Technical Memorandum

On behalf of the Lemberger Site Remediation Group (LSRG), and in accordance with the Quality Assurance Project Plan, Revision 0 ("QAPP"; October 2022), TRC Environmental Corporation (TRC) has prepared this technical memorandum to present results of the recent PFAS groundwater sampling event, an evaluation of the significance of PFAS at the site, and recommendations based on the results of the evaluation.

Introduction

The USEPA completed the fifth Five-Year Review Report for the Lemberger Sites in July 2020 (USEPA, 2020). The report concluded that the USEPA should proceed with a revision to the groundwater cleanup standards (to the Wisconsin NR140 Enforcement Standard [ES]) and to incorporate a Monitored Natural Attenuation (MNA) remedy for volatile organic compounds (VOCs) into an amendment of the 1991 and 1994 Records of Decision (ROD) for the Sites. The Five-Year Review Report also identified that the emerging contaminant group per-and poly-

fluoroalkyl substances (PFAS) had not been evaluated at the Lemberger Sites. Based on the presence of these compounds at other landfill sites with VOC contamination, the USEPA recommended that groundwater samples should be collected and analyzed for PFAS. These recommendations were incorporated into the January 2021 ROD Amendment (USEPA, 2021).

In order to determine if PFAS are constituents of concern (COCs) at the Lemberger Sites, TRC prepared a PFAS Evaluation Work Plan (TRC, 2021a) to collect groundwater samples for PFAS analysis from various site monitoring wells in conjunction with a routine groundwater monitoring event. This initial PFAS evaluation program included four monitoring wells representative of different portions of the chlorinated VOC (CVOC) plume, ranging from upgradient of the site (RM-102D), to the Lemberger Transport and Recycling Landfill (LTR) former source area (RM-007D), to more distal downgradient locations (RM-401XD and RM-204D; Figure 1). The data from these four wells were evaluated to determine if these compounds are present, and if they are present, if the detections are sufficiently significant to make PFAS COCs at the landfills. The evaluation report concluded that PFAS are not constituents of concern at the Lemberger Sites, and that no further action is necessary with respect to PFAS at the site (TRC, 2021b).

In February 2022, the Wisconsin Department of Natural Resources (WDNR) agreed with the conclusion that no further PFAS sampling was required at the Lemberger sites at this time (WDNR, 2022). The USEPA, while in general agreement with the conclusions of the initial evaluation, required confirmation sampling for PFAS coordinated through the USEPA's PFAS team (USEPA, 2022). The addition of PFAS sampling to the overall analytical program for the Lemberger sites required addition of this analytical group to the site QAPP. An updated QAPP was submitted in October 2022, which included a PFAS Sampling Workplan (TRC, 2022). The PFAS Sampling Workplan specified the collection of groundwater samples for PFAS analysis from two of the wells previously sampled for PFAS, RM-007D and RM-401XD. This technical memorandum presents a summary of the work performed and an evaluation of all of the PFAS analytical results.

Work Performed

On December 15, 2022, TRC and Brooks Services, LLC (Brooks Services) collected groundwater samples from monitoring wells RM-007D (LTR source area) and RM-401XD (immediately downgradient of the Lemberger Landfill [LL] and downgradient of the LTR) for PFAS analysis. In addition, one duplicate sample was collected at RM-007D; a field equipment blank was collected from the portable QED Sample Pro® bladder pump (including pump body, bladder, and HDPE tubing); and one ambient air (poured) blank was collected at the field site. All work was performed in accordance with the Work Plan and QAPP (TRC, 2022). The samples were packed on ice in a cooler and shipped to the Test America Laboratory in Sacramento, California for analysis by modified EPA Method 537 (WI-33 list).

Analytical Results

The analytical results for PFAS are summarized in Table 1 and shown on Figure 1. Table 1 and Figure 1 also include data from the September 2021 PFAS sampling event for ease of comparison. The data validation report and laboratory data sheets for the December 2022 PFAS samples are included in Attachment 1. The field and laboratory data will be submitted as an electronic data deliverable (EDD) in a subsequent Data Transmittal document once the remainder of the fourth quarter analytical data have been validated.

