Subject: Status Update of Closure Request
Historic Spills by SpecialtyChem at the Tyco Fire Products LP – Ansul Facility
Marinette, Wisconsin
WDNR BRRTS # 02-38-000186

Dear Mr. Klauk:

LANXESS Corporation (LANXESS) submitted a request for closure for BRRTS #02-38-000186 to Wisconsin Department of Natural Resources (WDNR) on May 10, 2012. WDNR responded to LANXESS in a letter dated June 19, 2012 denying closure and requesting that LANXESS take further action, including collection of additional groundwater samples from specific site monitoring wells and issuance of written notice to Tyco (the property owner) per Section NR 726.05(2)(b)4, Wis. Adm. Code. On behalf of LANXESS, and as specified in WDNR's June 19, 2012 letter, TRC Environmental Corporation has prepared this letter to confirm that the necessary requirements for closure have been met and to once again request that WDNR grant closure for the specific referenced historic spill locations identified herein.

Background

As described in detail in the May 2012 Closure Request submittal, the Tyco Fire Products LP (Tyco) facility is a complex site with a long history of chemical manufacturing. This spills closure request only applies to a small portion of this much larger entity. During our conference call with WDNR following closure denial in 2013, it was evident that there was confusion within the closure committee as to the project status within the various entities involved. We wish to clarify LANXESS' involvement:

Mr. Robert H. Klauk
Wisconsin Department of Natural Resources
October 16, 2014
Page 2

- The spills covered by the May 10, 2012 closure request occurred over a period of approximately six years (1987-1993) when SpecialtyChem (and a subsidiary – ChemDesign), a lessee of certain buildings at the facility, was owned by the Bayer Corporation. Spill response actions taken by SpecialtyChem at the time of each spill event included stopping the source of the release, use of absorbent pads and/or materials to clean up released material, and hand excavation of impacted media where appropriate. In 2004, LANXESS purchased Bayer Corporation's chemical manufacturing operations that included liability for the SpecialtyChem spills from the period 1987-1993.
- There are currently 22 spills associated with SpecialtyChem currently listed as Open by WDNR and each have an identification number in BRRTS. Each of these spill locations are discrete, limited areas within the footprint of the property. This closure request is for a No Further Action (NFA) determination for Historic Spills as described in the WDNR document *Understanding Historic Spills* (ReNews September 2009). Each of these spills are summarized in Table 1 (attached).
- Previously, the Spills Coordinator for the project, Mr. Jason Moeller, suggested BRRTS #02-38-000186 be used to as a “catch all” for these historic spills to avoid duplication of efforts (i.e. issuance of a separate NFA for each spill). This may have led to some confusion. It was LANXESS’ intent to obtain a NFA determination for the 22 historic spills and it is unclear if obtaining closure under NR726 is required in this case.
- The facility is currently owned by Tyco and has been in operation in various capacities for 100 years. Many of the same chemicals associated with the 22 historic SpecialtyChem spills were also used at other locations on the site, by other entities, over many years. Constituents of concern at the site include metals (including arsenic) and volatile organic compounds (VOCs). LANXESS is not responsible for the impacts at the site that are not related to the 22 discrete, historic SpecialtyChem spills.
- According to records reviewed by TRC, Tyco worked closely with WDNR and spent approximately \$17M to address groundwater contamination at the facility that included:
 - construction of 4,500 linear feet of slurry and sheet pile walls that completely encompass the facility (including the SpecialtyChem spill areas) to prevent off-site migration of contaminated groundwater to adjacent properties and the river,

Mr. Robert H. Klauk
Wisconsin Department of Natural Resources
October 16, 2014
Page 3

- planting of over 700 trees in three phytoremediation areas, and
- installation of a groundwater pump-and-treat system within the containment area.

We further understand that Tyco has implemented deed restrictions and institutional controls as part of the remediation process for the site that restrict groundwater use, limit the use of the property, and require operation and maintenance of the remedial system, including the groundwater control system (cutoff wall and groundwater pumping system) and surface pavement.

