to discuss the quality of sediments in Military Creek, I indicated that I would send two items related to the sampling we did in the creek on October 9 - 11, 1995. The items which are enclosed include:

- 1) The analytical methods used by the State Lab of Hygiene to analyze the sediments for the organic compounds of interest. If you have technical questions on the methods, an initial contact would be Ron Arneson (608-264-8949) of our Technical Services Section.
- 2) The data workup for the Military Creek toxicity testing results. If you have any questions on the data analysis, contact Linda Talbot (608-266-8148) of the Contaminants and Sediment Unit, the Unit I am in.  
If you are interested in the toxicity testing protocols that the State Biomonitoring Lab uses, let me know (608-266-9268).