The December 2022 results are generally consistent with the September 2021 sampling results. Low concentrations of only six PFAS (perfluorobutanoic acid [PFBA], perfluorohexanoic acid [PFHxA], perfluoroheptanoic acid [PFHpA], perfluorooctanoic acid [PFOA], perfluorobutanesulfonic acid [PFBS], and perfluorooctanesulfonamide [FOSA]) have been reported in the groundwater samples, at individual concentrations ranging up to 5.2 ng/L. The maximum total PFAS concentration in any one of the samples was less than 12 ng/L. Only the PFOA results at RM-007D (maximum of 5.1 ng/L) have exceeded the recommended Preventive Action Limit (PAL) of 2 ng/L for that compound. None of the results exceeded a recommended Enforcement Standard (ES). No PFAS have been detected in any field equipment blank or atmospheric (poured) blank from either sampling event.

Evaluation of Results

Five of the six PFAS that have been detected in the site groundwater are terminal perfluorinated carboxylic acids (PFBA, PFHxA, PFHpA, and PFOA) or perfluorinated sulfonic acids (PFBS). FOSA, detected only at downgradient location RM-204D in September 2021, is a transient intermediate compound. No precursor fluorotelomers (e.g., 6:2 FTS or 8:2 FTS) have been detected in the groundwater samples.

PFBA has only been detected at source area well RM-007D, at concentrations ranging from 4.3 ng/L to 5.2 ng/L. PFOA was detected in groundwater from the source area well RM-007D (4.0 to 5.1 ng/L), as well as both downgradient locations, at concentrations decreasing with distance from the LTR (1.1 to 1.6 ng/L at RM-401XD; and 0.75 ng/L at RM-204D in September 2021). The concentrations present do not pose an ecological or human health risk. PFBA concentrations are two orders of magnitude below the PAL; and PFOA concentrations are an order of magnitude below the ES even within the former source area. Source control measures implemented at the LTR in the mid-1990s, including the removal of potential source materials (drums, jars, gas cylinders), placement of a soil cover, and operation of leachate/groundwater extraction and treatment systems through the 1990s and early 2000s have likely eliminated the LTR as a potential PFAS source. The source control is confirmed through evaluation of historical concentrations of the primary site COCs, CVOCs. CVOC concentrations at the site show site-wide stable to decreasing trends (TRC, 2019).

Two compounds not previously reported at the site, PFHpA and PFHxA, were reported at low concentrations in the primary sample from source area well RM-007D in December 2022. The reported concentrations are just above their respective detection limits, and these compounds were not reported in the duplicate sample collected from RM-007D. The PFHxA concentration (0.62 ng/L) is well below the proposed ES for this compound (30,000 ng/L) and there is no proposed standard for PFHpA.

PFBS was reported at concentrations just above the detection limit in groundwater from three of the four wells sampled in September 2021, including upgradient location RM-102D (0.21 ng/L); PFBS was reported at the detection limit only at RM-401XD in December 2022 (0.18 ng/L). The apparent ubiquitous low-level distribution of this compound in groundwater (but not in the field blanks) suggests its presence is not the result of sample contamination and is also not related to the Landfills. Concentrations of PFBS (maximum of 0.33 ng/L) are well below the recommended PAL (90,000 ng/L).

Conclusions and Recommendations

Based on our analysis of the PFAS data collected from groundwater at the Lemberger site, TRC concludes the following:

- The analytical results for PFAS compounds have been consistent over two sampling events.
- There were no detections of PFAS compounds at concentrations above the recommended ESSs.
- The very low concentrations of PFAS present in the groundwater do not currently pose a risk to human health or the environment.
- Source control measures taken at the LTR in the 1990s and the lack of precursor fluorotelomers in the groundwater indicate that PFAS at the site will not pose a risk to human health or the environment in the future.

These results indicate that PFAS are not constituents of concern at the Lemberger sites. TRC recommends that no further action is necessary with respect to PFAS at the site.

Notes:

Bold text indicates the compound was reported at a concentration above the method detection limit (MDL).

= value exceeds a recommended PAL.