LANXESS issued an “Appendix A” letter dated January 28, 2013 that notified Tyco Fire Protection Products (the site owners) of their responsibilities to maintain existing containment measures (including barrier walls and impervious surfaces) in support of the Cover Maintenance Plan (see Attachment G.4 of the Closure Request). WDNR was copied on the letter. The letter also:

- Informed Tyco that temporary well TW-2 was covered during remedial activity and must be abandoned, if located in the future.
- Confirmed that Tyco must maintain existing paved surfaces throughout the property.
- Confirmed that Tyco must maintain the property as an industrial property.

To our knowledge, all of the requirements specified in the Appendix A letter are consistent with how Tyco presently manages (and must continue to manage) the property under its site-wide RCRA corrective action program. Tyco did not respond to LANXESS regarding the January 28, 2013 “Appendix A” letter.

Groundwater Monitoring Results

TRC, on behalf of LANXESS, has completed the groundwater sampling requested by WDNR as part of the closure denial dated June 19, 2012 and subsequent discussions with the agency. TRC collected groundwater samples from MW-11S, MW-41S, MW-45S, MW-45M, and TW-1 on August 28, 2014. Samples were analyzed by Pace Analytical Services, Inc. (Pace) for volatile organic compounds (VOCs) by EPA Method 8260. Analytical results were received on September 4, 2014 are discussed below and included as Attachment 1.

Table 2 summarizes the concentrations of VOCs detected in the groundwater. Figure 1 shows the locations of the monitoring wells and the spill areas referred to in the Closure Request. Constituents detected in groundwater that may be related to the spills are: 1,2-dichlorobenzene, methylene chloride, toluene, and xylenes. Constituents detected in groundwater at the site not related to the 22 historic spills include chlorinated volatile organic compounds (CVOCs) such as cis 1,2-dichloroethene (DCE), ethylbenzene, trichloroethene (TCE), and vinyl chloride (VC) and fuel-related aromatics (benzene, toluene, and ethylbenzene). The results from the August 2014 monitoring are summarized as follows:

- **MW-11S** – This well was last sampled in 2000 and is adjacent to Spill Area N, which included two spills of methylene chloride and one of xylenes. Neither compound was detected in 2000 or 2014. Non-spill related VOCs detected include benzene, chlorobenzene, 1,2-dichlorobenzene, 1,4-dichlorobenzene, and toluene.
- **MW-41S** – This well was sampled nine times over a 14 year period. The well is in proximity to methylene chloride and xylene spill areas H and I. Groundwater sample results have shown decreasing concentrations of methylene chloride (560 µg/L in 2000 to 7.9J µg/L in 2014). Xylenes have also decreased from a maximum concentration of 14,640 µg/L in 2011 to 5,780 µg/L in 2014. Other (non-spill related) compounds showing decreasing concentrations include 1,2-dichlorobenzene, chlorobenzene, cis 1,2-DCE, ethylbenzene, toluene, TCE, and VC.
- **MW-45S** – This well is also located near the H and I (methylene chloride and xylenes) spill areas. Methylene chloride concentrations have decreased from 560 µg/L in 2000 to 26.1J µg/L in 2014. Xylenes have also decreased from a maximum concentration of 7,990 µg/L in 2010 to 4,360 in 2014. Many other (non-spill related) VOCs in groundwater from this well have also decreased including 1,2-dichlorobenzene, cis-1,2 DCE, ethylbenzene, toluene, TCE, and VC. Chlorobenzene, which is not related to the Area H and I spills, increased in concentration in this well.
- **MW-45M** – This well is the only medium (approximately 30 feet below ground surface) depth well sampled during this monitoring event. VOC concentrations at depth are generally lower than in monitoring wells screened in the shallow (S suffix) groundwater. Concentrations of methylene chloride have fluctuated between 69 µg/L and 140Q µg/L over the 14 year sampling period, and xylenes have been detected but at concentrations well below the ES (2,000 µg/L). Concentrations of other (non-spill related) VOCs have increased including: benzene, chlorobenzene, cis 1,2-DCE, toluene, TCE, and VC.