< = Less than the detection limit.

J = Result is less than the reporting limit (RL) but greater than or equal to the method detection limit (MDL) and the concentration is an approximate value.

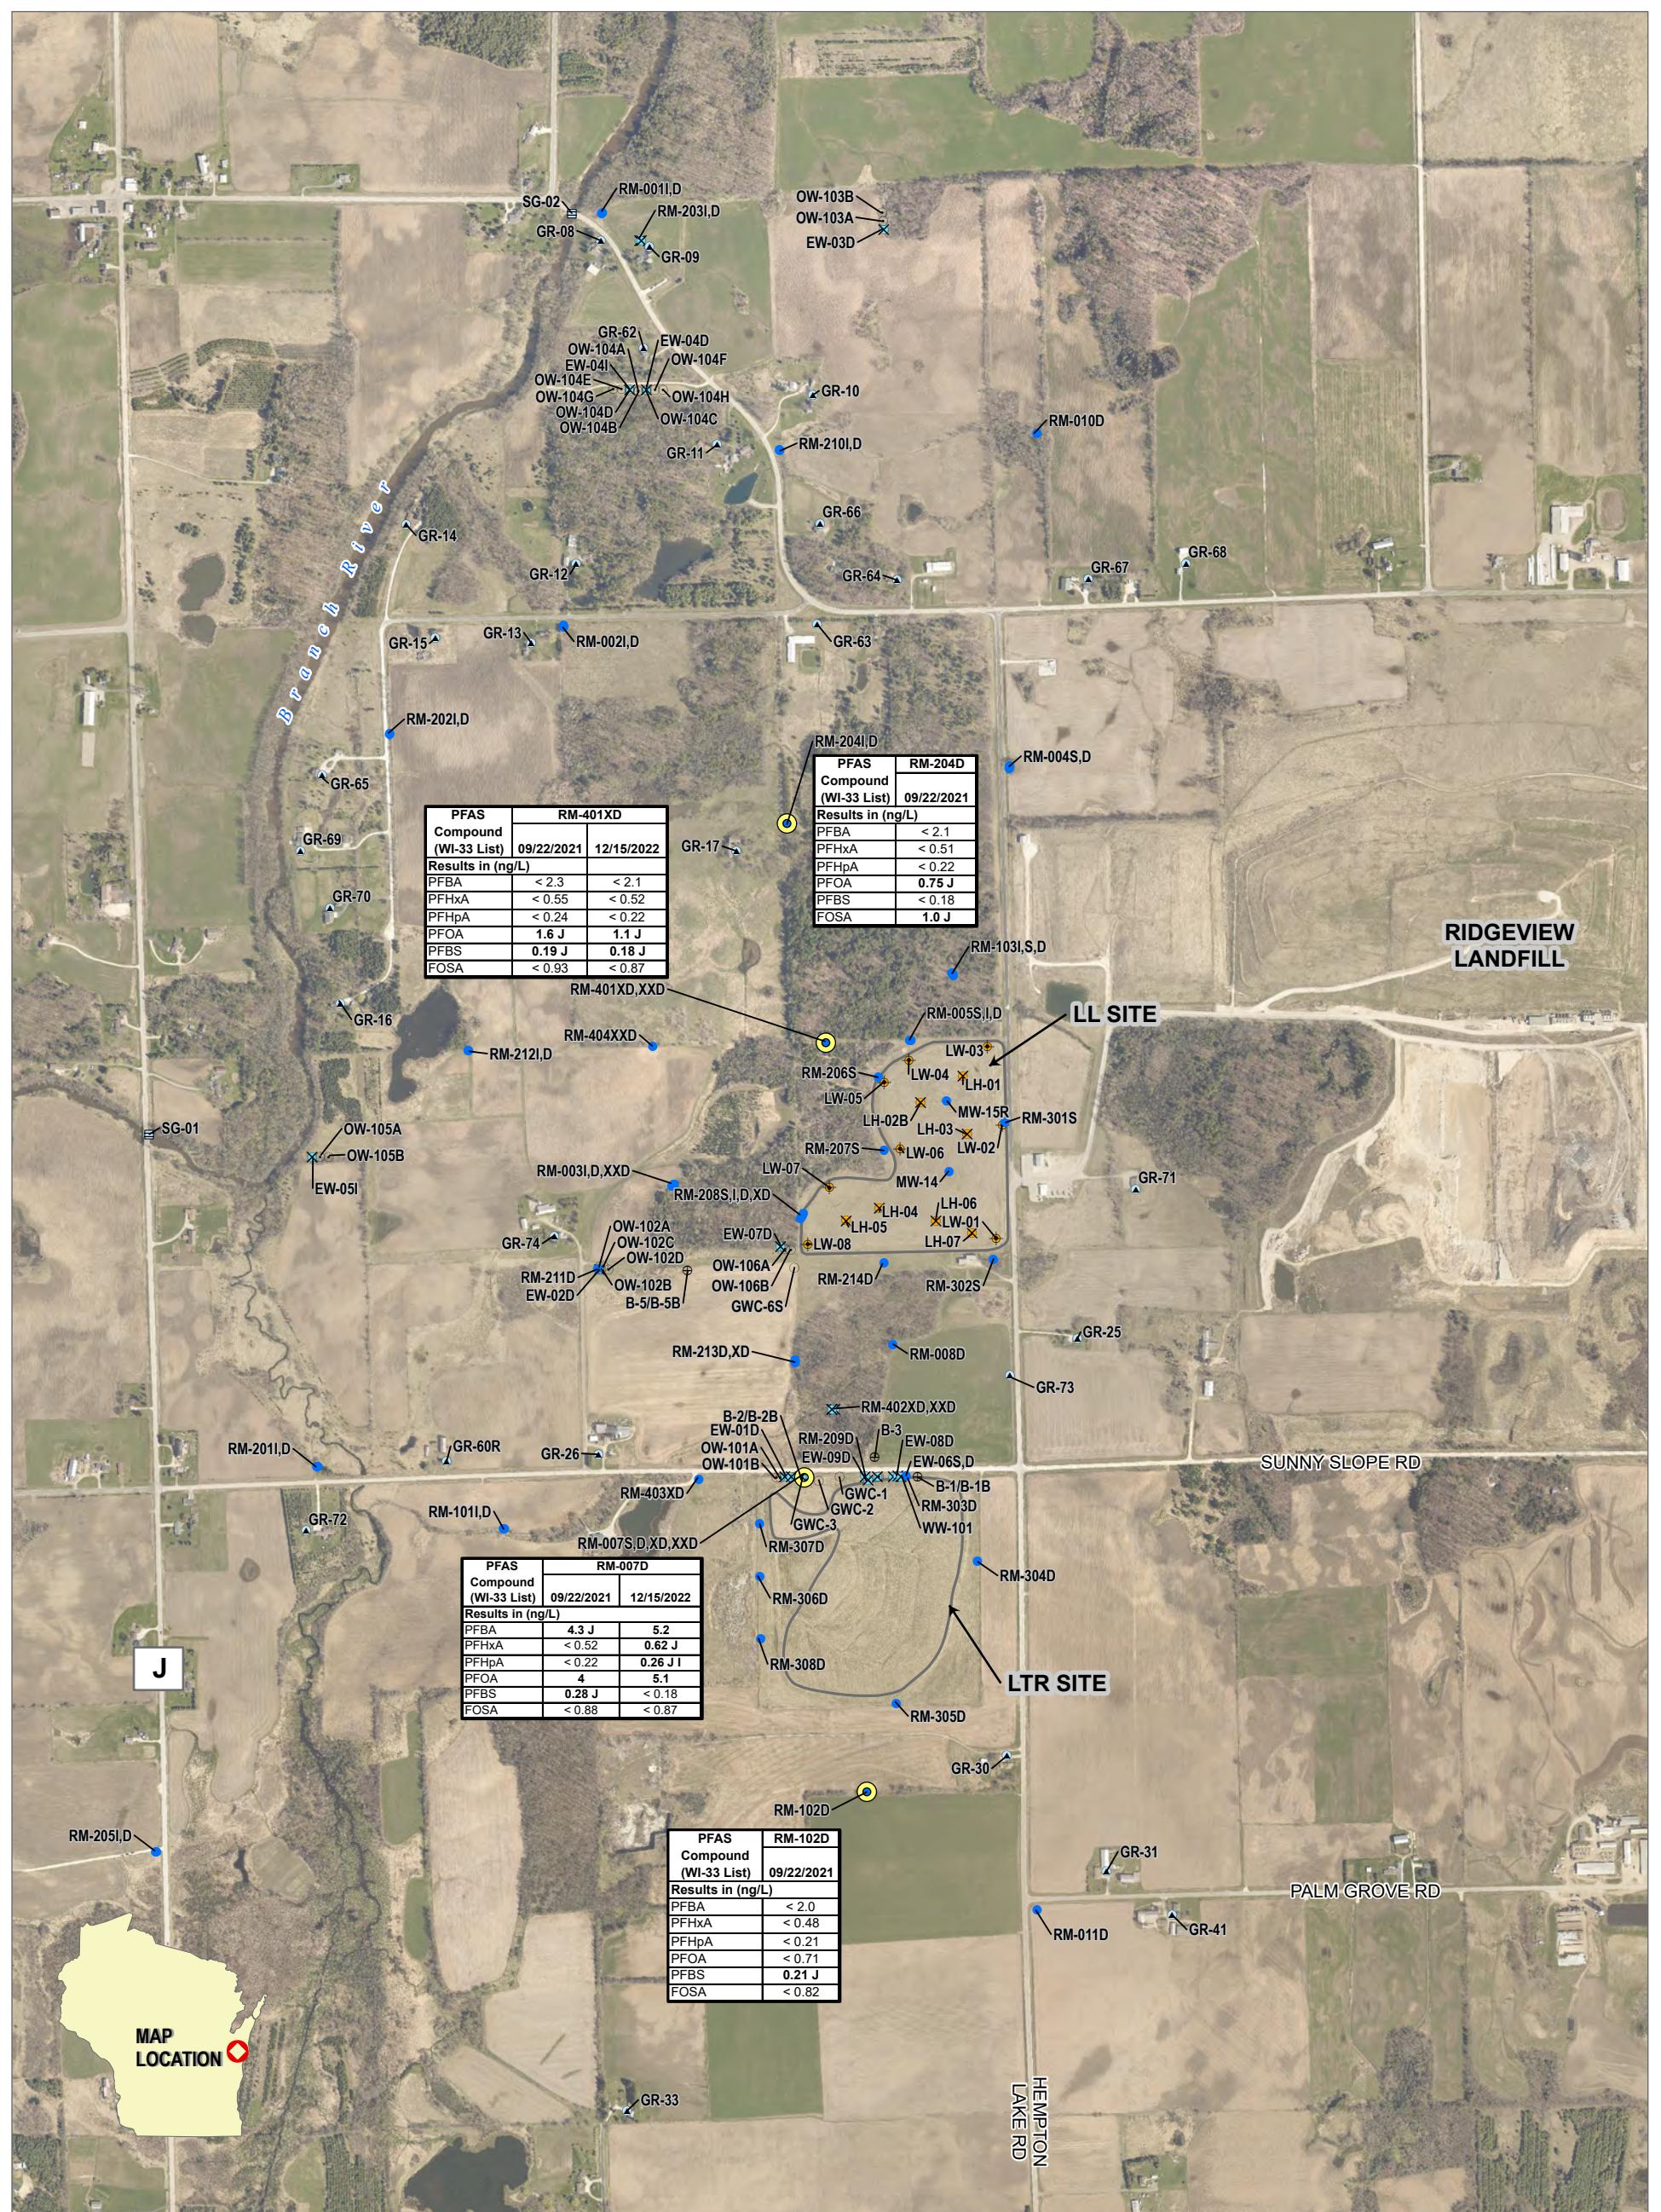

(i) DHS recommends a combined enforcement standard of 20 ng/L for FOSA, NEtFOSE, NEtFOSA, NEtFOSAA, PFOS, and PFOA.