Mr. Robert H. Klauk
Wisconsin Department of Natural Resources
October 16, 2014
Page 5

- **TW-1** – this well is located near the center of Spill Area I where methylene chloride and xylenes are the primary constituents of concern. Concentrations of methylene chloride have remained below detectable limits since the well was installed in 2006. Xylene concentrations increased from 1,200 µg/L in 2006 to 65,400 µg/L in 2011, but decreased markedly in 2014 to 41.4 µg/L. Other (non-spill related) VOCs detected above the ES in this well include fuel-related components such benzene, ethylbenzene, and toluene – all of which showed increasing concentrations from 2006 to 2011. This suggests the xylene concentrations detected in this well may be partially associated with a release of fuel and are not related to the SpecialtyChem spills.

Analytical results from groundwater samples indicate concentrations of the constituents associated with the SpecialtyChem spills are stable-to-declining as expected with the age of the releases and natural attenuation of the constituents. Decreasing concentrations are likely to continue as contaminated groundwater within the containment area is withdrawn by transpiration and Tyco's operation of the groundwater extraction system and replaced by infiltrating precipitation.

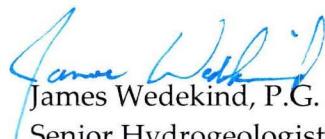

Closing and Recommendations

With submittal of the Appendix A letter to Tyco and completion of groundwater sampling described herein, LANXESS has completed the additional site work requested by WDNR to obtain NFA determination for these historic spills. With these actions we petition the WDNR to grant an NFA determination for these spills and that the site be listed on the WDNR Remediation and Redevelopment GIS Registry. LANXESS requests that the contents of this letter and the Appendix A letter previously forwarded to you, when combined with the information provided in the May 2012 Closure Request document, is sufficient to move this request forward without re-issue of the Closure Request document. Moreover, as the site-wide remedial action program implemented by Tyco is under the oversight of U.S. EPA and WDNR, it is designed to remain effective going forward and operation and maintenance of the remedial systems is assured.

Mr. Robert H. Klauk
Wisconsin Department of Natural Resources
October 16, 2014
Page 6

We thank you for your consideration of this matter. If you have any questions that could impact the NFA determination of these spills, please contact me at your earliest convenience.

Sincerely,
TRC Environmental Corporation

James Wedekind, P.G.
Senior Hydrogeologist

Spill Summary and Recommendations

BRRTS (RFI) SPILL NUMBER	DATE	INCIDENT	AMOUNT RELEASED	CLEANUP ACTIVITY DESCRIBED IN THE SPILL REPORT OR SPECIALTYCHEM COMMUNICATIONS	REGULATORY EXCEEDENCES FOR SPILLED COMPOUND		DISCUSSION	RECOMMENDATION
					SOIL	GROUNDWATER		
Vapor-Phase Releases								
04-38-043038 NA	8/18/1988	Methylene chloride release	200 lb	Not described	NS	NS	Compound dissipated to atmosphere.	Spill closure
04-38-052133 (11)	11/9/1988	Hydrogen chloride and sulfur dioxide release	100 lb HCl, 100 lb SO ₂					
04-38-043682 NA	5/15/1989	Steam with xylene and sulfuric acid	500 gal xylene					
04-38-043993 NA	8/21/1989	Sulfur dioxide release	40 - 50 lb					
04-38-044023 NA	8/28/1989	Sulfur dioxide release	2000 lb					
Acid Spill in Drum Storage Area								
04-38-043561 NA	4/9/1989	Hydrochloric acid spill	400 lb	Neutralized with sodium bicarbonate and picked up. Spill occurred on a concrete surface.	NS	NS	Reactive substance readily degraded in the environment.	Spill closure
Areas H & I – Still Building (Building 62)/Drum Storage Area/Building 38								
No BRRTS # (9)	8/23/1988	Xylene (methylamine) release and spill	Unknown	Not described.	Area H – Total xylenes (up to 14,100 mg/kg) exceed the RCL of 258 mg/kg	MW041 and MW045 – Xylenes (up to 14,640 µg/L) exceed the ES (2,000 µg/L) in MW041S.	The residual xylene that is present in the soil has caused a localized ES exceedence in the groundwater.	Spill closure due to containment measures and institutional controls.
04-38-042927 (7)	7/15/1988	Methylene chloride spill	35 gal	Absorbed and picked up.	Area I – Methylene chloride was detected in one sample at a concentration of 0.63 mg/kg, which is below the RCL of 14.6 mg/kg. No other detections were reported; however, the detection limits for the other samples were elevated.	MW041 and MW045 – Methylene chloride concentrations in the shallow and intermediate level groundwater exceed the ES. Concentrations have decreased in MW041S, but have increased in MW041M	Methylene chloride appears to be a site-wide issue, with methylene chloride ES exceedences present in 10 wells (MW004, MW005, MW010, MW029, MW033, MW041, MW044, MW045, MW050, and MW051). With the exception of MW041, MW044, and MW045, these wells are not downgradient from reported SpecialtyChem methylene chloride spills. Most notably, the methylene chloride concentration in the shallow groundwater at MW050 (2,700 µg/L), which is 800 feet sidegradient from the location of Spill No. 7, is higher than at MW041 and MW045.	Spill closure due to containment measures and institutional controls.