(ii) USEPA recommended Lifetime Drinking Water Health Advisory (HAS) of 70 parts per trillion (ppt) (0.07 ng/L) for PFOA and PFOS combined or individually.

PAL = Wisconsin Administrative Code (WAC) Chapter NR140 Preventive Action Limit.

ES = WAC Chapter NR140 Enforcement Standard.

NR = No recommended standard yet from Cycles 10 or 11.

The Data Validation Report and Laboratory Data Sheets

Memorandum

To: Meredith Westover

From: Kristen Morin (Data Reviewer)
Liz Denly (Peer Reviewer)

Date: February 10, 2023

Subject: Data Validation Report
PFAS Groundwater Samples: 4th Quarter 2022
Lemberger Landfill and Lemberger Transport and Recycling/Franklin, Wisconsin
Laboratory Job Number 500-227062-1 (Revision 1)

SUMMARY

Full validation (stage 4) was performed on the data for two groundwater samples, one field duplicate, one field blank, and one equipment blank collected at the Lemberger Landfill and Lemberger Transport and Recycling Site in Franklin, Wisconsin. The samples were collected on December 15, 2022. Samples were submitted to Eurofins-Test America in West Sacramento, California for analysis. The samples were analyzed for per- and polyfluoroalkyl substances (PFAS) based on EPA Method 537.1 (modified). The laboratory reported the results under laboratory job number 500-227062-1 (Revision 1).

The sample results were assessed using the following guidance, modified for the methodology used:

- USEPA National Functional Guidelines for Organic Superfund Methods Data Review (EPA-540-R-20-005), November 2020
- USEPA National Functional Guidelines for High Resolution Superfund Methods Data Review (EPA-542-R-20-007), November 2020
- USEPA Data Review and Validation Guidelines for PFAS Analyzed Using EPA Method 537 (EPA 910-R-18-001), November 2018
- The project-specific quality assurance project plan (QAPP), dated October 2022, Revision 0

In general, the data are valid as reported and may be used for decision-making purposes. The following issues were noted which have a minor impact on the data usability:

- Select results were reported which were below the lowest calibration standard and quantitation limit (QL); these results were qualified as estimated (J).
- The positive result for PFHpA in sample RM-007D was qualified as estimated (J) due to the ratio between the two precursor/product ion transitions being outside the acceptance limits and detection below the QL.

SAMPLES

Samples included in this review are listed below:

- RM-007D
- RM-401XD
- FDUP-002 (Field duplicate of RM-007)
- FB-002
- AMB-001

REVIEW ELEMENTS

Sample data were reviewed for the following parameters:

- Agreement of analyses conducted with chain-of-custody (COC) requests
- Data completeness
- Holding times and sample preservation
- Initial and continuing calibrations
- Blanks
- Isotopically labeled surrogate results
- Matrix spike/matrix spike duplicate (MS/MSD) results
- Laboratory control sample/laboratory control sample duplicate (LCS/LCSD) results
- Internal standard performance
- Field duplicate results
- QLs and sample results
- Target compound identification

DISCUSSION

Agreement of Analyses Conducted with Chain-of-Custody Requests

Sample reports were checked to verify that the results corresponded to analytical requests as designated on the COC. No issues were noted.

Data Completeness

The data package was found to be complete as received from the laboratory with one exception. The initial calibration percent error values were incomplete for ADONA on Form VI. The laboratory was contacted during validation and provided a revised report to correct this issue.

Holding Times and Sample Preservation

All samples were analyzed within the method-specified holding time. All samples were received by the laboratory on ice and were properly preserved.

Initial and Continuing Calibrations

The percent relative standard deviations and percent error values were within the laboratory acceptance criteria in the initial calibration. The percent differences met the laboratory acceptance criteria in the continuing calibration standards associated with the samples in this data set.

Blanks

Target compounds were not detected in the associated method blank, field blank (AMB-001), and equipment blank (FB-002).

Isotopically Labeled Surrogate Results

Twenty-five (25) isotopically labeled surrogates were spiked into the samples prior to extraction for isotope dilution quantitation. The following table summarizes the percent recoveries (%Rs) that were not within the laboratory acceptance criteria, the affected samples, and the validation actions.

Sample ID	Isotopically Labeled Surrogate	%R	%R Limits	Validation Actions
FDUP-002	M2-4:2 FTS	163	25-150	No validation actions were required on this basis since 4:2 FTS was not detected in samples FDUP-002, FB-002, and AMB-001.
FB-002		156		
AMB-001		159		

MS/MSD Results

MS/MSD analyses were not performed on a sample in this data set.

LCS/LCSD Results

An LCS and LCSD were performed with each extraction batch. The %Rs and relative percent differences (RPDs) were within the laboratory acceptance criteria.

Internal Standard Performance

The isotopically labeled internal standard 13C2-PFOA was added to each sample prior to injection to monitor for ion suppression/enhancement at the instrument level. The %Rs met the laboratory limits of 50-150% in the PFAS analyses.

Field Duplicate Results

Samples RM-007D and FDUP-002 were submitted as the field duplicate pair with this data set. The following table summarizes the absolute differences (AbsDs) of the detected PFAS results in the field duplicate pair and the validation actions.

Criteria:

- When both results are $\geq 5x$ the QL, RPDs must be $\leq 30\%$.
- When one or both results are $< 5x$ the QL, AbsD must be $<$ the QL.

Analyte	QLs (ng/L)	RM-007D (ng/L)	FDUP-002 (ng/L)	AbsD (ng/L)	Validation Actions
PFBA	4.4/4.2	5.2	4.7	0.5	None; all criteria were met.
PFHxA	1.8/1.7	0.62 J	1.7 U	1.08	
PFHpA	1.8/1.7	0.26 J	1.7 U	1.44	
PFOA	1.8/1.7	5.1	5.4	0.3	

Quantitation Limits and Sample Results

Select results were reported which were below the lowest calibration standard level and QL. These results were qualified as estimated (J) by the laboratory.

There were no dilutions performed on the samples in this data set.

The laboratory's method detection limits for all PFAS were below both of the project action limits specified in the PFAS Evaluation Work Plan (proposed Wisconsin Department of National Resources Cycle 10 and 11 standards: Wisconsin Administrative Code [WAC] Chapter NR 140 Preventive Action Limit and WAC Chapter NR 140 Enforcement Standard).

Target Compound Identification

Extracted ion chromatograms were reviewed to verify the target compound identifications. The laboratory manually integrated several peaks to ensure the inclusion of linear and branched isomers for PFOA, PFOS, NEtFOSAA, NMeFOSAA, and/or PFHxS; and/or to ensure proper integration of all PFAS.

Two precursor/product ion transitions were used for identification for all compounds except for PFBA, PFPeA, PFOSA, N-MeFOSE, N-EtFOSE, F-53B Major, and F-53B Minor which only used one precursor/product ion transition for identification.

The following table summarizes the ratios between the two precursor/product ion transitions for positive results that did not meet the laboratory acceptance criteria and the validation actions.

Sample ID	Compound	Ratio	Ratio QC Limits	Validation Actions
RM-007D	PFHpA	6.29	1.85-5.56	The positive result for PFHpA in sample RM-007D was already qualified as estimated (J) by the laboratory due to detection below the lowest calibration standard; thus no further qualification was required.

ANALYTICAL REPORT

PREPARED FOR

Attn: Meredith Westover
TRC Environmental Corporation
999 Fourier Drive, Suite 101
Madison, Wisconsin 53717

Generated 1/9/2023 12:53:07 PM

JOB DESCRIPTION

Lemberger Landfill

JOB NUMBER

500-227062-1

Eurofins Chicago

Job Notes

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to the NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. This report is confidential and is intended for the sole use of Eurofins Environment Testing North Central, LLC and its client. All questions regarding this report should be directed to the Eurofins Environment Testing North Central, LLC Project Manager who has signed this report.

Results relate only to the items tested and the sample(s) as received by the laboratory. The results, detection limits (LOD) and Quantitation Limits (LOQ) have been adjusted for sample dilutions and/or solids content.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Chicago Project Manager.

Comments

No additional comments.