Spill Summary and Recommendations

BRRTS (RFI) SPILL NUMBER	DATE	INCIDENT	AMOUNT RELEASED	CLEANUP ACTIVITY DESCRIBED IN THE SPILL REPORT OR SPECIALTYCHEM COMMUNICATIONS	REGULATORY EXCEEDENCES FOR SPILLED COMPOUND		DISCUSSION	RECOMMENDATION
					SOIL	GROUNDWATER		
04-38-044170 (17)	10/25/1989	Xylene spill	25 gal	Absorbed and picked up.	Area I – Total xylenes (up to 10,300 mg/kg) exceed the RCL (258 mg/kg).	MW041 and MW045 – Xylenes (up to 14,640 µg/L) exceed the ES (2,000 µg/L) in MW041S.	The residual xylene that is present in the soil has caused a localized ES exceedence in the groundwater.	Spill closure due to containment measures and institutional controls.
04-38-045340 (21)	12/27/1990	Ortho xylene spill	15 gal	Absorbed and picked up.				
No BRRTS # (23)	3/6/1991	Ortho xylene spill	30 – 40 gal	Absorbed and picked up.				
No BRRTS # (26)	8/22/1991	Xylene spill	20 gal	Absorbed and picked up.				
Areas L & M – East of Buildings 83 and 84								
04-38-043872 (13)	7/11/1989	Toluene spill	10 gal	Contained/Recovered	Toluene detected in 7 of 10 samples. Maximum concentration of 3.2J mg/kg. RCL is 818 mg/kg.	GW008 – Toluene detected in GW008M at 0.48J µg/L. Concentration <3.6 µg/L in GW008S. ES is 800 µg/L.		Spill closure.
04-38-043986 (14)	8/18/1989	Hydrogen peroxide spill	20 gal	Diluted with water.	Area L – No hydrogen peroxide analyses.	GW008 – No hydrogen peroxide analyses performed on groundwater.	Hydrogen peroxide and sulfuric acid are reactive substances readily degraded in the environment. Area M - Soil pH ranges from 8.4 to 10.2, which does not indicate a significant acid release.	Spill closure.
No BRRTS # (2)	7/20/1987	Sulfuric acid spill	100 gal	Neutralized with limestone and picked up. Spill occurred on an asphalt surface.				
04-38-042830 (5)	6/9/1988	Sulfuric acid spill	400 lb	Neutralized with limestone and picked up. Spill occurred on an asphalt surface.				
04-38-042960 (8)	7/27/1988	Sulfuric acid spill	50 – 100 gal	Material contained on a roof. Pumped to a tank.				
Area N – South and West of Building 69								
04-38-042653 (4)	4/6/1988	Dimethyl formamide spill (DMF)	15 gal	Water pumped to treatment plant. Impacted soil to be removed.	Area N – No DMF was detected in soil.	GW044 – No DMF analyses conducted.	No detections of spilled constituent in soil.	Spill closure due to containment measures and institutional controls.
04-38-042923 (6)	7/14/1988	Methylene chloride spill	60 gal	Absorbed and picked up.	Methylene chloride concentrations near the reported spill locations ranged from nondetect to 0.022 mg/kg, which are below the RCL (14.6 mg/kg).	GW044 –Methylene chloride concentrations are consistently below the ES.	Elevated methylene chloride concentrations (2.0 mg/kg) are present in the soil to the south of Building 69; however, this is not near the two reported methylene chloride spills (No. 6 and No. 16).	Spill closure due to containment measures and institutional controls.

Table 1 (continued)
Spill Summary and Recommendations

BRRTS (RFI) SPILL NUMBER	DATE	INCIDENT	AMOUNT RELEASED	CLEANUP ACTIVITY DESCRIBED IN THE SPILL REPORT OR SPECIALTYCHEM COMMUNICATIONS	REGULATORY EXCEEDENCES FOR SPILLED COMPOUND		DISCUSSION	RECOMMENDATION
					SOIL	GROUNDWATER		
04-38-043130 (10)	9/21/1988	2-ethyl phenol spill	35 gal	Contained and recovered	2-ethyl phenol detected in 1 of 13 samples at 0.11 mg/kg.	GW044 – 2-ethyl phenol not detected.	No RCL for 2-ethyl phenol. No detections in groundwater and one detection near the detection limit suggest <i>de minimis</i> impact.	Spill closure.
04-38-044092 (16)	9/20/1989	Methylene chloride spill	35 gal	Absorbed and picked up with impacted soil.	Methylene chloride concentrations near the reported spill locations ranged from nondetect to 0.022 mg/kg, which are below the RCL (14.6 mg/kg).	GW044 – Methylene chloride concentrations are consistently below the ES.	Elevated methylene chloride concentrations (2.0 mg/kg) are present in the soil to the south of Building 69; however, this is not near the two reported methylene chloride spills (No. 6 and No. 16).	Spill closure due to containment measures and institutional controls.
04-38-044197 (18)	11/6/1989	Sodium hydroxide spill	150 gal	Neutralized and collected residue. Spill occurred on an asphalt surface.	No analysis performed.	No analysis performed.	Sodium hydroxide is a reactive substance readily degraded in the environment.	Spill closure.
04-38-045372 (22)	1/8/1991	Sodium hydroxide spill	200 lb	Neutralized and collected residue. Spill occurred on an asphalt surface.				
Area O – South of Building 70								
04-38-052213 (15)	8/22/1989	2,1,5 Diazo salt spill (NAS 5)	700 lb	Contained on an impervious surface and pumped to a dike and then a tank for final disposition. Spill occurred on an asphalt surface.	Area O – 2,1,5 Diazo salt is present at concentrations up to 25 mg/kg. There is no regulatory standard.	No analysis performed.	No regulatory standards for 2,1,5-diazo salt. Diazo salt is a solid at standard temperature and pressure, and is hazardous because of flammability.	Spill closure due to containment measures and institutional controls.
Areas P & Q – North and East of Building 52								
No BRRTS # (3)	2/2/1988	AP5 process wastewater spill (Xylene)	100 gal	Absorbed and picked up. Spill occurred on a concrete surface.	Area P – Total xylenes (up to 98 mg/kg) are below the RCL (258 mg/kg).	GW010 – Total xylenes in the shallow well (2,020 µg/L) exceed the ES (2,000 µg/L).	The residual xylene that is present in the soil has not caused ES exceedences in the groundwater.	Spill closure due to containment measures and institutional controls.
No BRRTS # (12)	3/9/1989	Methyl isobutyl ketone spill (MIBK)	5 – 10 gal	Absorbed and picked up. Spill occurred on a concrete surface.	Area P – MIBK detected in 1 of 12 samples (up to 0.730 mg/kg) does not exceed the RCL of 3,360 mg/kg.	GW010 – MIBK was not detected in the shallow groundwater. The concentration of MIBK in the mid-level well (10J µg/L) does not exceed the ES (500 µg/L).	No regulatory exceedences for MIBK at the source area. Exceedences of MIBK near Areas H and I suggest other sources present at the facility.	Spill closure due to containment measures and institutional controls.