Receipt

The samples were received on 12/16/2022 9:25 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 2.5° C.

LCMS

Method 537 (modified): The "I" qualifier means the transition mass ratio for the indicated analyte was above the established ratio limits. The qualitative identification of the analyte has some degree of uncertainty, and the reported value may have some high bias. However, analyst judgment was used to positively identify the analyte. RM-007D (500-227062-1)

Method 537 (modified): Isotope Dilution Analyte (IDA) recovery is above the method recommended limit for the following samples: FDUP-002 (500-227062-3), FB-002 (500-227062-4) and AMB-001 (500-227062-5). These samples were reanalyzed with concurring IDA recoveries. Quantitation by isotope dilution generally precludes any adverse effect on data quality due to elevated IDA recoveries.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep

Method 3535: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with preparation batch 320-641965.

Method: 3535_PFC

Matrix: Aqueous

320-641965

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Detection Summary

Client: TRC Environmental Corporation

Sample Summary

Client: TRC Environmental Corporation
Project/Site: Lemberger Landfill

Job ID: 500-227062-1

Lab Sample ID	Client Sample ID	Matrix	Collected	Received
500-227062-1	RM-007D	Water	12/15/22 12:08	12/16/22 09:25
500-227062-2	RM-401XD	Water	12/15/22 13:57	12/16/22 09:25
500-227062-3	FDUP-002	Water	12/15/22 00:00	12/16/22 09:25
500-227062-4	FB-002	Water	12/15/22 11:05	12/16/22 09:25
500-227062-5	AMB-001	Water	12/15/22 11:40	12/16/22 09:25

Client Sample Results

Definitions/Glossary

Client: TRC Environmental Corporation
Project/Site: Lemberger Landfill

Job ID: 500-227062-1

Qualifiers

LCMS	Qualifier	Qualifier Description
*5+		Isotope dilution analyte is outside acceptance limits, high biased.
I		Value is EMPC (estimated maximum possible concentration).
J		Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
D	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Creator: Her, David A

Question	Answer	Comment	
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A		1
The cooler's custody seal, if present, is intact.	True	2110710	2
Sample custody seals, if present, are intact.	N/A		3
The cooler or samples do not appear to have been compromised or tampered with.	True		4
Samples were received on ice.	True		5
Cooler Temperature is acceptable.	True		6
Cooler Temperature is recorded.	True	2.5 c	7
COC is present.	True		8
COC is filled out in ink and legible.	True		9
COC is filled out with all pertinent information.	True		10
Is the Field Sampler's name present on COC?	True		11
There are no discrepancies between the containers received and the COC.	True		12
Samples are received within Holding Time (excluding tests with immediate HTs)	True		13
Sample containers have legible labels.	True		14
Containers are not broken or leaking.	True		15
Sample collection date/times are provided.	True		16
Appropriate sample containers are used.	True		
Sample bottles are completely filled.	True		
Sample Preservation Verified.	N/A		
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True		
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True		
Multiphasic samples are not present.	True		
Samples do not require splitting or compositing.	True		
Residual Chlorine Checked.	N/A

Eurofins Chicago

Isotope Dilution Summary

Client: TRC Environmental Corporation

Project/Site: Lemberger Landfill

Job ID: 500-227062-1

PFDA = 13C2 PFDA

PFUnA = 13C2 PFUnA

PFDoA = 13C2 PFDoA

PFTDA = 13C2 PFTeDA

C3PFBS = 13C3 PFBS

PFHxS = 18O2 PFHxS

PFOS = 13C4 PFOS

PFOSA = 13C8 FOSA

d3NMFOS = d3-NMeFOSAA

d5NEFOS = d5-NEtFOSAA

dMeFOSA = d-N-MeFOSA-M

dEtFOSA = d-N-EtFOSA-M

NMFM = d7-N-MeFOSE-M

NEFM = d9-N-EtFOSE-M

M242FTS = M2-4:2 FTS

M262FTS = M2-6:2 FTS

M282FTS = M2-8:2 FTS

HFPODA = 13C3 HFPO-DA

M102FTS = 13C2 10:2 FTS