Table 1 (continued)
Spill Summary and Recommendations

BRRTS (RFI) SPILL NUMBER	DATE	INCIDENT	AMOUNT RELEASED	CLEANUP ACTIVITY DESCRIBED IN THE SPILL REPORT OR SPECIALTYCHEM COMMUNICATIONS	REGULATORY EXCEEDENCES FOR SPILLED COMPOUND		DISCUSSION	RECOMMENDATION
					SOIL	GROUNDWATER		
04-38-045164 (19)	10/9/1990 (8/7/1990 – date listed in RFI and on WDNR spill report)	Orthodichlorobenzene (1,2-dichlorobenzene) spill	50 – 100 gal	Absorbed and picked up.	Area Q – 1,2 dichlorobenzene (up to 93 mg/kg) does not exceed the RCL of 376 mg/kg.	GW010 – 1,2-dichlorobenzene in shallow groundwater (2,900 µg/L) exceeds the ES (600 µg/L) 1,2-dichlorobenzene in the mid-level well (35 µg/L) is below the ES.	Elevated concentrations of 1,2-dichlorobenzene were found 300 to 400 feet upgradient from Spill No. 19 in the shallow groundwater at GW011 and in the mid-depth groundwater at GW012 (750 µg/L and 1,900 µg/L, respectively). An elevated concentration of 1,2-dichlorobenzene is also present in the shallow groundwater at GW045 (1,400 µg/L), which is located 750 feet sidegradient from GW010. None of these three wells (GW011, GW012, and GW045) is near a reported SpecialtyChem spill of 1,2-dichlorobenzene.	Spill closure due to containment measures and institutional controls.
No BRRTS # (24)	3/8/1991	Chloroacetaldehyde dimethyl acetal (CADMA) 97-97-2	10 gal	Absorbed and picked up.	Area Q - CADMA detected in two of 14 samples at 0.92 mg/kg and 24 mg/kg.	GW010 - No analyses for CADMA.	No regulatory standards for CADMA.	Spill closure.
04-38-046747 (27)	1/26/1992	Butyl alcohol spill (Butanol)	200 – 300 gal	Absorbed and picked up.	Area Q - No butyl alcohol analyses.	No analysis performed.	Reactive substance readily degraded in the environment.	Spill closure.

Notes:

NA = spill either a vapor or reactive chemical not assessed in RFI (URS, 2001).

NS = no regulatory standard.

⁽¹⁾ Spill numbers are based on the online WDNR BRRTS listing and the RFI (URS, 2001) spill closure list.

⁽²⁾ Chemical data for soil and groundwater were obtained from the RFI report for the Ansul facility (URS, 2001). Soil exceedences are based on comparison of the site data to current WDNR NR 720 Residual Contaminant Levels. Groundwater exceedences are based on a comparison of the site data to WDNR NR 140 Enforcement Standards (ESs).

Notes:

Q or J = the analyte was detected between the Limit of Detection (LOD) and the Limit of Quantitation (LOQ).

NA = not analyzed.

— = not available.

Bold = Indicates that the detected value exceeds the Enforcement Standard (ES).

PAL = WDNR Preventive Action Limit.

ES = Wisconsin Department of Natural Resources (WDNR) Enforcement Standard.

RE: Project: 194937 LANXESS
Pace Project No.: 40102439

Dear JAMES WEDEKIND:

Enclosed are the analytical results for sample(s) received by the laboratory on August 28, 2014. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Tod Noltemeyer

PROJECT NARRATIVE

Project: 194937 LANXESS
Pace Project No.: 40102439

Method: EPA 8260
Description: 8260 MSV
Client: TRC - MADISON
Date: September 03, 2014

General Information:

6 samples were analyzed for EPA 8260. All samples were received in acceptable condition with any exceptions noted below.

pH: Post-analysis pH measurement indicates insufficient VOA sample preservation.
• MW-45M (Lab ID: 40102439002)

Hold Time:

The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):

All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:

All criteria were within method requirements with any exceptions noted below.

Internal Standards:

All internal standards were within QC limits with any exceptions noted below.

Surrogates:

All surrogates were within QC limits with any exceptions noted below.

Method Blank:

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:

All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

Additional Comments:

This data package has been reviewed for quality and completeness and is approved for release.

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,

without the written consent of Pace Analytical Services, Inc..

QUALIFIERS

Project: 194937 LANXESS
Pace Project No.: 40102439

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

LOD - Limit of Detection.

LOQ - Limit of Quantitation.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

pH Post-analysis pH measurement indicates insufficient VOA sample preservation.
